VETERANS CARBON HOLDINGS SET TO ISSUE FIRST BCARBON-VERIFIED SOIL CARBON CREDITS; CREDITS TO BE MINTED ON DOVU'S HEDERA BLOCKCHAIN FOR GLOBAL SALE

Fargo, ND: Veterans Carbon Holdings, Inc. (VCH) announced today that its first portfolio of science-based soil carbon credits, generated from farmers and landowners across North Dakota and Minnesota, is now under final review by BCarbon, with issuance expected by late December. Upon issuance, all verified credits will be minted, tracked, and made available for purchase on DOVU's blockchain platform, powered by Hedera Guardian. This milestone represents one of the first large-scale integrations of BCarbon-verified soil carbon credits into a fully transparent, digitally traceable blockchain marketplace.

Strengthened Validation to Meet International Standards

During the review process, which began in mid-November, VCH completed all required documentation for EU, UK, Asian, and North American markets. Enhancements were made to align with the highest global standards for environmental integrity, including:

- *Good Stewardship & Land Management protocols*
- *Additionality*
- *Permanence & long-term land use commitment*
- *Carbon neutrality for each participating farmer and landowner*
- *Full transparency in measurement, modeling, and quantification methods*
- *Immutable tracking, retiring, and auditing of credits*
- *Biodiversity metrics compliant with UK market expectations*

Independent Scientific Collaboration

To ensure unmatched scientific integrity, VCH partnered with leading experts, including:

- *LSU Ag Center – Ted Gautier*
- *ALTSA (Australian Laboratory Testing Services) – Ray Harris*
- *Ward Rushton – Statistical Analysis*
- *Dan Davidson, PhD – Agronomy*

A Program Built for Farmers and Rural Communities

Every farmer and landowner enrolled in VCH's carbon program will become carbon neutral, with no restrictive participation barriers. The program is designed to increase on-farm profitability, improve soil fertility and water management, reduce financial risk, and advance long-term sustainability for rural communities.

Positioning VCH, BCarbon, and DOVU as Global Market Leaders

Once credits are issued and transferred to DOVU, VCH will stand alongside BCarbon (Rice University) and DOVU as pioneers in the first wave of quantifiable, verifiable, blockchain-tracked agricultural soil carbon credits. Market demand is already emerging from buyers in the UK, Asia, Canada, and additional regions seeking high-integrity offsets.

Quotes

"Farmers and rural communities deserve to be at the forefront of the climate economy. By combining rigorous soil science with blockchain transparency, we are delivering carbon credits that buyers can trust and ensuring revenue flows back into the regions that are storing the carbon."

— Katie Lorenz, President, Veterans Carbon Holdings

"VCH's commitment to scientific validation makes their credits an ideal fit for the DOVU platform. Hedera's Guardian framework ensures that every credit issued is fully traceable, auditable, and immutable from creation to retirement."

Irfon Watkins, CEO, DOVU

Advancing Global Soil Science

VCH continues to collect additional soil and crop data that will contribute to improved soil fertility, enhanced water management, and more effective land stewardship in agricultural regions worldwide.

About Veterans Carbon Holdings

Veterans Carbon Holdings, Inc. partners with farmers and landowners across the United States to develop high-integrity soil carbon credits backed by rigorous scientific validation and transparent digital tracking. VCH is committed to advancing rural economies, improving soil health, and delivering global-grade carbon solutions grounded in real agricultural practice.
