Committed to making life easier for you.

The compact collapsible chair for travel & everyday bathtub or shower use.

The Q100's uncompromising design is the result of extensive research and testing. At Apex Designs, we use only the finest available materials. Durable, medical grade PVC construction has strength comparable to steel and aluminum but is lighter in weight, won't damage your tub if dropped, and will never rust or have zinc-oxide corrosion.

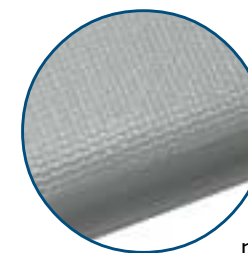

The bottom of each foot incorporates a drain hole for condensation and water run out. A rain channel on the seat allows the shower curtain to close, keeping water off the floor and in the tub.

- Portable and lightweight
- Easy to clean, easy to care for
- Will not rust or corrode
- No tools required to assemble

Q 1 0 0 F

The closed cell foam padding the Q100's back and commode style seat are fully encapsulated in flexible vinyl. Commode hole style seats are internally rounded and then wrapped with foam for greater pressure relief and durability.

Inside edge of commode core is internally rounded and then wrapped for maximum pressure distribution and relief. Closed cell water repellent foam is completely encapsulated in a five dip process of flexible vinyl.

With optional Q100L leg support

Q 1 0 0 C

No tools are required to fold, transport, adjust or use the Q100. The flexible configuration is reversible for left or right transfer and left or right faucet.

Optional Durable 600 Denier nylon carrying case

Easy to assemble - no tools required.
