

Eclipsys Releases Sunrise™ 4.5 XA™, Delivering Best Practices Across the Healthcare Enterprise on a Single, Integrated Technology Platform

— New Release of Eclipsys Advanced Clinical Solutions Helps Healthcare Organizations Achieve a Connected Enterprise through Superior Practice and Technology Interoperability —

Boca Raton, FL — January 9, 2006 — Eclipsys Corporation® (NASDAQ: ECLP), The Outcomes Company®, today announced the general availability of Sunrise 4.5 XA, the company's latest release of advanced healthcare information technology solutions.

The Sunrise 4.5 XA clinical suite helps healthcare organizations meet escalating challenges to save time, save costs and save lives™. The release is delivered on a single clinical platform that helps organizations connect all physicians, nurses, pharmacists, other clinicians, administrators and processes across the complex healthcare enterprise, enabling patient information to flow from ambulatory and ED settings to critical care and other acute settings. As a result, Eclipsys Sunrise solutions help eliminate miscommunications and errors caused by departmental "islands of care," incomplete access to the full patient record, and inconsistent "handoffs" from one caregiver to another.

"The Sunrise 4.5 XA clinical suite is our biggest and most significant product release to date," said R. Andrew Eckert, Eclipsys president and chief executive officer. "This release builds upon Eclipsys' strength as a provider of innovative software and service solutions with a proven track record of clinical adoption and improved outcomes. The combination of our clinical and financial software, supported by embedded content and the knowledge of our expert services organization, makes Eclipsys an industry-leading provider of solutions that help our customers be the best places to give and receive care."

"As a participant in the Eclipsys Software Preview Program, I am excited about the new features in Sunrise 4.5 XA, particularly the evolution of the Eclipsys medication management solutions," said Dolores Partyka, RN, MSN, senior clinical analyst, Frankford Hospitals, Philadelphia, PA. "This impressive solution set provides clinicians with an end-to-end medication management solution that will promote patient safety by ensuring each caregiver on the team knows the latest information about the patient's current therapy."

Technology and Practice Interoperability

The Sunrise 4.5 XA advanced clinical suite delivers approximately 1,500 new or enhanced capabilities for improving patient throughput, documenting care, creating orders, reviewing test results, and coding for maximum reimbursement — all on a single clinical platform. This release builds upon the strengths of previous Sunrise releases on the XA platform, including the fully integrated capabilities of Eclipsys Sunrise Ambulatory Care Manager™ and Sunrise ED Manager™ solutions. Additionally, in Sunrise 4.5 XA Eclipsys delivers the first truly integrated, end-to-end medication management solution in the industry. Because all of the solutions in the Sunrise advanced clinical suite share the same Health Data Repository, are customized for the workflows of specific clinical environments and utilize the same architecture, Eclipsys customers can link care providers, operations and the entire continuum of care to achieve unprecedented interoperability.

"Because the Sunrise 4.5 XA clinical suite runs on a single platform, it supports cross-provider and cross-departmental workflows — from ambulatory care to the ED to critical care," said Diane Gilbert Bradley, MD, Eclipsys chief medical officer. "Patients can move safely and rapidly through the care process with a minimum of administration and a maximum of hands-on care. The bottom line is that the Sunrise clinical suite helps clinicians efficiently manage the complexity of healthcare while promoting patient safety."

“The tight integration in the Sunrise clinical suite and its single-platform architecture provides tangible and measurable benefits across the healthcare enterprise,” said Rick Mansour, MD, Eclipsys chief medical information officer. “For example, the powerful Prescription Writer, which we’ve enhanced in Sunrise 4.5 XA, improves efficiencies for physicians as they prescribe medications and authorize refills. It also helps reduce costs by checking insurance coverage through the Pharmacy Benefits Manager and improves patient safety by checking for duplicate drugs, allergies and interactions. This is just one of the hundreds of ways that technology enhancements in Sunrise 4.5 XA translate to improved outcomes on both the clinical and financial side.”

In addition, Sunrise 4.5 XA is based on ObjectsPlus/XA™, Eclipsys’ open objects initiative that facilitates efficient integration with legacy systems and third-party applications. Eclipsys has leveraged its open technology to accelerate the implementation of this new release and speed time to value for its customers. “ObjectsPlus/XA enables our customers to obtain greater value from Sunrise 4.5 XA because they can take an ‘extend and embrace’ approach to their existing systems, rather than ripping them out and rebuilding from scratch,” said John Gomez, Eclipsys executive vice president and chief technology strategy officer. “End users benefit from the advanced functionality of Eclipsys advanced solutions without having to forfeit the special expertise they may have built into their existing systems. Overall, the accelerated implementation and seamless integration save organizations significant costs and time.”

Enabling the Connected Enterprise

The Sunrise 4.5 XA clinical suite makes possible a truly connected enterprise in which clinicians have the patient information and evidence-based clinical content they need at their fingertips. By accelerating the flow of patient care and information, the software helps clinicians make the best possible decisions for their patients, anytime and anywhere. The enhancements in Sunrise 4.5 XA also facilitate compliance with 2006 accreditation standards established by the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) that focus on improving the quality of information and communication, particularly as patient care is handed off from one clinician to another.

“Countless studies have proven that doing things right the *first* time significantly reduces costs, while saving time and improving clinical outcomes,” Eckert said. “This includes the savings achieved by eliminating unnecessary duplication of tests and procedures, and preventing avoidable medical errors such as drug interactions or known allergic reactions. The end-to-end medication management solutions in Sunrise 4.5 XA, for example, help control costs by reducing the risk of costly medication errors. They also help organizations realize significant savings in staff costs, patient length of stay, malpractice lawsuits and more.”

Highlights of the Sunrise 4.5 XA release include:

- **Patient-Centric Workflow** — Sunrise 4.5 XA features new, advanced workflow tools that are patient-centric, help eliminate paperwork and organize task management. Workflow tools in this release of Sunrise Clinical Manager™, the foundation of the Sunrise advanced clinical suite, automatically translate a physician’s order into specific tasks and assign the task to the appropriate nurse or other clinician, adding the individual elements of care on the patient’s flowsheet. Rules can be configured to check if clinical tasks were performed and documented in a timely fashion.
- **End-to-End Medication Management** — Sunrise 4.5 XA provides an integrated, end-to-end medication management solution that supports the workflows of physicians as they place orders, pharmacists as they verify and dispense medication orders, and nurses as they administer medications to the patient, with significant benefits in efficiency, accuracy and patient safety. This solution significantly reduces the number of steps and potential for error in the medication management process and frees up clinicians’ time for valuable clinical interventions.

- **Point-of-Care Bar-Coding** — Knowledge-Based Medication Administration™ is part of the Eclipsys overall clinical strategy to respond to federal and state regulatory requirements, as well as JCAHO, ISMP, Leapfrog and Institute of Medicine (IOM) initiatives to improve medication use safety and to minimize medical errors. Knowledge-Based Medication Administration ensures safety during the medication administration process by checking the “five rights” of medication administration (right patient, right medication, right dose, right route, and right time) at the point of care. This safety-enhancing capability uses Sunrise Clinical Manager’s embedded Clinical Decision Support to provide advanced clinical screening of medication orders for appropriateness at the point of care. Because it is tightly integrated into Sunrise Clinical Manager’s nursing workflow, Knowledge-Based Medication Administration enables the creation and management of a real-time electronic Medication Administration Record.
- **Enhanced Prescription Writer** — The Eclipsys Prescription Writer helps clinicians create and maintain prescriptions in both ambulatory and ED environments. Expert dosing information, duplicate alerts at the point of prescription writing and drug-to-drug and drug-to-allergy checking at the time of prescription writing all help minimize potential errors and improve patient safety. In Sunrise 4.5 XA, the Prescription Writer has been enhanced to help save time as clinicians refill and renew prescriptions. To further help save lives, Eclipsys has added a pediatric dose calculator.
- **Expanded CPOE Capabilities** — Eclipsys has long been recognized for its robust computerized physician order entry (CPOE) system with real-time and asynchronous clinical decision support and rule-building capabilities for alerts. Sunrise 4.5 XA includes enhancements that make this system even stronger. Now physicians can create complex orders and link individual orders so that a change to one medication order is automatically made in all. Sunrise 4.5 XA also includes “soft stop” or review dates to meet individual hospital needs. To further support clinical workflows, Sunrise 4.5 XA supports “Now and Then” and “STAT and Then” orders, as well as multiple or uneven frequencies in a single order. Clinicians can attach key documents to an order to provide additional detail on the patient for other providers or departments. These enhancements help improve efficiency in patient “handoffs” and improve patient safety because the patient data that caregivers need to safely carry out an order is readily available when and where they need it.
- **Enhanced Support for Emergency Departments** — Sunrise 4.5 XA includes enhancements to the ED Display Board, a highly flexible system that provides color-coded alerts and custom-configured columns so that real-time information is immediately readable anywhere in the ED. Enhancements in the current release improve both usability and security of patient information. “Saving time is absolutely essential in emergency care,” Eckert said. “Sunrise ED Manager 4.5 XA lets clinicians know, at a glance, what needs to be done and in what priority to help them save time and lives.”
- **Rules-Based Patient Tracking** — Sunrise 4.5 XA includes enhancements to one of the most powerful rules-based Status Boards in the healthcare industry. This flexible tool can be leveraged in the ED to escalate situations such as abnormal vital signs, or highlight special requirements such as latex allergies to help save lives. Enhancements in this release include role-based views so healthcare workers can see the information they need to see, based on their role in the patient’s care, and the ability to view other Emergency Departments’ boards within the same enterprise. Emergency Departments can now also use icons on the board and set an unlimited number of rules on the board for improved safety and usability.
- **Expanded Content** — With the addition of more embedded, evidence-based content, including diagnosis-based templates and procedure notes, the Sunrise 4.5 XA clinical suite supports clinicians with actionable knowledge at the point of care. This helps clinicians make decisions based on proven best practices and healthcare organizations achieve consistently high standards of care.

- **Integrated Clinical and Financial Solutions** — Eclipsys Sunrise advanced clinical and financial solutions work in concert to let physicians and hospital staff know when tests, procedures, medications or hospital stays are not covered by Medicare or the patient's private insurance plan — and provide this information *before* treatment is prescribed or actions are taken for which the healthcare enterprise may not be reimbursed. Using single signon and context management tools, Sunrise Access Manager/Patient Financial Manager™ and Sunrise 4.5 XA advanced clinical solutions share integrated data for improved operations across the enterprise.

“Ultimately, the most important outcomes of the connected enterprise go hand in hand with saving time, costs and lives,” Eckert said. “Saving time and costs are the byproducts of eliminating duplication and reducing the number of steps in the care process enables care to begin more promptly, more efficiently and more appropriately. Saving lives by helping our customers provide the best possible care is the goal of everyone at Eclipsys. The Eclipsys solution suite, especially with the release of Sunrise 4.5 XA, transforms the delivery of patient care and revenue cycle management to make the connected enterprise and its goals a reality today.”

About Eclipsys

Eclipsys is a leading provider of advanced clinical, financial and management information software and service solutions to more than 1,500 healthcare facilities. Eclipsys empowers healthcare organizations to improve patient safety, revenue cycle management and operational efficiency through innovative information solutions. For more information, see www.eclipsys.com or email info@eclipsys.com.

Statements in this news release concerning the functionality of Eclipsys software and its benefits to clients, including integrated care delivery and saving time, costs and lives are forward-looking statements and actual results may differ from those projected due to a variety of risks and uncertainties. As is typical with new software releases in general, Sunrise 4.5 XA will require additional work to address issues that will be discovered as the software comes into use more broadly in our client base. It will take time for Sunrise 4.5 XA to be broadly deployed because transitions from older versions of our clinical software or competing products, or first-time implementation of clinical software for new clients, take many months to negotiate, plan, and effect. Thus the full benefits of Sunrise 4.5 XA will not be realized for some time. Further, results from use of our software depend upon a variety of factors and can vary by client. Each client's circumstances are unique and may include unforeseen issues that make it more difficult than anticipated to implement or derive benefit from software. More information about company risks is available in recent Form 10-Q and 10-K filings made by Eclipsys from time to time with the Securities and Exchange Commission. Special attention is directed to the portions of those documents entitled “Risk Factors” and “Management's Discussion and Analysis of Financial Condition and Results of Operations.” Eclipsys Corporation and The Outcomes Company are registered trademarks of Eclipsys Corporation. Sunrise, XA, the phrase “save time, save costs and save lives”, Sunrise Ambulatory Care Manager, Sunrise ED Manager, Sunrise Clinical Manager, Sunrise Access Manager/Patient Financial Manager and Knowledge-Based Medication Administration are trademarks of Eclipsys Corporation. Other product and company names in this news release are trademarks and/or registered trademarks of their respective companies.

Eclipsys Sunrise Community Plus™ Deployment Begins at United Regional Health Care System, Texas

**— Community Hospital Consolidates Healthcare Information Technology
by Upgrading and Replacing Existing Systems with Eclipsys Solutions —**

Boca Raton, FL — January 23, 2006 — Eclipsys Corporation® (NASDAQ: ECLP), The Outcomes Company®, today announced that United Regional Health Care System (URHCS), Wichita Falls, TX, has begun deploying virtually the entire portfolio of Eclipsys Sunrise™ advanced software solutions available as part of Eclipsys Sunrise Community Plus, a specialized clinical and revenue cycle workflow solution for small to mid-sized healthcare organizations.

Sunrise Community Plus is based on Eclipsys' proven track record of success in clinician adoption and features the ease of use and workflow-enhancing design of Eclipsys systems, particularly order entry and clinical documentation. The suite of Sunrise advanced clinical software within the Sunrise Community Plus package provides clinical decision support at the point of decision making, end-to-end medication management from the physician to the pharmacist and the nurse, plus many other cost-effective clinical and financial workflow solutions tailored to the specific needs of community hospitals. Sunrise Community Plus is designed to help community healthcare organizations reduce costs, increase efficiency and maximize resources and reimbursements just a few months after deployment by utilizing a proven implementation process.

"Eclipsys is proud that United Regional Health Care System has chosen our Sunrise advanced clinical and financial solutions as part of our specialized Sunrise Community Plus program, which has been designed with the specific challenges, needs and resources of community hospitals in mind," said R. Andrew Eckert, Eclipsys president and chief executive officer. "As the foundation of the healthcare organization's hospital information system project, Sunrise Community Plus will connect the enterprise and improve patient care and safety outcomes while enhancing revenue cycle management capabilities."

Expected Improvements

The Eclipsys Sunrise solutions were selected by a multi-disciplinary Information Technology Selection Team at URHCS after literally thousands of hours of evaluating numerous healthcare information systems and vendors.

"Our Information Technology Selection Team chose Eclipsys Sunrise solutions because its advanced clinical documentation system, integrated with a financial package, would provide the fluid, comprehensive system from patient check-in to patient dismissal that we need," said Nancy Townley, RN, MSN, CNA, executive vice president of Operations. "The new information system will foster more consistent and complete communication among our staff to help them function more efficiently, resulting in enhanced patient safety and improved documentation. In addition, URHCS will benefit from a robust IT environment with fully integrated financial applications, improved reliability of systems, and enhanced flexibility for future IT growth."

Existing clinical and financial systems at URHCS will be replaced by Eclipsys solutions in the areas of admission/discharge/transfer (ADT)/patient registration/patient tracking/master person index (MPI), patient scheduling, patient accounting, computerized physician order entry (CPOE), remote access for physicians, electronic medical record (EMR), clinical decision support, financial decision support, health information management (abstracting, document image management, point-of-service image capture, release of information, deficiency management with chart completion and chart tracking), nursing documentation, emergency department, laboratory and blood bank, radiology, and pharmacy.

New capabilities will also be introduced such as a centralized EMR, interdisciplinary documentation, medication bar-coding and a computerized radiology system. The Eclipsys solutions include a core set of standardized, pre-configured order sets, discharge instructions, templates for clinical documentation, evidence-based clinical practice

guidelines and a rules engine with advanced alerts. As a result, the Eclipsys solution helps significantly enhance the quality and safety of patient care, while improving clinician efficiencies so they can spend more time with patients.

Implementation Begins

The three-phase implementation began in January 2006 and will be completed over the next three to five years. The first phase of the project will focus on transformation of the financial management system at URHCS, while phase two will focus on Sunrise core clinical capabilities. The final phase of the project will focus on clinical transformation with the deployment of Sunrise advanced clinicals, as well as supporting content such as Sunrise SKOLAR MD Premium, powered by Wolters Kluwer Health.

"Our investment in Eclipsys advanced clinical solutions is vital to our organization as we prepare for the future of healthcare," Townley said. "This is not only a huge investment in our infrastructure and operations, but also in our patients as we embrace healthcare information technology that raises the bar for excellence in the quality of patient care and clinical outcomes. It's an exciting time for us."

About United Regional Health Care System

Offering advanced technologies and facilities, a broad spectrum of health care services normally and a level of quality care unmatched in the region, United Regional Health Care System is a comprehensive health care system designed to deliver excellence in health care. United Regional's passion is to provide excellence in health care for the communities we serve. Focused on total patient care and superior customer service, the employees and medical staff of United Regional are making a positive difference in the lives of others. United Regional's commitment is to make health care more accessible by providing services such as our Lead Level III Trauma Center, Cancer Treatment Center, technologically advanced cardiac and surgical services, dedicated pediatric and Level II nursery which is funded by the Children's Miracle Network fundraising efforts and a wide array of ancillary services including PET/CT. The employees of United Regional Health Care System adhere to five pillars of excellence: people, service, quality, finance and growth. By making these pillars a part of the culture, the employees and medical staff are working together to continue to raise the standards of excellence for health care for the communities we serve. Statements in this news release concerning the scope of the relationship, the timing of implementation, and the benefits provided by Eclipsys software and implementation services are forward-looking statements and actual results may differ from those projected due to a variety of risks and uncertainties. Implementation and customization of Eclipsys software is complex and time consuming. Results depend upon a variety of factors and can vary by client. Each client's circumstances are unique and may include unforeseen issues that make it more difficult than anticipated to implement or derive benefit from software or implementation services. The success and timeliness of the company's services will depend at least in part upon client involvement, which can be difficult to control. Eclipsys is required to meet specified performance standards, and the contract can be terminated or its scope reduced under certain circumstances. More information about company risks is available in recent Form 10-K and other filings made by Eclipsys from time to time with the Securities and Exchange Commission. Special attention is directed to the portions of those documents entitled "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations." University Hospitals Health System, Cleveland, Announces Plans to Implement Eclipsys Sunrise™ Advanced Clinical Solutions

**— Integrated Electronic Health Record Spanning 150 Sites to Provide Foundation
for Improved Quality, Efficiency of Care —**

Cleveland, OH, & Boca Raton, FL — January 24, 2006 — Eclipsys Corporation® (NASDAQ: ECLP), The Outcomes Company®, and University Hospitals Health System (UHHS), Cleveland, the leading healthcare delivery system in northeast Ohio with more than 150 locations, today announced that the health system plans to contract for the Eclipsys Sunrise clinical information suite. Consistently ranked among America's best hospitals by *U.S. News & World Report*, UHHS plans to deploy Eclipsys' advanced clinical solutions as part of a strategic initiative to improve patient care, patient satisfaction and clinical workflow.

The Eclipsys Sunrise advanced clinical suite helps healthcare organizations save time, costs and lives by supporting best practices across the enterprise and the continuum of care on a single, integrated technology platform. As a result, the many individuals involved in a patient's care can share information seamlessly. This includes the Eclipsys integrated medication management solution, which provides the physician, pharmacist and nurse with a shared solution to ensure the safe management of a patient's medication therapy. Using integrated Sunrise solutions, information handoffs between providers, departments, shifts and facilities can be completed efficiently and accurately.

An interdisciplinary team of UHHS physicians, nurses and senior management recommended Eclipsys after an extensive analysis of other clinical information solutions. UHHS plans to contract for and deploy: Sunrise Clinical Manager™, the award-winning foundation of the integrated Sunrise clinical suite; Eclipsys Medication Management Solutions™, an end-to-end medication management solution including the new Sunrise Medication Manager™ pharmacy system; Sunrise Ambulatory Care Manager™ and Sunrise ED Manager™, designed for the unique information needs of the fast-paced ambulatory and Emergency Department environments; Sunrise Clinical Manager with Critical Care Solutions™ for the information-intensive critical care environment; and Sunrise Discovery™, a leading-edge healthcare business intelligence solution.

Along with the Sunrise clinical suite's advanced capabilities and embedded best-practice clinical content, UHHS also saw considerable advantages in the solutions' open, XA™ extended architecture. This enables any healthcare organization to quickly and easily extend and integrate Eclipsys solutions to communicate with other clinical, non-clinical and legacy systems.

"Eclipsys is looking forward to expanding its long-standing relationship with University Hospitals Health System by providing a fully integrated electronic medical record across the entire UHHS enterprise," said R. Andrew Eckert, Eclipsys president and chief executive officer. "With evidence-based content integrated into the Sunrise clinical suite and uniquely delivered at the point of care and broadly across the enterprise wherever decisions are made impacting patient care, Eclipsys will help UHHS achieve its patient outcomes, satisfaction and research objectives, while continuing to save more lives."

UHHS has utilized the Eclipsys Sunrise Decision Support Manager™ management information system for many years, as well as the company's heritage Eclipsys 7000™ clinical information system at its University Hospitals of Cleveland flagship facility.

Improving Patient Access, Satisfaction and Care Quality Throughout the Region

"After a comprehensive review and analysis, UHHS has determined that implementing electronic health record technology throughout our health system will help us achieve our strategic objectives of advancing clinical quality and enhancing patient satisfaction," said Thomas F. Zenty III, president and chief executive officer of University Hospitals Health System. "The new system will also enable UHHS to improve patient access and achieve greater operational efficiencies system-wide. We look forward to finalizing our contract with Eclipsys and moving into the implementation phase of this important effort."

Nathan Levitan, MD, UHHS chief medical officer, said that "We look forward to our electronic health record solution. Eclipsys has a proven reputation with many major healthcare institutions and we see great benefit in leveraging Eclipsys' experience deploying clinical systems in the academic, community hospital, ambulatory, and primary care settings. The EHR will further enhance the already excellent care at UHHS."

About University Hospitals Health System

University Hospitals Health System's 947-bed, tertiary medical center, University Hospitals of Cleveland (UHC), is an affiliate of Case Western Reserve University (Case). Together, they form the largest center for biomedical research in the State of Ohio. The System provides the major clinical base for translational researchers at the Case Research Institute, a partnership between UHC and Case School of Medicine, as well as a broad and well-characterized patient population for clinical trials involving the most advanced treatments. Included in UHC are Rainbow Babies & Children's Hospital, among the nation's best children's hospitals; Ireland Cancer Center, designated by the National Cancer Institute as a Comprehensive Cancer Center (the nation's highest designation); and MacDonald Women's Hospital, Ohio's only hospital for women.

Committed to advanced care and advanced caring, University Hospitals Health System offers the region's largest network of primary care physicians, along with outpatient centers and hospitals. The System also includes a network of specialty care physicians, skilled nursing, elder health, rehabilitation and home care services, managed care and insurance programs. For more information, go to www.uhhs.com.

About Eclipsys

Eclipsys is a leading provider of advanced clinical, financial and management information software and service solutions to more than 1,500 healthcare facilities. Eclipsys empowers healthcare organizations to improve patient safety, revenue cycle management and operational efficiency through innovative information solutions. For more information, see www.eclipsys.com or email info@eclipsys.com.

Statements in this news release regarding UHHS contracting for Eclipsys software and the benefits provided by Eclipsys software and services are forward-looking statements and actual results may differ from those projected due to a variety of risks and uncertainties. The arrangement between UHHS and Eclipsys is subject to negotiation and documentation. Implementation and customization of Eclipsys software is complex and time-consuming. Results depend upon a variety of factors and can vary by client. Each client's circumstances are unique and may include unforeseen issues that make it more difficult than anticipated to implement or derive benefit from software or services. The success and timeliness of the company's services will depend at least in part upon client involvement, which can be difficult to control. The parties may reduce the scope of the planned agreement or terminate contract negotiations. More information about company risks is available in recent Form 10-K and other filings made by Eclipsys from time to time with the Securities and Exchange Commission. Special attention is directed to the portions of those documents entitled "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations." Eclipsys Knowledge-Based Charting™ Selected by Fairview Health Services, Minneapolis, MN

— *Solution Integrates Interdisciplinary Evidence-Based Practice Guidelines at the Point of Care* —

Boca Raton, FL — January 30, 2006 — Eclipsys Corporation® (NASDAQ: ECLP), The Outcomes Company®, today announced that Fairview Health Services, an integrated health network based in Minneapolis, MN, has added Eclipsys Knowledge-Based Charting, an advanced clinical documentation solution, to its purchase of Eclipsys Sunrise Clinical Manager™, which is currently being activated.

Knowledge-Based Charting provides clinicians with immediate access to an interdisciplinary professional practice framework and more than 180 clinical practice guidelines (CPGs). Knowledge-Based Charting is embedded into the Eclipsys Sunrise™ advanced clinical suite and delivers the latest interdisciplinary, evidence-based practice guidelines enterprise-wide. As a result, Knowledge-Based Charting seamlessly integrates best practices from multiple disciplines at the point of care to help individualize and improve care delivery, boost efficiency and reduce complications. Eclipsys developed Knowledge-Based Charting through the CPM Resource Center™ (CPMRC™), a wholly owned subsidiary, and it continues to update and develop CPGs.

Fairview Health Services is currently deploying Knowledge-Based Charting with activation scheduled for July 2006 through March 2007 at four of its hospitals — Fairview Ridges Hospital, University of Minnesota Medical Center, University of Minnesota Children's Hospital, and Fairview Southdale Hospital. Sunrise Clinical Manager and Knowledge-Based Charting expand the number of Eclipsys solutions at Fairview Health Services, which currently uses Sunrise Decision Support Manager™, Sunrise Record Manager™ and Sunrise Critical Care™.

"Knowledge-Based Charting accelerates practice and culture transformation by integrating content, workflow and documentation, helping to deliver true practice interoperability across the enterprise," said R. Andrew Eckert, Eclipsys president and chief executive officer. "The combination of evidence-based content with our workflow-enhancing technology makes Knowledge-Based Charting a valuable solution for any complex nursing and interdisciplinary healthcare environment."

"Knowledge-Based Charting will support our clinicians by providing clinical information that enhances critical thinking and decision making focused on outcomes," said Judy Pechacek, chief nursing officer at Fairview Southdale Hospital. "The inherent flexibility of Sunrise solutions and Knowledge-Based Charting will help our clinicians see the context of what matters most by having the technology and practice support to make significant advances in care delivery."

"Knowledge-Based Charting is unique because it elevates the level of practice for better patient care by bringing pre-configured, up-to-date, evidence-based content directly to each clinician at the moment he or she is caring for the patient," said Michelle Troseth, RN, MSN, CPMRC vice president of Point-of-Care Automation and Eclipsys chief professional practice officer. "This helps healthcare organizations raise the level of care they deliver while ensuring that care is consistent across the enterprise."

About Fairview Health Services

Fairview Health Services is redefining the delivery of healthcare through an integrated health network providing care from prevention and disease management to the most complex of life-threatening injuries and illnesses at its seven hospitals and 50-plus clinics located across Minnesota. Fairview, the University of Minnesota Academic Health Center and the University of Minnesota Physicians partner to educate and train two-thirds of Minnesota's healthcare professionals and provide medical services to citizens from across the

Eclipsys Sunrise ED Manager™ Activated at New York University Medical Center

**— Advanced ED Software Expected to Speed and Improve Emergency Care
in Busy New York City Emergency Department —**

Boca Raton, FL — February 1, 2006 — Eclipsys Corporation® (NASDAQ: ECLP), The Outcomes Company®, today announced that New York University (NYU) Medical Center, New York, NY, has activated the company's Sunrise ED Manager in the medical center's Emergency Department in midtown Manhattan. The Level II trauma center treats approximately 35,000 patients each year.

Sunrise ED Manager supports Emergency Department clinicians who must make decisions quickly and keep track of several patients in varying stages of care. By providing the right clinical information at the point of care at the right time in the patient's course of treatment, Sunrise ED Manager facilitates optimum workflow, efficiency and accuracy in the unpredictable Emergency Department. In addition, by automating functions such as registration, triage, patient tracking, physician orders, documentation and prescription writing, the system helps Emergency Departments streamline workflows and improve patient outcomes.

"We're proud to be a part of NYU Medical Center's successful deployment of Sunrise ED Manager and to continue our long partnership with this prestigious healthcare provider," said R. Andrew Eckert, Eclipsys president and chief executive officer. "NYU Medical Center shares the Eclipsys Vision of Health™ in which information is always available to clinicians across the organization — including the fast-paced Emergency Department — enabling the best possible decisions and patient outcomes."

"Eclipsys has been a terrific partner," said Pravene Nath, MD, senior director of Information Technology and assistant professor of Emergency Medicine for NYU Medical Center. "We never felt that the success or failure of the project was ours alone. We have always believed that it was a shared effort and we are happy that it has become a shared success."

One of the key features of Sunrise ED Manager is an electronic ED Display Board, which replaces the traditional "white board" on which clinicians would manually track a patient's location and status. Because tracking information is displayed on large-screen monitors, NYU's ED staff can now track patient location, status and result availability at a glance, which reduces response time and improves outcomes. Driven by a highly configurable rules engine, Sunrise ED Manager enables NYU's ED clinicians to create color-coded alerts and custom-configured columns.

NYU Medical Center is a long-time user of Eclipsys clinical solutions, having first implemented the company's heritage Eclipsys 7000™ system in the early 1980s. Using the E7000™, NYU Medical Center has been widely recognized as the first hospital in the world to achieve 100-percent computerized physician order entry (CPOE). The hospital is now in the process of installing Eclipsys' latest-generation solution, Sunrise Clinical Manager™.

Because Clinical Manager and ED Manager are integrated components of the Sunrise™ advanced clinical suite and share a common architecture and clinical data repository, they support continuity of care across the organization. As a result, inpatient clinicians are able to see all orders, results, treatments, and triage notes entered on the patient's ED record, eliminating the need to re-order already completed tests or make new clinical observations for the patient's record. This level of integration eliminates duplication and unnecessary actions, allowing healthcare organizations to improve clinical operations and care delivery.

About New York University Medical Center

NYU Medical Center, one of the nation's premier centers of excellence in healthcare, scientific research and medical education, consists of two hospitals, Tisch Hospital and the New York University School of Medicine. Tisch Hospital, an acute-care general hospital of 704 beds, contains important treatment and diagnostic units and is a focus for a wide spectrum of regional patient care programs. Rusk Institute of Rehabilitation Medicine is the world's first facility devoted entirely to rehabilitation medicine. NYU School of Medicine spans a history of excellence of more than 160 years in the education and training of physicians, in patient care, and in scientific research. For details, visit www.med.nyu.edu.

About Eclipsys

Eclipsys is a leading provider of advanced clinical, financial and management information software and service solutions to more than 1,500 healthcare facilities. Eclipsys empowers healthcare organizations to improve patient safety, revenue cycle management and operational efficiency through innovative information solutions. For more information, see www.eclipsys.com or email info@eclipsys.com.

Statements in this news release concerning the scope of the agreement and the benefits provided by Eclipsys software are forward-looking statements and actual results may differ from those projected due to a variety of risks and uncertainties. Implementation and customization of Eclipsys software is complex and time consuming. Results depend upon a variety of factors and can vary by client. Each client's circumstances are unique and may include unforeseen issues that make it more difficult than anticipated to implement or derive benefit from the software. The success and timeliness of the company's services often depends at least in part upon client involvement, which can be difficult to control. Eclipsys is required to meet specified performance standards, and the contract can be terminated or its scope reduced under certain circumstances. More information about company risks is available in recent Form 10-K and other filings made by Eclipsys from time to time with the Securities and Exchange Commission. Special attention is directed to the portions of those documents entitled "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations." Eclipsys Signs 10-Year Agreement with Lake Forest Hospital, Illinois, for IT Outsourcing Services

— Eclipsys to Support Mission-Critical Migrations of Clinical and Financial Systems —

Boca Raton, FL — February 6, 2006 — Eclipsys Corporation® (NASDAQ: ECLP), The Outcomes Company®, today announced that Lake Forest Hospital, Lake Forest, IL, has entered into a 10-year agreement with Eclipsys for the company to provide its industry-leading information technology (IT) outsourcing services to support the hospital's main campus and its remote locations. Lake Forest Hospital will also continue to leverage Eclipsys' management decision support solution, Sunrise Decision Support Manager™, which is remote hosted by the Eclipsys Technology Solutions Center in Mountain Lakes, NJ.

Eclipsys provides strategic outsourcing services to support its customers' Eclipsys software and third-party systems. By assuming operational responsibility for key IT initiatives, Eclipsys' outsourcing group delivers greater reliability, cost efficiencies and faster time to value than most healthcare organizations can achieve on their own.

Eclipsys outsourcing services have earned the top ranking for customer satisfaction of healthcare outsourcing services based on KLAS Enterprises' *Professional Services Full IT Outsourcing Study 2005*. A full 100 percent of Eclipsys outsourcing customers participating in the study stated they would buy outsourcing services from Eclipsys again and would recommend Eclipsys outsourcing services to their peers.

"We are excited to expand our relationship with Lake Forest Hospital," said John Adams, Eclipsys executive vice president of Business Solutions. "This significant outsourcing contract is reflective of our leadership role in IT services for the healthcare industry and the confidence that healthcare organizations have in our solutions. We look forward to becoming a close, strategic IT partner with Lake Forest Hospital."

"Eclipsys outsourcing was selected because of its ability to understand our business imperatives as an independent, community-based hospital," said Sean Barden, chief financial officer at Lake Forest Hospital. "The company also articulated viable solutions and demonstrated an ability to support our IT vision. After reviewing Eclipsys' successful track record in systems implementations and support of third-party systems, we were convinced that Eclipsys was best equipped to become our strategic IT partner."

Consistent with Lake Forest Hospital's priorities, Eclipsys will provide support for major financial and clinical information systems projects involving non-Eclipsys information products, while implementing strategies to promote the integration and interoperability among Eclipsys software and the various other information systems installed at Lake Forest Hospital. Eclipsys will also implement its ISO 9001:2000-certified Quality Management System, along with its best practices and proven IT governance model at the hospital. Anticipated benefits for Lake Forest Hospital include improving the end-user's IT experience, enhanced support for clinicians and increased capabilities to meet patient safety and quality objectives.

"Eclipsys' outsourcing services will be the driving force behind Lake Forest Hospital's efforts to maintain competitive IT capabilities and apply them to meet our strategic goals for patient safety, cost-efficiency and clinician satisfaction," Barden said. "We'll especially rely on Eclipsys to help us accomplish the mission-critical systems migrations for both clinical and financial information systems that we have planned over the next three years."

About Lake Forest Hospital Foundation

The Lake Forest Hospital Foundation, Lake Forest, IL, is the umbrella organization for Lake Forest Hospital, Dearhaven Child Care and Learning Center, Lake Forest Health & Fitness Centers, Westmoreland Nursing Center and Women's Auxiliary of Lake Forest Hospital. Lake Forest Hospital (LFH) is a fully licensed and accredited 215-bed community hospital that provides healthcare, community education, prevention, and wellness programs.

With a medical staff of nearly 600 physicians, LFH offers a full range of healthcare services. Lake Forest Hospital has been named the number-one Consumer Choice hospital in Lake County, IL, and Kenosha County, WI, by the independent National Research Corporation for 2005-06. LFH earned the honor for having the best doctors, best nurses, best overall image and reputation and best overall quality. For more information, visit www.lakeforesthospital.com.

About KLAS Enterprises LLC

KLAS is the only independent research and consulting firm that specializes in monitoring and reporting the performance of healthcare information technology vendors and healthcare professional services firms. Eclipsys Advanced Clinical Solutions, IT Services Selected by The Washington Hospital, Washington, PA

—Community Hospital to Utilize Integrated Clinical Suite and Comprehensive IT Services to Transform Care Delivery—

Boca Raton, FL — February 7, 2006 — Eclipsys Corporation® (NASDAQ: ECLP), The Outcomes Company®, today announced that The Washington Hospital, Washington, PA, has selected numerous products from the Sunrise™ advanced clinical information suite. Implementation is scheduled to begin in April at the 265-bed community hospital utilizing Eclipsys implementation and consulting services. The hospital will also leverage the industry-leading services of the Eclipsys Technology Solutions Center in Mountain Lakes, NJ, to remote host the Sunrise solutions.

The Washington Hospital selected the award-winning Sunrise Clinical Manager™, foundation of the integrated Sunrise advanced clinical suite, to provide the hospital's clinicians with an enterprise-wide electronic medical record solution that provides secure, immediate access to patients' complete records and streamlines care processes. A healthcare provider that has implemented extensive automated nursing documentation using the heritage Eclipsys 7000™ system, The Washington Hospital selected Clinical Manager along with Eclipsys Knowledge-Based Charting™ to provide nurses and other clinicians with a new level of integrated, state-of-the-art interdisciplinary clinical documentation including embedded evidence-based practice content.

"We have been an extremely satisfied customer of Eclipsys for many years," said Anne S. Hast, The Washington Hospital's vice president of Patient Care Services. "Now, we are excited about the opportunities the Sunrise solutions present us to improve our clinical automation and support our caregivers in providing world-class care."

In addition to Knowledge-Based Charting and Sunrise Clinical Manager with Nursing Care and Physician Solutions, The Washington Hospital also selected Sunrise Medication Manager™, Sunrise Clinical Manager with Critical Care Solutions™, Sunrise ED Manager™, Sunrise Access Manager™, Sunrise Concurrent Care Manager™, and Sunrise Surgical Manager™, the latter powered by Eclipsys partner Surgical Information Systems.

"Eclipsys solutions will enable us to further leverage technology by extending clinician access to a single patient record from within all departments of our hospital, including the Emergency Department and Critical Care unit," said Telford W. Thomas, president and chief executive officer at The Washington Hospital. "Our patients and staff will be supported by the most sophisticated clinical information system on the market, which will enhance our ability to provide efficient and high-quality healthcare to our community."

"We are extremely pleased that The Washington Hospital has chosen to dramatically expand our long-term partnership through this agreement; that speaks well of both the strength of our relationship and the power of Eclipsys software and services," said R. Andrew Eckert, Eclipsys president and chief executive officer. "By implementing and managing the latest information solutions at The Washington Hospital, we look forward to helping the hospital achieve its efficiency, quality and business objectives."

About The Washington Hospital

The Washington Hospital is a voluntary, not-for-profit community hospital serving Washington, PA, and surrounding communities since 1897. The hospital's main campus is located in Washington, with multiple outpatient services throughout Washington and Greene counties. The hospital has a total of 265 beds, in addition to a 16-bassinet Nursery and an eight-bed residential hospice. The Medical Staff includes more than 350 primary care and specialty physicians. For more information, see www.washingtonhospital.org.

Eclipsys and PanGo Form Partnership to Deliver Advanced RFID Solutions to Healthcare Organizations

— Partners Sign El Camino Hospital, Mountain View, CA as First Customer —

Boca Raton, FL, & Framingham, MA — February 9, 2006 — Eclipsys Corporation® (NASDAQ: ECLP), The Outcomes Company®, and PanGo Networks today announced a joint partnership to help hospitals and other healthcare organizations expand the value of existing wireless and mobile networks using active radio frequency identification (RFID) technology. The companies also announced that El Camino Hospital, Mountain View, CA, is their first joint customer under the partnership.

As a PanGo Certified Solutions Partner, Eclipsys will re-sell, deploy and support PanGo's leading asset-tracking solution. This enables hospital staff to track hundreds of mobile biomedical assets, from wheelchairs to IV pumps to telemetry equipment, instantly identifying available resources and routing them to where they're needed most. In addition, the biomedical engineering department can quickly locate specific equipment for routine equipment maintenance, supporting compliance with stringent Joint Commission on Accreditation of Healthcare Organizations (JCAHO) regulations.

"After evaluating several asset-tracking options, we're pleased to offer PanGo's solution," said Jay Deady, Eclipsys executive vice president, Customer Solutions. "For clients, this partnership means one-stop shopping for wireless and mobile solutions that seamlessly integrate best-in-class healthcare information systems such as our Eclipsys Sunrise™ solutions suite with standards-based, location-aware Wi-Fi technologies."

"Hospitals are seeking to leverage their existing Wi-Fi network infrastructure to provide new levels of information integration," said Mike McGuinness, president and chief executive officer of PanGo. "Partnering with a highly respected company like Eclipsys will help enable healthcare organizations to leverage their existing investments in infrastructure and applications to create new levels of asset visibility and increased productivity."

PanGo's turnkey location management solution includes an intuitive end-user application for asset monitoring and reporting, true Wi-Fi active-RFID tags and a location management platform that integrates location data into third-party and custom healthcare and business applications. PanGo Locator® is the only active RFID solution available today that leverages any Wi-Fi access point infrastructure as its reader network, eliminating the need for a separate and costly overlay of proprietary hardware and wiring.

Implementation Scheduled at El Camino Hospital

The IT leadership at El Camino Hospital, a full-service acute care facility, is recognized throughout the industry for a vision that consistently sets new standards in leveraging innovation. The team turned to long-time information solutions partner Eclipsys for new ways to boost response time and improve efficiency using El Camino Hospital's existing Wi-Fi network. A wireless networking team from Eclipsys will lead the implementation of PanGo's active-RFID technology, scheduled to begin in March.

"Our mission is to deliver the highest quality of patient care, cost-effectively," said Mark Zielazinski, chief information officer of El Camino Hospital. "As the El Camino Hospital campus grows, our technology partners will play an important role in helping ensure that staff efficiency and patient care don't skip a beat."

About El Camino Hospital

El Camino Hospital is a 395-bed hospital located in Mountain View, CA. For more than 44 years, El Camino Hospital has been distinguished by its high-caliber staff and affiliated physicians, comprehensive and innovative services and a long history of responding to the needs of the community it serves. Consistently

ranked as a leading hospital in the area, El Camino Hospital has been designated a Magnet hospital for nursing excellence by the American Nurses Credentialing Center, the credentialing arm of the American Nurses Association. The hospital is also a JCAHO-certified stroke center, a 2005 American Hospital Association Quest for Quality Award finalist, and one of the Top 100 Most Wired Hospitals in the United States.

About PanGo Networks

PanGo is the leading provider of a location-aware platform and applications designed for enterprise scale deployment. Its integrated, Wi-Fi-based location management solution allows organizations to transform standards-based wireless networks into a platform for intelligent applications that improve important business processes. With its flagship PanOS Platform[®] and asset tracking applications, PanGo offers the industry's first complete solution for real-time asset visibility and context-aware information delivery. Specializing in a range of markets including healthcare, manufacturing, retail and government, PanGo delivers reliable and accurate information about the location of connected devices, people and assets. For more information, visit www.pangonetworks.com.

About Eclipsys

Eclipsys is a leading provider of advanced clinical, financial and management information software and service solutions to more than 1,500 healthcare facilities. Eclipsys empowers healthcare organizations to improve patient safety, revenue cycle management and operational efficiency through innovative information solutions. For more information, see www.eclipsys.com or email info@eclipsys.com.

Eclipsys to Showcase Newest Release of Industry-Leading Sunrise Advanced Clinical and Financial Solutions at HIMSS 2006

— HIT Innovator to Show How Integrated Interdisciplinary Evidence-Based Content is Transforming Care Delivery, in Both the Acute and Ambulatory Settings —

Boca Raton, FL — February 12, 2006 — Eclipsys Corporation® (NASDAQ: ECLP), The Outcomes Company®, today announced that it will showcase its industry-leading capabilities to better connect the healthcare team with evidence-based content and transform care delivery at the 2006 Annual Conference and Exposition of HIMSS, the Healthcare Information Management and Systems Society. The event, one of the largest conferences of the healthcare industry, runs today through February 16 at the San Diego Convention Center.

“Eclipsys will showcase how our advanced clinical, financial and administrative software — plus our array of professional services — connect caregivers, administrators and processes to help ensure smooth ‘handoffs’ and eliminate departmental and facility ‘islands of care,’” said Jay Deady, Eclipsys executive vice president, Customer Solutions. “With our latest release, Sunrise 4.5 XA, Eclipsys is taking information technology to the next level, uniquely delivering interdisciplinary, evidence-based content that presents itself seamlessly within the clinician’s workflow. Additionally, the greatly enhanced capabilities in Ambulatory, Critical Care, Emergency Department, Lab, Pharmacy, and Surgery are now available to be licensed in conjunction with the full suite of Sunrise solutions or individually to extend the investment of previously installed systems that lack the industry-leading clinical capability of Sunrise 4.5 XA in these vital clinical areas.”

Harnessing the power of technology, Eclipsys transforms evidence-based knowledge from traditional, static sources, such as medical libraries and peer-reviewed journals, into accessible, dynamic solutions that enhance — rather than disrupt — everyday practice. Eclipsys embeds up-to-date clinical knowledge, representing the clinical expertise of healthcare leaders, into Sunrise Clinical Manager and other advanced clinical solutions through pre-defined order sets, alerts, online references, clinical documentation templates, flowsheets and patient-education materials. Clinicians receive just-in-time knowledge in the context of what they need for their specific patient in a specific situation. The Eclipsys approach to content helps enhance adoption, because clinicians see true value in the solution, and improve outcomes, because best practices are reinforced as clinicians make decisions and care for patients.

New and Enhanced Medication Management in Latest Release

As part of its latest release, Eclipsys has delivered an end-to-end medication management solution that integrates the workflows of physicians as they place orders, pharmacists as they verify and dispense medication orders, and nurses as they administer medications to the patient. This provides significant benefits in efficiency, accuracy and patient safety. Because Eclipsys End-to-End Medication Management Solution™ provides a shared Health Data Repository, is customized for the workflows of a healthcare enterprise’s different environments and utilizes a common architecture, Eclipsys customers can link care providers, operations and the entire continuum of care to achieve unprecedented interoperability.

“With Sunrise 4.5 XA, Eclipsys continues to deliver on its Vision of Health™ to help its customers be the best places to give and receive care,” said R. Andrew Eckert, Eclipsys president and chief executive officer. “We are proud to showcase our most significant Sunrise solutions to date at HIMSS 2006 and demonstrate how the innovative combination of best practices, proven clinical content and industry-leading technology available *today* from Eclipsys is providing our clients with measurable improvements in patient safety and financial and quality outcomes.”

Integrated Remote Hosting, Outsourcing, and Professional Services

In addition to evidence-based software solutions, Eclipsys' industry-leading remote hosting and outsourcing services will also be represented at the booth. A growing number of healthcare organizations are choosing Eclipsys remote hosting services as an attractive alternative to recruiting and building large IT in-house staffs.

Working Together: Eclipsys and Its Customers

Eclipsys thought leaders and its customers are making a number of HIMSS '06 presentations on outcomes gained as a result of using Eclipsys technology to achieve a connected enterprise.

At the booth, **Health First Inc., Rockledge, FL** will highlight its success using Sunrise Clinical Manager and Knowledge-Based Charting™ to improve clinical documentation. In addition, **Community Hospital of the Monterey Peninsula, Monterey, CA** will highlight how Eclipsys revenue cycle management solutions have improved financial outcomes. Other customer presentations will cover how Eclipsys solutions have streamlined ambulatory and physician workflows for improved outcomes.

Other Eclipsys-related HIMSS presentations and special events include:

Sunday, February 12, 8 a.m. to 12 noon — Torrence Room, Convention Center

Topic: "The 80-Percent Solution: Looking After Human Factors" — In this pre-conference workshop, Eclipsys' chief professional practice officer, Michelle Troseth, RN, MSN, will be joined by representatives of Healthlink, an IBM Company, to discuss how IT failures often stem from an unintentional disregard for what informaticians call "human factors." Healthlink presenters include Karen Fuller, RN, BS, BC, and Sam Bierstock, MD, BSEE, chief medical officer.

Monday, February 13, 11:15 a.m. to 12:15 p.m. — Room 29A, Convention Center

Topic: "eMAR Across the Enterprise: Beyond CPOE at ARMC" — This presentation will chronicle the journey of Alamance Regional Medical Center (Burlington, NC) to computerized physician order entry and beyond. Attendees will learn how automating medication administration has helped eliminate transcription, reduce manual steps, better document care and, most importantly, improve patient safety. Presenter Terri Andrews, RN, MBA, is a clinical systems manager at ARMC, an Eclipsys customer that has gained industry recognition for its success in implementing CPOE and other advanced clinical capabilities in the community hospital environment.

Wednesday, February 15, 9:45 to 10:45 a.m. — Room 33C, Convention Center

Topic: "Explore the Potential: Predictive Informatics and EHR Information" — Srinivas Denduluri, an Eclipsys senior product design specialist, will discuss how predictive informatics has the potential to add a new dimension to real-time clinical decision making and long-term disease management by directly and automatically combining current, patient-specific electronic health record (EHR) information with advanced predictive modeling.

Eclipsys Co-Chairs Interoperability Showcase

For the second consecutive year, Eclipsys is co-chairing the HIMSS Conference's Interoperability Showcase, an event that features cutting-edge technology and standards to create an interactive environment where attendees experience interoperability up close and personal. Interoperability will be demonstrated in existing EHR products, including laboratory results, radiology images, medical summaries and cardiology reports. Visitors can create and manage their own virtual health record and access it across multiple healthcare settings within the showcase, which will be structured as a fully functioning HIMSS Regional Health Information Infrastructure Organization (RHIO).

Through the RHIO, visitors will learn how patients can be more active participants in their own healthcare management. Clinical scenarios will be enabled by the standards-based Integrating the Healthcare Enterprise (IHE) framework, demonstrating how different companies incorporate interoperability into their products.

Exclusive Sponsor of Pharmacy IT Symposium

Sunday, February 12, 8 a.m. to 5 p.m.

San Diego Marriott Hotel & Marina

In Sunday's HIMSS Pharmacy IT Symposium, exclusively sponsored by Eclipsys, attendees will learn how to maximize and develop their role during the emergence of RFID (radio frequency identification) technology. They will also discover other new technologies that continue to perfect the implementation of the EHR and reduce errors in the Pharmacy setting. Continuing education accreditation will be provided with the support of ASHP, the American Society of Health-System Pharmacists. This part of the program includes e-prescribing, data management, drug interactions, productivity enhancement and quality gains.

Eclipsys Hosts New HIMSS Analyst Breakfast

Tuesday, February 14, 7- 8:30 a.m.

HIMSS Analyst Breakfast with Gartner

San Diego Marriott Hotel & Marina

At HIMSS '06, Eclipsys will host its first-ever HIMSS Analyst Breakfast, featuring guest speaker Barry Hieb, MD, research director of Gartner Healthcare. Dr. Hieb will provide insights into the latest trends in healthcare practice and technology interoperability. Attendees will be encouraged to ask questions during a Q&A session to follow. Eclipsys President and Chief Executive Officer R. Andrew Eckert will also give a brief presentation.

The Canadian Reception at HIMSS

Monday, February 13, 6:30 to 8 p.m.

San Diego Marriott Hotel & Marina

Eclipsys is proud to be a sponsor of the Canadian Healthcare Information Technology Trade Association (CHITTA) Reception at HIMSS '06. CHITTA and HIMSS Ontario have partnered to host this time-honored networking event for the Canadian community attending HIMSS.

Putting You On the Fast Track

While Eclipsys Sunrise™ solutions can put healthcare organizations on the fast track to improved outcomes, the company can also meet one lucky winner's need for speed in other ways at HIMSS. Attendees to the Eclipsys booth can register to win a free, one-week rental of a Porsche® 911® Carrera®, one of the world's finest and fastest performance cars. See www.eclipsys.com for more details.

Post-HIMSS Webinar on Integrating Clinical, Financial Workflows

For those unable to join Eclipsys at HIMSS, thought leaders from the company's Clinical Leadership Team will host a special webinar entitled "No Department's an Island: How to Integrate Clinical and Financial Workflows" on Tuesday, March 21 from 2 to 3 p.m. Eastern. Diane Gilbert Bradley, MD, Eclipsys chief medical officer, and Hans Boerma, MD, vice president of Clinical Solutions, will showcase ways a healthcare organization can create truly interdisciplinary clinical teams to optimize patient care. Presenters will discuss how to integrate clinical functions with financial operations to speed billings and maximize reimbursements, and how to fine-tune clinical workflows using advanced decision support tools, connecting clinical and financial processes across a complex, ever-changing healthcare enterprise.

To register for this free event, see the WebInform link on the home page of www.eclipsys.com.

About HIMSS

The Annual HIMSS Conference and Exhibition brings together nearly 20,000 healthcare professionals from around the world to learn about the latest information technology. The 2006 conference will feature almost 700 exhibitors and more than 200 educational sessions, workshops, roundtables, electronic poster sessions, vendor product sessions and emerging technology sessions. For more information, see www.himss06.org.

About Eclipsys

Eclipsys is a leading provider of advanced clinical, financial and management information software and service solutions to more than 1,500 healthcare facilities. Eclipsys empowers healthcare organizations to improve patient safety, revenue cycle management and operational efficiency through innovative information solutions. To discover how Eclipsys can start "Working Together" with your organization to make the dream of practice and technology interoperability a reality, see www.eclipsys.com or email info@eclipsys.com.

Statements in this news release concerning the benefits of using Eclipsys software to achieve integrated care delivery and save time, costs and lives are forward-looking statements and actual results may differ from those projected due to a variety of risks and uncertainties. Implementation and customization of Eclipsys software is complex and time-consuming. Results depend upon a variety of factors and can vary by client. Each client's circumstances are unique and may include unforeseen issues that make it more difficult than anticipated to implement or derive benefit from software. More information about company risks is available in recent Form 10-Q and 10-K filings made by Eclipsys from time to time with the Securities and Exchange Commission. Special attention is directed to the portions of those documents entitled "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations." Eclipsys Clinical Advantage™ Implemented at William Osler Health Centre

— *Canadian Healthcare Provider First to Activate New Eclipsys Solution that Extends Investment in Existing System* —

Boca Raton, FL — February 14, 2006 — Eclipsys Corporation® (NASDAQ: ECLP), The Outcomes Company®, today announced that William Osler Health Centre, Etobicoke, Ontario, is the first healthcare organization to activate the Eclipsys Clinical Advantage (ECA) advanced clinical information solution. The new Eclipsys product offering was activated late last fall at the 276-bed William Osler Health Centre – Etobicoke General Hospital.

ECA is comprised of Sunrise Clinical Manager™, the foundation of the Eclipsys Sunrise™ advanced clinical information suite, and The Shams Group Astro Interface Engine to enable real-time integration with MEDITECH Magic and/or client/server applications. As a result, ECA provides healthcare organizations with all of the advantages of Eclipsys' industry-leading Sunrise Clinical Manager solution, while enabling them to retain the financial and informational investments in their existing MEDITECH systems.

While care providers work exclusively within Sunrise Clinical Manager and utilize the clinical information system's powerful workflow advantages — which at Osler currently includes evidence-based clinical content within context and advanced interdisciplinary clinical documentation — ancillary department personnel can continue using the MEDITECH system with no change to the system or existing workflows. The advanced scripting technology underlying the Astro Interface Engine enables real-time synchronization with the MEDITECH system without the need for point-to-point interfaces. As a result, patient data entered into Sunrise Clinical Manager flows directly to the Astro Interface Engine, essentially making Sunrise Clinical Manager act as a module within the MEDITECH system. This greatly simplifies integration and maximizes system performance.

"We have developed this new solution set to enable progressive organizations such as William Osler Health Centre to add all of the advantages of our Sunrise Clinical Manager and its comprehensive clinical decision support capabilities and robust functionality, while continuing to derive value from their existing MEDITECH investment," said R. Andrew Eckert, Eclipsys president and chief executive officer. "With ECA, William Osler Health Centre is now positioned to achieve its goals of increasing physician adoption of a computerized physician order entry (CPOE) system and providing a complete electronic health record for every patient."

After activation, William Osler nurses quickly began using the Emergency Department Tracking Board and structured note creation for triage of incoming Emergency patients. Physician adoption is considered excellent, with doctors utilizing the system to review new results, reports and documents, as well as historical information on patients who have been treated previously.

About William Osler Health Centre

William Osler Health Centre is one of the largest hospital corporations in Ontario, with approximately 600 beds, 3,700 staff, 670 physicians and 1,000 volunteers. The organization includes two acute care sites in Etobicoke and Brampton, with construction underway for a new acute care facility, the 608-bed Brampton Civic Hospital, projected to open in fall 2007. The new Brampton Civic Hospital is estimated to accommodate 90,000 emergency patient visits, 160,000 ambulatory care visits and 160,000 outpatient visits annually. For details, see www.williamoslerhc.on.ca.
