Match HTML File Export

This process requires an internet connection which may not be available at Hayes City. Have a regular take home the tablet and follow these simple instructions. This sends the Town Crier a .html file for posting.

On the back end, this file is imported into Excel for email distribution and posting on the RGR website.

.pdf file exports have proven to be unreliable as the fire tablets seem to truncate the right hand most data in the match file if it is wider than 5 stages.
