

REVLINE[®] LATE-SEASON PLANT GROWTH REGULATOR

LATE SEASON
PLANT GROWTH REGULATOR

REVLINE[®] LATE-SEASON is a fortified cytokinin designed to increase pollination and support photosynthesis during fruit or grain fill. The unique combination produces more flowering/fruiting sites, and more importantly increases the plant's net capture of solar energy to help drive sugar production.

INFLUENCE REPRODUCTIVE STAGE

Early reproductive application increases branching, flowering, and fruiting sites

OPTIMIZE PLANT METABOLISM

Strengthens plant cell structures and maintains photosynthesis, even in stress conditions

PRODUCE LARGER YIELDS

Boost yield potential by increasing pod/grain size and reducing abortion incidence

ACTIVE INGREDIENTS

Kinetin.....	0.12%
GABA.....	0.98%
Choline Chloride.....	1.95%

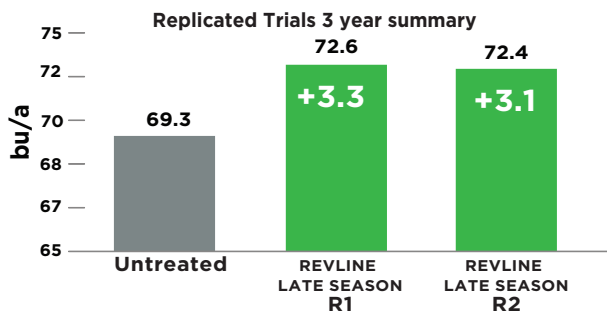

Rate: 12.8 oz/Ac

Net Weight: 5.31 lbs (2.40kg)

Greater pollination + more energy capture

= More Yield!
