

FlexPOD

Multi-camera system with video analytics & Starlight technology

- Add it to an existing network surveillance system.
- Use it as an independent surveillance tool.
- \$2,995 for FlexPOD with 2 stationary cameras
- \$3,795 for FlexPOD with 1 stationary camera, 1 PTZ

The FlexPOD is the newest member of our POD Systems.

Like all our PODs, the FlexPOD is quick to deploy and only requires power. The difference is video is recorded directly to the micro-SD card in each camera and can also record back to the client's existing server if needed via Wi-Fi or cellular. The SD card can be the sole video storage or be a backup if wireless or cellular to the client's existing server fails.

The cameras on the FlexPOD have video analytics capabilities like Object Removal Detection and Intrusion Detection. Also standard in the cameras is Starlight Technology which has longer distance coverage and illuminates better than standard IR. Video that is black and white on standard IR can be made clearer, in color, with Starlight Technology.

The FlexPOD comes in multiple configurations starting with 2 stationary cameras up to a 4 camera combination of 3 stationary cameras with 1 PTZ.

Specifications

Stationary Camera: 4MP with Smart Analytics, Motorized Varifocal Lens, 114° Field of View, 100' IR Range, Starlight Low-Light Sensors for .0008 Lux and 128GB Storage

Pan-Tilt-Zoom: 25x Optical Zoom, 16x Digital Zoom, 4MP with Advanced Video Analytics, 150' IR Range, Starlight Low-Light Sensors for .001 Lux, and 256GB Storage

Wireless Transmitter: 2.4GHz or 5GHz, Gain of 8-16dBi, 24v POE power adapter built-in.

Cellular Router (Optional): Compatible with Verizon, Sprint, AT&T, T-Mobile, U.S. Cellular, Rogers, Telus and Bell. Cellular Omni antenna with 3.5-5.5dBi built-in. *SIM card from Client's cellular provider required.*
