

ISO 50001:2018

“Energy management systems” Consultancy Services

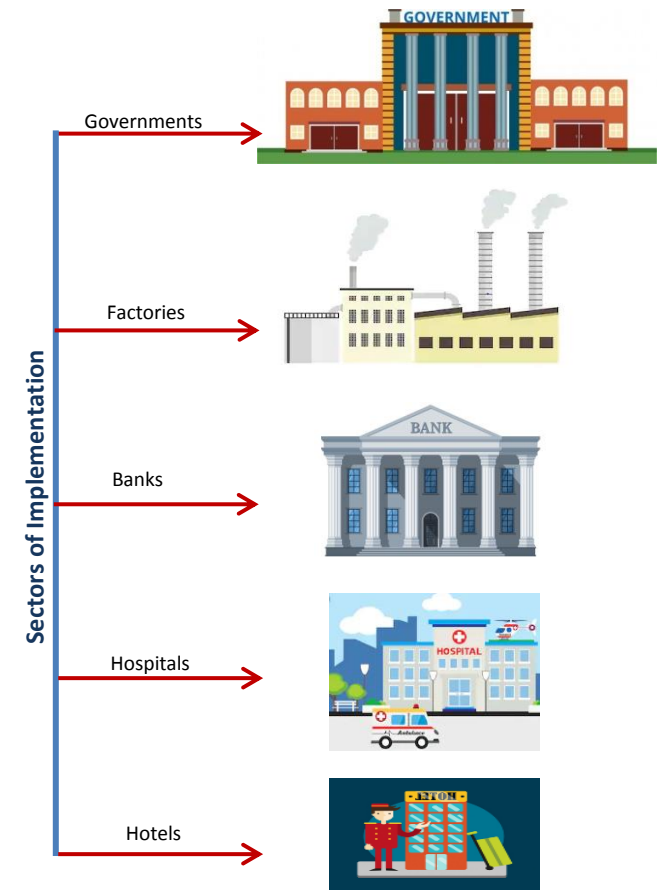

ISO 50001:2018 specifies requirements for establishing, implementing, maintaining and improving an energy management system (EnMS). The intended outcome is to enable an organization to follow a systematic approach in achieving continual improvement of energy performance.

Benefits of ISO 50001:2018 implementation and certification

- Help your organization to improve its energy performance through making better use of its energy-intensive assets.
- Improved energy performance can provide rapid benefits for an organization by maximizing its use of energy sources and energy-related assets, reducing both cost and consumption.
- Reducing the environmental impact and enhancing reputation.
- Drive down costs and improve competitiveness.

VOICE OF QUALITY, once decided to deliver consulting services, we consider the customer is our partner and a part of our success. Our consulting services are based on a scientific methodology starting from listening to the customers’ voice, understanding of their business nature and needs in market, analyzing their problems and strive to get the root causes, setting plans and tactics which enable them to improve their processes’ capability and the efficiency of the management system. We involve professional consultants in many sectors to ensure the perfection of our consulting services.
