Q.20 What is the difference between a personal computer and a laptop? Marks:(10.00/10.00)

Subject: Concepts of ICT (117925)

- ☒ A laptop computer is a portable computer that can fit into a briefcase. Their processing power and storage capacity is typically the same as a PC, but the technology needed to produce a portable computer is expensive, so a laptop will cost more than a PC with the same features.
- ☐ A multimedia computer is a computer that is optimized for high multimedia performance.
- ☐ A thin client is a computer or a computer program that depends heavily on another computer (its server) to fulfil its computational roles. This is different from the traditional fat client, which is a computer designed to take on these roles by itself. The specific roles assumed by the server may vary from providing data persistence (for example, for diskless nodes) to actual information processing on the client's behalf.

Q.21 Explain the images below to describe the steps necessary to start up a computer.

step 1 to step 2

Marks:(0/15.00)

Subject: Operate a PC (116932)

Your Answer:

Your Answer:

Connect the computer's Power lead or AC adapter into the CPU unit or laptop and use a wall outlet to plug the cord in. Most laptops and portable computers run on battery and does not require an outlet to be operated. Find and press the "on switch" on the top of you computer or near the screen

on the laptop. Wait for the computer to boot up. A screen will come up, as this is the initial "boot up" screen. Wait until everything is loaded. The more programs that is set to load when the computer is started, the longer it will take. You may not want to attempt to start up programs or open files right away, as this creates more work for the computer.

Q.22 What is a USER NAME? Marks:(0/1.00)

Subject: Operate a PC (116932)

Your Answer:

Q.23 What is a PASSWORD? Marks:(0/5.00)
