

Spread Map Tab - Soil Zones - Save Application

1. **Save Application.** This feature allows you to save a specific soil zone application for a field. This proves to be a time-saving and convenient way to archive what was done for specific fields.

A. With all field conditions / parameters entered, click on the **Save Application** button in the lower window.

B. **Script Prompt** window appears allowing you to name the application. Type in the desired name and click the **OK** button.

- An indicator will appear briefly showing the application is saving.

- After a few seconds, a notice indicator will appear (right) confirming the **Soil Zone Application has been saved.**

C. The saved application will now be visible under the field as a **red** circle with a **SZ** inside (soil zone).

Note: This feature is convenient if you want to recall what was done for a given field. You can pull up a saved field and re-run reports / files as needed.

Multiple Saved Applications can be saved under the field.

Remove the **Most Recent** only filter to see all Saved Applications (left).

D. By right clicking on the **red** application file, you will get the option to **Load** or **Delete** the application.

- If you click on **Load Application**, the full soil zone setup parameters will populate with the saved criteria.

E. To **Delete** a saved application, right click on the application. Click on **Delete Application**.

- A **Confirm Delete** indicator will appear. If you wish to proceed with deleting the saved application, select **OK**.

- The saved application will be removed immediately from the field.
