Stretch marks are a common part of life for many people.

When the skin has been stretched too far or too fast – such as during puberty, pregnancy or weight fluctuation – these unsightly lines appear. Finally, there is a treatment that will reveal smooth and beautiful skin. Laser stretch mark removal is fast, easy and virtually pain free.

How does it work?

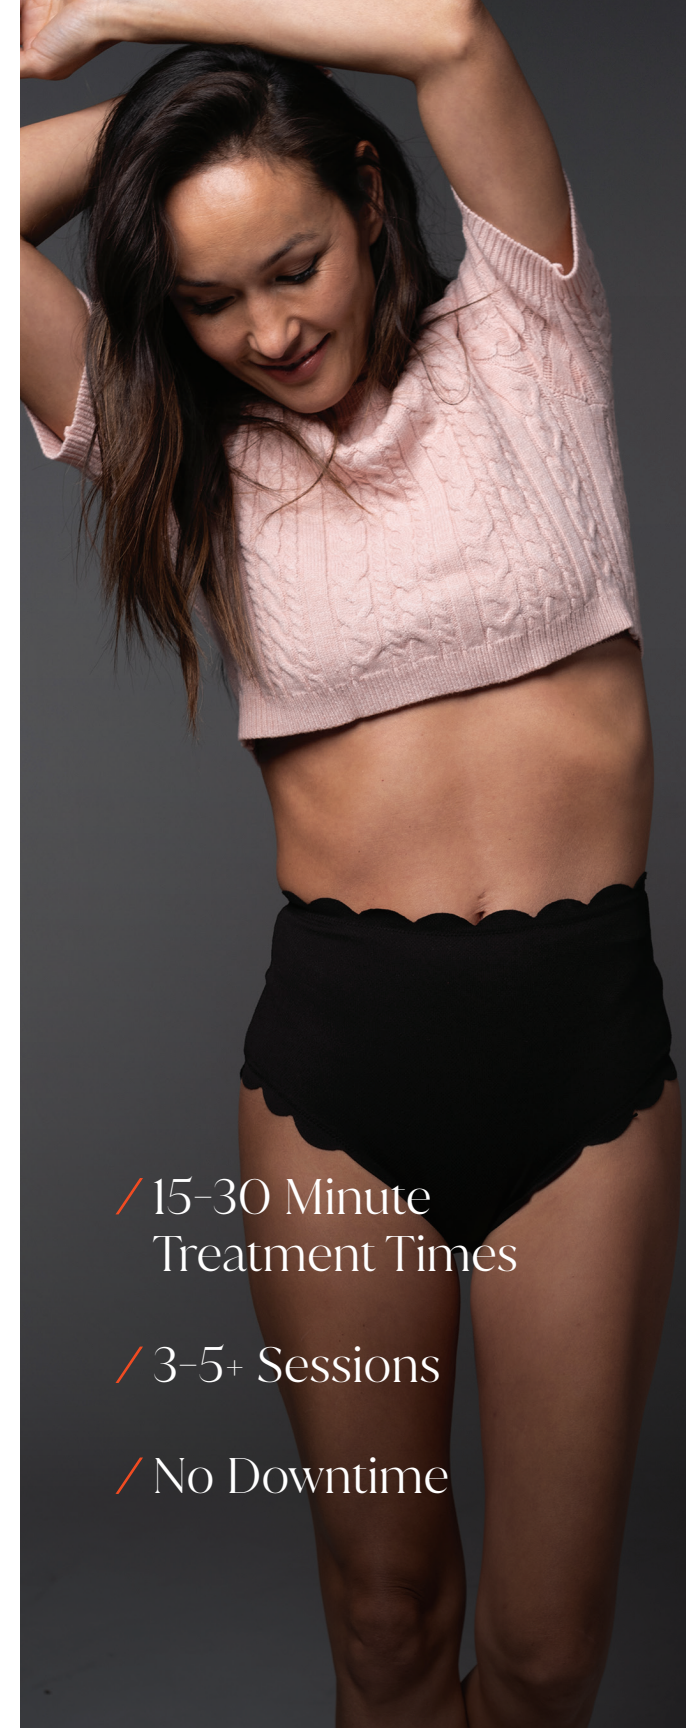

This fractional technology uses pulses of laser light to target and break down stretch marks, triggering new tissue production underneath the skin. This new collagen will help improve both the texture and color of the stretch marks.

What results can I expect?

You can expect to see a decrease in the appearance of your stretch marks and a smoother texture of the skin*.

Treatment plans can be adjusted to fit everyone's lifestyle – speak to your provider regarding desired downtime, comfort, and results.
