

Products And Solutions to Keep Your Dairy Products

The production of milk, cheese, and ice cream provides an ideal breeding ground for dangerous microbes.

Let Our Products Help.

Dairy Products

The WHO estimates that contaminated food products cause

600 Million

cases of foodborne illness worldwide each year

Dairy products are especially susceptible to contamination from spoilage. In the US alone, contaminated dairy products accounted for

16%

of all hospitalizations due to foodborne illness

SOURCES: Centers for Disease Control and Prevention, World Health Organization

- Enjoy a quick, easy process for reducing bacteria and extending shelf life
 - Reduce spoilage and maintain freshness of dairy products
 - Protect nutritive value while keeping compatibility with additives

What do we do?

Selective Micro Technologies' Selectocide® ensures your dairy products maintain an enticing appearance and full, fresh flavor. Selectocide® can be used to disinfect and sanitize key equipment used in the dairy production process such as milk bottles, milking equipment, stainless steel transfer lines, pasteurizers, or hydrocoolers. Our outstanding product can even be seamlessly used in existing Clean-In-Place systems.

Effective and easy to use

Selectocide® attacks dangerous bacteria present on the surfaces of dairy production equipment. By selectively targeting dangerous microorganisms at a molecular level, Selectocide® efficiently destroys microbes while preserving the appearance, texture, and taste of dairy products.

Pure ClO₂ by SMT

SMT's pure ClO₂ solution is a safe, friendly alternative to conventional chlorine products. It is extraordinarily easy-to-use and effective at low concentrations. Pure ClO₂ requires only water to generate and has a shelf life of weeks. SMT's products do not alter taste, leave a residual film, or require surfaces to be rinsed after usage.

Certifications and Registrations

For Organic Use
