Integration System Software Quick Guide comparison by Loftware Cloud Edition

Loftware Cloud Automation: All-in-one integration system

The main goal of any integration is to ensure accuracy and efficiency by interfacing with the master data. Loftware Cloud Automation software enables you to achieve the highest level of integration quickly at much lower cost than with legacy approaches to integration. Loftware Cloud integration system software includes data connectors (triggers), data extraction and transformation (filters), business rules and workflows (actions), and a print server in a single service.

Loftware Cloud Automation includes:

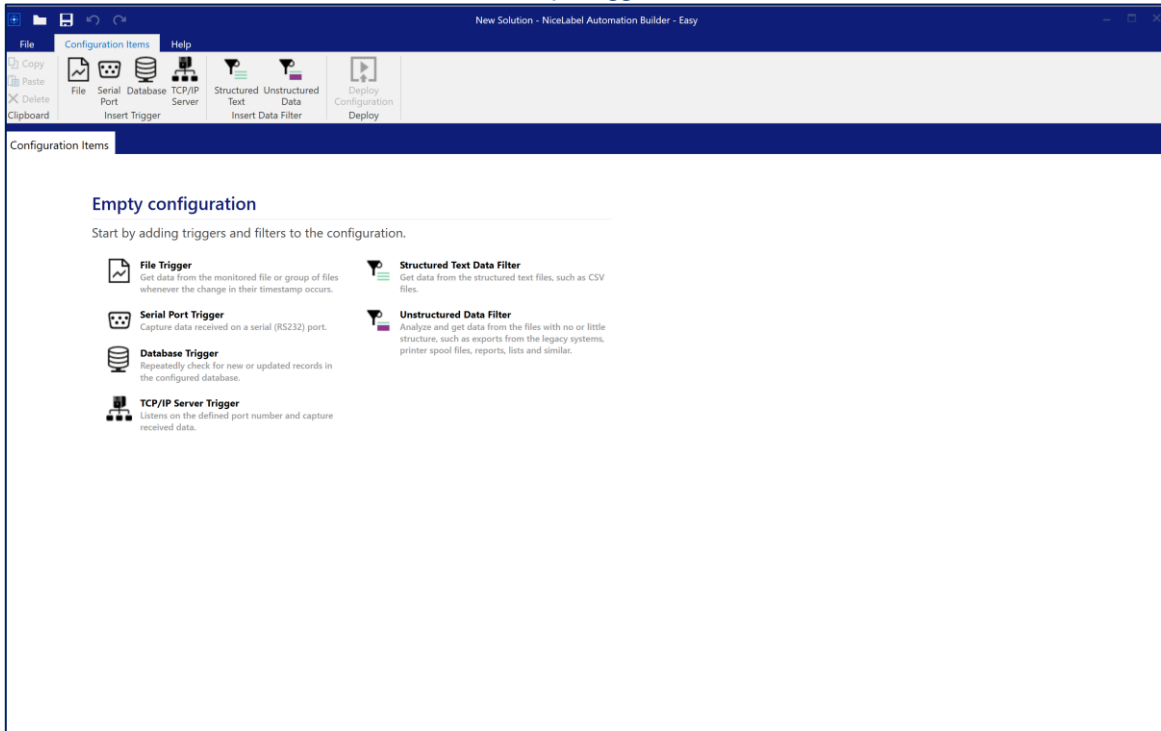

- Intuitive graphical integration builder for building integrations without any coding
- Pre-built integrations to leading business applications for rapid deployment.
- Triggers that accept data from any protocol
- Filters that integrate with all modern and legacy data formats
- Actions for building business rules and workflows
- Next generation 64-bit print server that meets performance and scaling needs by consuming minimal system resources.
- Loftware ABAP package for rapid and seamless SAP integration
