# The Solution to Patient Safety

*In the Palm of Your Hand*

IntelliDOT's best-in-class wireless Barcode Point-of-Care (BPOC) solution optimizes patient safety workflows at the bedside – including safely administering medication with just one hand. But that's not all. The CAREt® System can also be used for blood administration, specimen collection, vital sign documentation, as well as tracking infant breast milk administration. All this from one wireless handheld device weighing just 8oz.

Even better, the CAREt System connects to any HIS system and can be implemented in as little as four months. And because it was designed by nurses for nurses, acceptance and satisfaction are extremely high so you maximize ROI.

Enhance patient safety, increase nurse efficiency and improve the bottom line with the CAREt System.  
*It's what's missing at the bedside.*

*Adverse Drug Events are getting plenty of media attention these days. The good news is you can guard against them. All the time. Every time.*

IntelliDOT's CAREt® barcode point of care system is the first wireless, nurse-centric workflow manager to connect caregivers with the information systems they need at the point-of-care. Designed by nurses for nurses, a straightforward user interface guides staff through medication administration workflows, Five Rights checking and related documentation, including vital signs – all at the bedside using a single handheld, lightweight unit. But that's not all. The CAREt System can also be used for blood administration, specimen collection, as well as tracking infant breast milk administration.

Get the complete story. Contact IntelliDOT to see how the CAREt System can enhance patient safety and quality of care while increasing nurse satisfaction and completely eliminating serious errors.
