

## Meet Sense

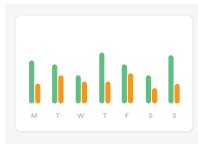

See what's up, know what's on.

Real-time monitoring of your home's energy use and solar production.

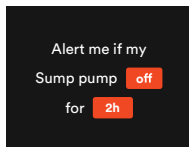

### Reduce your energy use

Determine what is contributing to your electricity bill and identify opportunities to save through real-time energy monitoring.

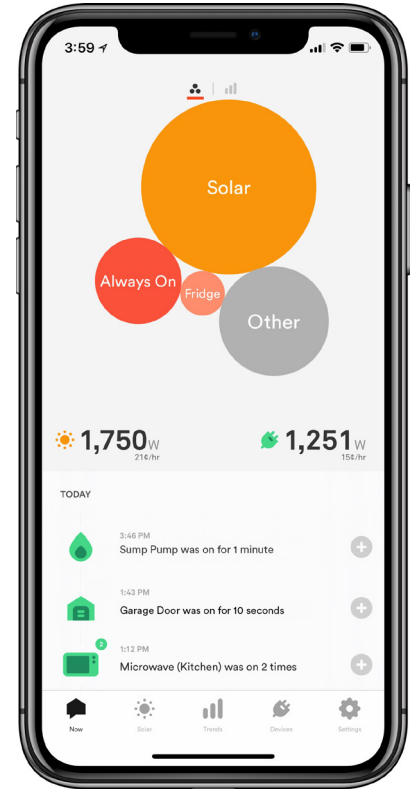

### See your whole home energy picture

View your solar production and energy use side-by-side to help you shift your power usage to peak production periods.

### Set smart alerts

Create custom notifications to receive alerts when devices turn on or off. Did the garage door open? Sump pump turn on?

#### *Time Magazine*

“I can confidently say that after you install it, it will eventually become the smartest gadget in your home — and help you save money to boot.”

#### *MIT Technology Review*

“I found myself switching things on and off to see what they consumed. I quickly realized that my decades-old attic fan—out of sight, out of mind—was consuming 500 watts.”

#### *Customer Testimonial*

“This thing is amazing! It shows me how much power my home is consuming and if you have solar panels, like I do, how much power you’re producing.”
