

Learn how to keep a lid on problems at our free seminar

You lost two days making changes to the wrong version of the software. That "fixed" bug reappeared. Again. And only half the specified features were completed successfully. Sound familiar?

One solution to these recurring pains is to adopt a requirements-driven development process that is tightly integrated with analysis, design, development, test and change/configuration management. Because this provides full traceability, smooth workflow from requirements to products, and faster response to change, you can be confident that your projects always meet specified requirements and standards.

So if just thinking about your last development project makes you squirm, you definitely need to attend our **free local seminar** courtesy of Telelogic - the market and technology leader for requirements management (RM) with DOORS® and change and configuration management (CM) with Synergy™. Sign up and you'll get to explore requirements-driven development from the perspectives of an analyst, architect, designer and programmer through an in-depth, multi-product demonstration.

Who Should Attend?

Software Developers, Requirements Analysts, Software Development Managers, Project Managers, Product Managers, Business Analysts, Project Team Leaders, Quality Assurance Managers and more.

What Will I Learn?

How to integrate a requirements-driven development process into your organization and how an analyst, architect, designer and programmer can leverage both requirements and change/configuration management to improve quality and productivity.

Why Should I Attend?

If you want to get every project right the first time - even if you have a distributed or global development organization - don't miss this one-time event. By attending, you'll receive a free 30-day evaluation copy of DOORS to help you get started in delivering better systems and software faster.

Register for the Seminar: *"Increasing Predictability, Quality and Productivity with Requirements-Driven Development"*

May 20 - **Chicago**, Hilton on Michigan Avenue

LEARN HOW TO PUT A LID ON DEVELOPMENT PROBLEMS

Attend our Requirements-Driven Development Seminar

Requirements-driven development lays the foundation for tight integration between requirements and analysis, design and test. This provides full traceability, smooth workflow from requirements to products, and faster response to change. As a result, requirements-driven development - when combined with robust change/configuration management - can help organizations improve productivity and project quality, while containing costs. Supported and enabled by the right family of tools, a requirements-driven development process can be largely automated so as not to burden already stretched resources.

Our local seminars provide a great opportunity to get an in-depth look at what requirements-driven development is all about. See how it can ensure a project's compliance to specified requirements and standards. Learn how it can aid communication and collaboration - even for distributed or global development teams. Then experience the benefits of requirements-driven development through a portfolio of development tools from the perspectives of an analyst, architect, designer and programmer. It all takes place in one of six free local seminars. After the 90-minute seminar there will be 30-minute open Q+A session with the presenter.

Space is limited so reserve your seat today!

Seminar: *"Increasing Predictability, Quality and Productivity with Requirements-Driven Development"*

The increasing complexity of today's applications can make systems and software development a real can of worms - which is why the industry has significantly increased its focus on requirements management. This has improved control over requirements and established the foundation for a major advance in the engineering of complex systems and software.

LEARN HOW TO PUT A LID ON DEVELOPMENT PROBLEMS

It's virtually impossible to develop quality systems and software without robust requirements management (RM) and change/configuration management (CM) processes. Telelogic, the leading global provider of solutions for advanced systems and software development, is the industry innovator and technology leader in both disciplines. But you don't have to take our word for it. Download the following industry analyst reports and read why DOORS for requirements management and Synergy for change and configuration management set the standard in the industry.

Attend our Requirements-Driven Development Seminar

Was your last project late? Over budget? Did it include features no one needed or lack the functionality everyone wanted? If it turned out to be a real can of worms consider adopting a more robust requirements management (RM) and change/configuration management (CM) process. Telelogic - a leader in both disciplines- can show you how in our free local seminars.

Space is limited so reserve your seat today!
