

Advanced Zones Tab - Zone Editor / Creating Zones from Data Layer

The **Zone Editor** tab provides functions for creating and editing data zones. To activate the options, select the **Advanced Zones** tab.

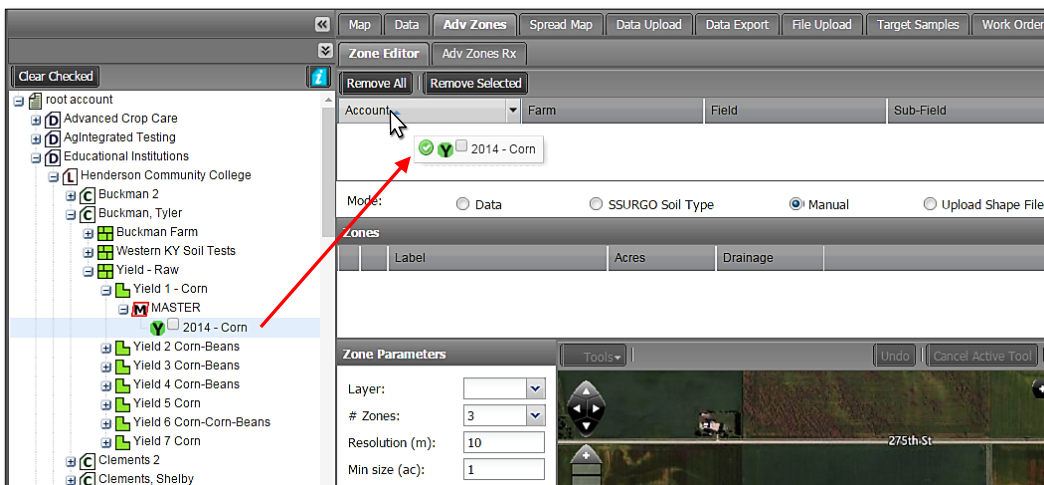

1. The **Zone Editor** tab will display immediately.

- A. This function allows you create zones from nearly any data layer, plus edit the zones, look at underlying data layers via an opacity slider, then save the zones to your profile tree.

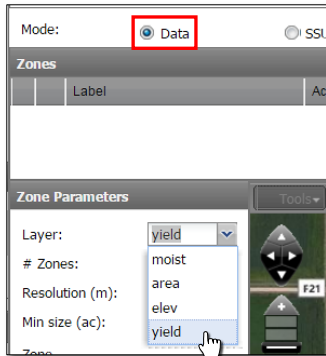

2. **Creating Zones from Data Layers.**

- A. From the customer index window, click and hold a **data** file (soil / yield) and drag up to the **Account** window.
 - The boundary will appear in the map window.

- B. In the **Zone Parameters** area, use the Layer drop-down to pick the desired data layer.
 - A **Loading layer data** status indicator will appear.

Note: This function allows any data layer to be entered (yield / soil / imagery / as-applied, zones, etc.).

- Once completed, the visual data map will display (right).

- C. The zone breaks will appear, showing the zone value ranges (below). Users have the option to manually enter zone breakpoints, or go with the calculated ranges.

- To manually change the breakpoint values, click in the **Between** value boxes and enter the desired values (right).
- Once the zone values are set, click on **Generate Zones** (left).
- A **Generating zones...** notification will display (right).
- When finished, the zones will display (below).

- Note the created zones will be named and displayed.
- Users can use the editing tools to make adjustments to the generated zones. See the tutorial on Modifying Zones for details.

D. Renaming Zones: I.F.A.R.M. offers the means to rename zones.

- If a user wants to rename the zones to something specific, click within the zone name label area.
- Highlight the entire name, or just the area to be renamed and type in the new entry.

Zones		
	Label	Acres
<input checked="" type="checkbox"/>	Zone 1 [130 - 240]	57.04
<input type="checkbox"/>	Zone 2 [240 - 248]	19.00
<input type="checkbox"/>	Zone 3 [248 - 275]	69.70

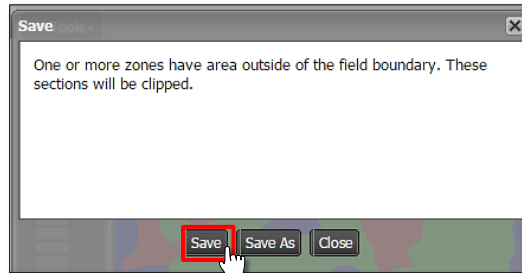

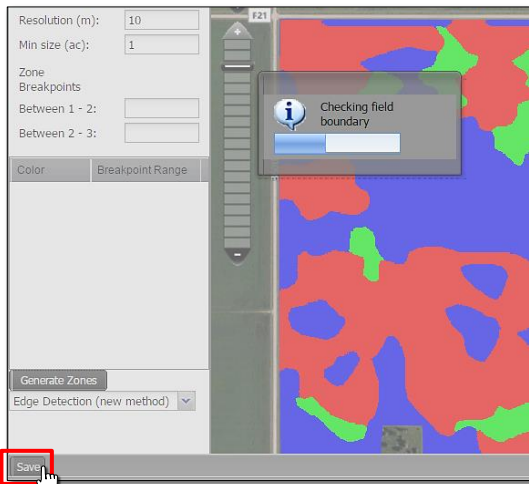

Zones		
	Label	Acres
<input checked="" type="checkbox"/>	Low Yield [130 - 240]	57.04
<input type="checkbox"/>	Zone 2 [240 - 248]	19.00
<input type="checkbox"/>	Zone 3 [248 - 275]	69.70

Zones		
	Label	Acres
<input type="checkbox"/>	Low Yield [130 - 240]	57.04
<input type="checkbox"/>	Med Yield [240 - 248]	19.00
<input checked="" type="checkbox"/>	High Yield [248 - 275]	69.70

- Continue using this process until the zones are name as desired.

E. Saving Zones: It is advisable at this point to save the zone to the field profile tree.

- Click on the **Save** button. A **Checking field boundary** status box will appear (below).
- If any zone is detected to be outside the boundary, a notification will appear stating the zones will be clipped to the boundary upon saving (right).

- Click on the **Save** button. A naming prompt will appear.
- Name the zone specifically so it is easily identified under the field. Click **OK** when finished.

- A **Saving Dataset** status bar will show (below), followed by a **Success** confirmation notice (below right).

- The saved zone will now reside under the field in the profile tree, shown as a purple "Z" icon.
