SMART-FILM-BLINDS

NEED:

Today we are experiencing the horrors of violence in our schools where our kids are present. School shootings have become too frequent and we must provide safety for the students and faculty.

Providing immediate privacy on demand by the flip of a switch, remote, Wi-Fi app or third-party control system, the classroom doors with glass inserts, side lites and windows can switch to frosted opaque at the blink of an eye. You can also do exterior facing windows for high-tech window treatments, sun and glare control, no chains, cords, or strings for operation which have been considered dangerous around kids.

(SFB) Smart-Film-Blinds can also be used as a projection screen, white board, smart board or video display for messaging, pictures, news feeds, media, advertising or to display live TV or any video content via video projection. One of the best features is this applied window film product can be easily removed and replaced if it ever fails. It can be relocated and reused. The life expectancy is 10+ years. Another amazing and important feature is this product reduces the penetration and has ballistic properties it will reduce the intrusion time for law enforcement to arrive and assist. This product is Not Bullet Proof or Resistant but you cannot shoot what you Can't See!

SOLUTION:

By installing SFB on the interior glass will provide instant privacy when needed. The glass will always be clear as normal unless the teacher wants privacy on demand for testing. If there is an emergency, at that time the office can flip a Master Switch and all classroom glass will go frosted opaque so students and faculty can hide in their locked classrooms till help arrives and intruders cannot see into the rooms or where anyone is located, every second counts!

OPTIONS

SFB can be controlled by a central control point, individual control point, or grouped control point via switch, remote, Wi-Fi app or third-party control system. SFB comes in 3 colors, White switches Clear, Gray and Black, all colors switch clear as well but have the tinted color. SFB can also be made with integrated Blind Slats either horizontal or vertical with full control to create a high tech Smart-Film-Blind with no cords or strings or can be Smart-Film Shades by sectioning the window into half, 3rds or quarters to control individually that portion of each window for privacy and natural light

INSTALLATION

SFB is an applied cling technology that sticks to any smooth surface. This product goes on dry and requires electrical low voltage power to switch from clear to opaque or a dimmer can be installed for variable control of opaque from 0-100% and anything in between. SFB is installed on existing glass, any size or shape. SFB is sold per sq/ft and installed by factory certified film installers. SFB should be wired by a licensed electrician provided by others. SFB is stocked locally in Maryland, assembled in our shop and readily available for retrofit installations nationwide. Each installation requires the Dow995 wet glaze mechanical film attachment to door and window frames.
