

Top Shine BTG (Better Than Graphene) is our best long-lasting protection and extraordinary shine innovation. Top Shine BTG incorporates our proprietary Pure Cure™ technology, which instantly accelerates and disperses the protective coating by bonding uniformly in extreme wet environments on all automotive exterior surfaces. The captivating smooth feel and bright glistening results along with the attractive robust fragrance will have customers coming back for more.

Top Shine BTG delivers exceptional value by also protecting automotive exterior surfaces from UV degradation, oxidation, bugs, bird droppings, tree sap, acid rain and other environmental threats.

For best results, we recommend applying Top Shine BTG as the first protectant right after the cleaning chemical rinse. It is indeed compatible with C-4 Ceramic Polymer Glaze or can be used independently as the only protectant.

The following represents recommended concentrations according to application. Ensure surfaces are properly cleaned and rinsed free of any chemical residues. Best applied through most controlled foaming devices. It may also be applied through v-jet or k-nozzle arches at approximately 1:100-1:200 depending on dwell time before final rinse. Typical application ranges from 7-25 mls per vehicle depending on desired shine and feel.

Consult with your Top Line Chemical Solutions representative for maximum efficiency and results.
