NiceLabel Training Sessions – Product Training

The goal of individual training sessions is to educate end users and partners about NiceLabel products. Each training session covers a specific NiceLabel 2017 product or module. Read the session overview carefully to understand what part of labeling process is covered with each session. This will help you decide which training session is the optimal choice for your company role.

Delivery and Duration

Sessions are delivered online via GoToMeeting.

Duration of a single session is 4 hours.

Available Sessions

Session 1 – Level 100

Label Design – Designer 2017

Session 2 – Level 200

On-demand Printing Solutions – PowerForms

Session 3 – Level 200

Document Management System and Web printing: LMS – Control Center

Session 4 – Level 200

Integrated Printing Solutions – Automation

Custom Training

Agenda and materials for custom training sessions are defined according to specific requirements of attendees.

Levels

Level of difficulty is assigned to each training session. It helps you estimate prior knowledge level about NiceLabel products that is required to take part in the training session and to understand it.

Level 100 indicates an introductory training session for all who are new to NiceLabel products. No prior NiceLabel-related knowledge is necessary.

Level 200 indicates that prior understanding of NiceLabel product structure and roles is necessary. It is highly recommended that entry level training is completed before signing up for level 200.

Training Session 1

Label Design – Designer 2017

Product code: NLTS01004H

- Level: 100
- Duration: 4 hours
- Prerequisites: no prior NiceLabel-related knowledge is necessary

This training session type is optimal for users with label design role.

Learn how to design labels using NiceLabel Designer. Attendees of this session gain knowledge on how to use label objects with various data sources, how to configure properties and settings, and how to optimize printing experience.

Agenda

Introduction to NiceLabel Designer

Label Design

- Getting familiar with user interface
- Learning how to create and manage label objects (single/multiline text, barcodes, pictures)
- Getting familiar with object properties
- Learning how to minimize the number of label templates using dynamic data sources
- Learning how to manage database connectivity and data printing from databases
- NiceLabel Designer demonstration – standard case label design

Printing – optimizing printing process using printing forms and NiceLabel Print

Q & A

Training Session 2

On-demand Printing Solutions – PowerForms

Product code: **NLTS02004H**

- Level: 200
- Duration: 4 hours
- Prerequisites: label design knowledge recommended

This training session is optimal for users who plan to develop PowerForms printing solutions.

Learn how to build tailored label printing applications and optimize on-demand printing using NiceLabel PowerForms application builder. In this session, attendees gain basic knowledge on how to create efficient PowerForms user interfaces by using prebuilt objects. They also learn how to use actions to include logic and workflows in their applications.

Agenda

Introduction to PowerForms Application Builder

- What is a PowerForm application?
- Why use PowerForms applications?
- Typical applications

PowerForms Application Design

- Getting familiar with workspace and solution building
- Key PowerForms elements:
 - User interface objects – how to build user interface
 - Events and actions – how to include logic and workflows
- NiceLabel Designer demonstration: building basic PowerForms applications

Q & A

Training Session 3

Document Management System and Web Printing: LMS – Control Center

Product code: **NLTS03004H**

- Level: 200
- Duration: 4 hours
- Prerequisites: label design knowledge recommended

This session is optimal for label management system (LMS) administrators.

Learn how to use and administer centralized document management system and leverage its features to improve labelling process and to reduce its costs. In this session, attendees learn how to centrally manage users, documents, and printing solutions to improve efficiency, agility, and quality in a multi-user labelling environment.

Agenda

Introduction to Label Management System (LMS)

- What is LMS?
- Why LMS?
- NiceLabel LMS architecture
- Installation and licensing
- Role Based Access Fundamentals

Document Management

- Secure centralized document storage
- Document versioning
- Approval and publishing workflows

Web Printing

- Introduction
- Provisioning printing applications using web printing

Other

- Print history & Alerts
- Reports
- Printer management

Q & A

Training Session 4

Integrated Printing Solutions – Automation

Product code: **NLTS04004H**

- Level: 200
- Duration: 4 hours
- Prerequisites: label design knowledge recommended

Optimal for users who plan to build integration configurations using NiceLabel Automation.

Learn how to integrate printing with business systems or hardware devices. In this session, attendees gain basic knowledge on how to build efficient integrations with NiceLabel Automation by using prebuilt connectors. They also learn how to process various data structures, and how to use actions to include logic and workflows in their integrations.

Agenda

Introduction to Automation Integration Platform

- Why Integration?
- NiceLabel Automation architecture
- Typical integrations and business systems

Building and Deploying Integrations

- Getting familiar with integration building environment – Automation Builder
- Key elements and how to use them to configure integrations:
 - Triggers – business connectors
 - Filters – data parsing and processing with CSV, XML and unstructured filter
 - Actions and workflows
- Getting familiar with integration management environment – Automation Manager
- Automation demonstration – building and deploying integrations

Q & A

Custom Training Sessions

Product code: **NLTPTRXXXH**

Agenda and materials for custom training sessions are defined separately for each occasion. At NiceLabel, we guarantee that each participant takes part in a customized training session based on specific requirements. This type of training session is completely adaptable.

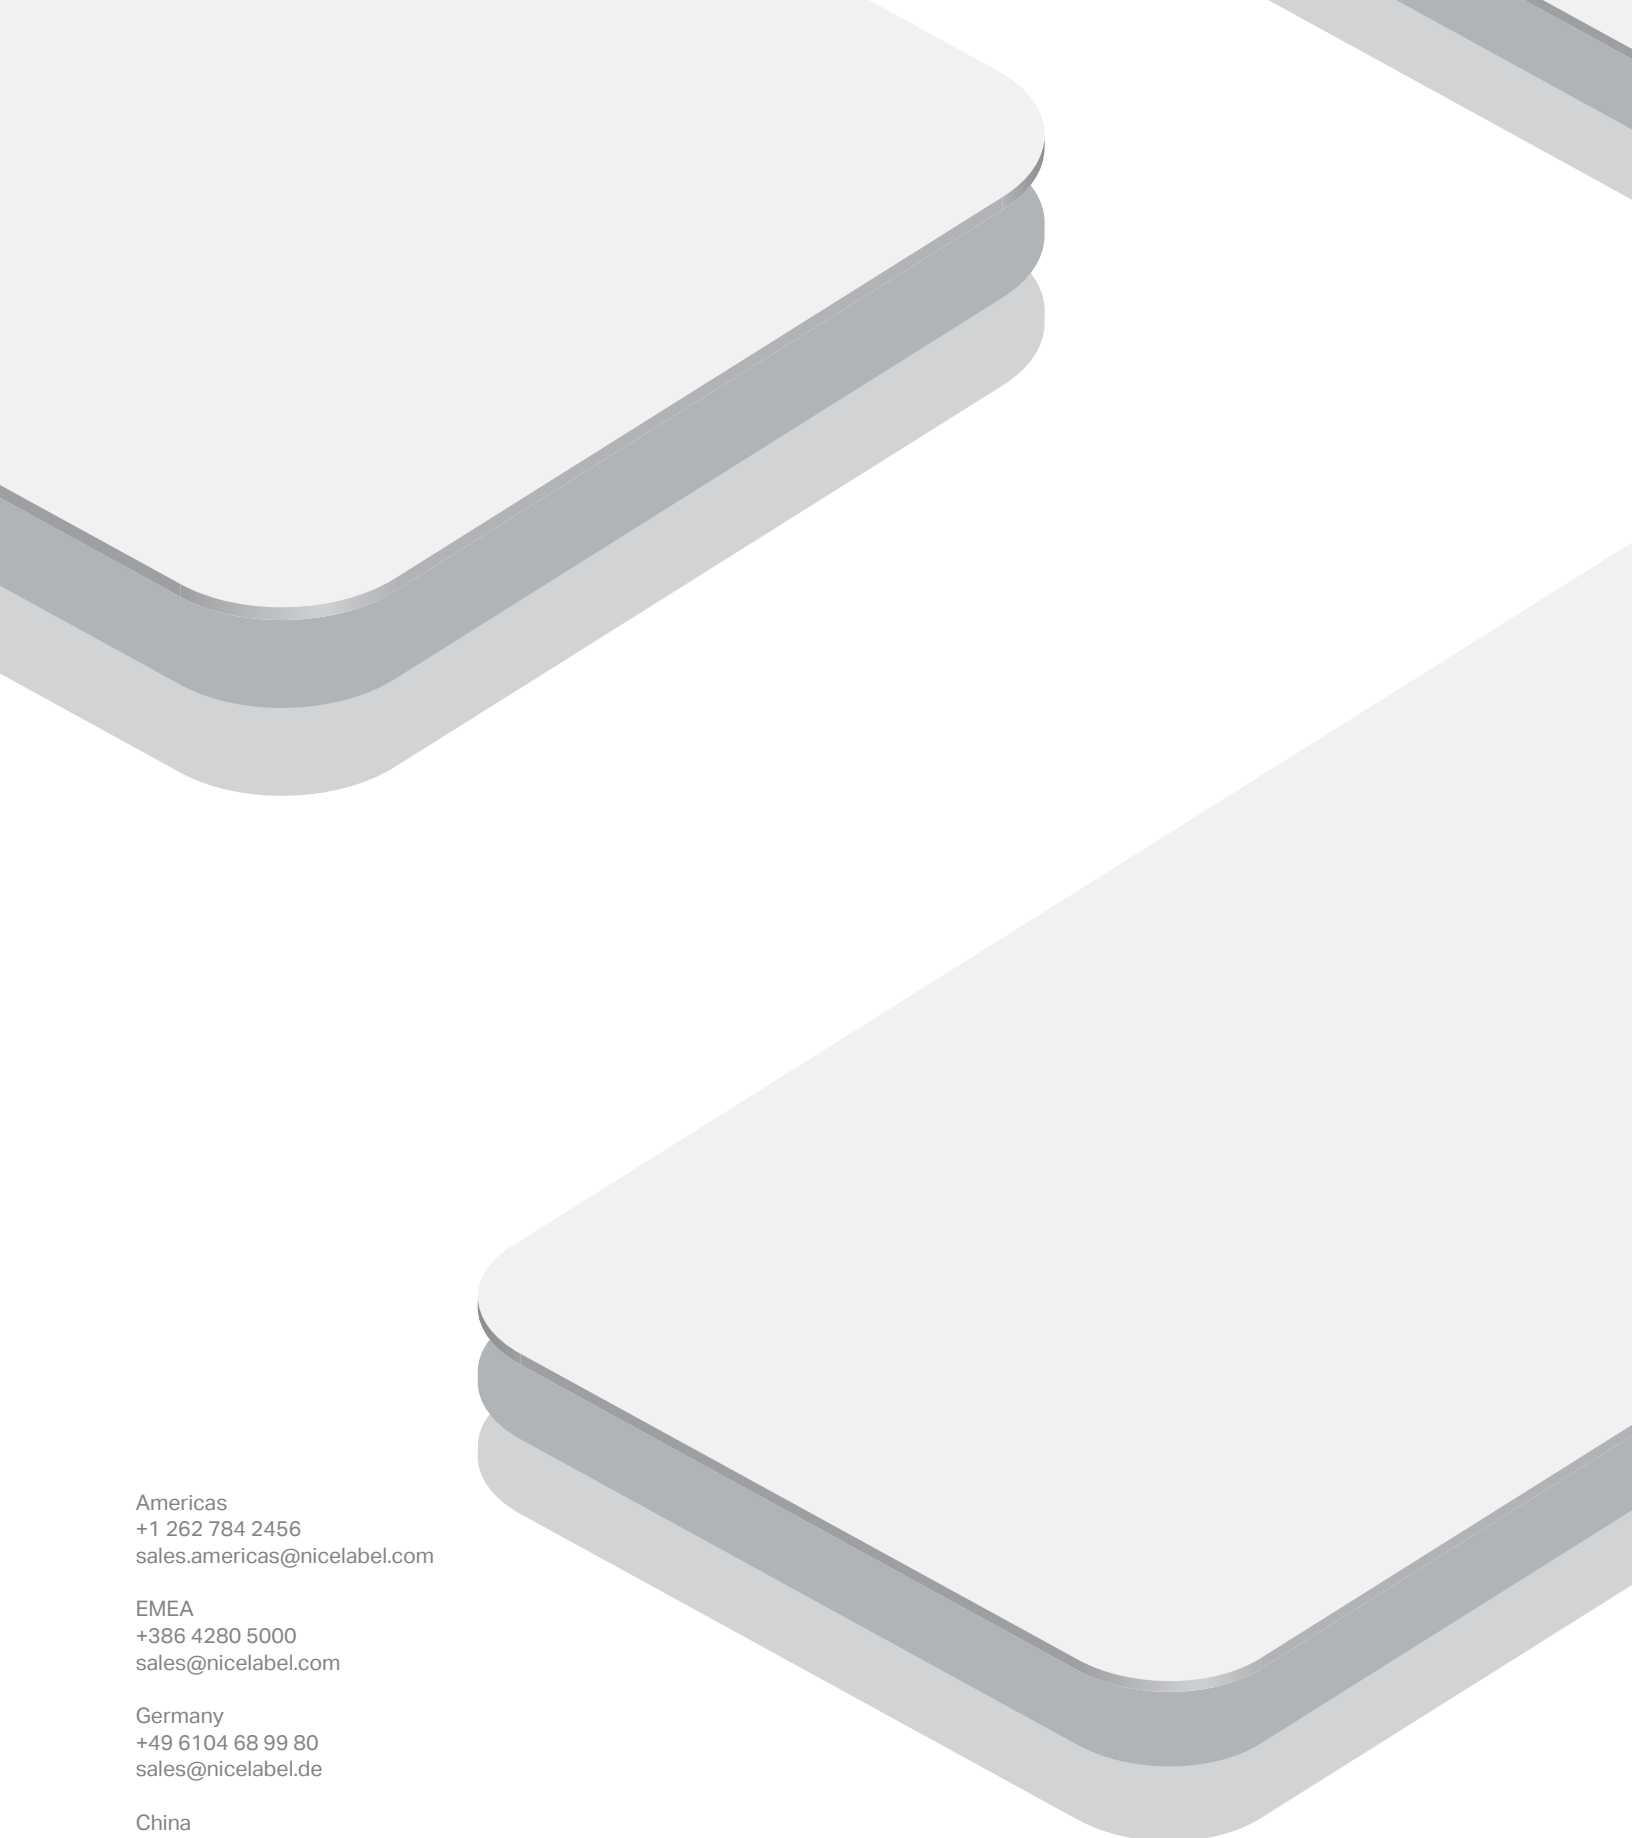

For example, an LMS customer might only be interested in designing of labels, connecting them to a specific database type, and using them in an existing approval workflow.

Custom training is tailored to specific customer needs. If appropriate, existing materials and agenda from other sessions are re-used and tailored to the case.

For each custom training session, training requirements need to be provided in advance:

- Description of customer needs
- Area of interest – which general NiceLabel-related features should the training cover
- Samples of planned label templates or other assets
- Any specific questions that needs to be answered

Details about custom training content, location, duration and price are defined for each training separately.
