The sustainable solution
for premium water...

Born in Sweden

A hand in a dark suit jacket is pouring clear water from a glass carafe into a row of glasses on a dining table. The glasses are filled with water, and some have a light-colored beverage. The background is a blurred dining table with white linens, silverware, and a blue plate with the number '19'.

Meet Nordaq

Described as 'the purest tasting water' by the best chefs and sommeliers around the world.

We make water taste like water and everything else taste to its full potential.

We are still and sparkling water, tapped and capped on site.

Water as nature intended.

We offer an environmentally
sustainable, cost-effective
alternative
to single-use water products

What our clients are saying...

Chef Thomas Keller
The French Laundry and Per Se

"Nordaq has developed the greatest water system available."

Jens Dolk
Wine Critic & Restaurant Owner

"Water from Nordaq makes both water and wine taste better. Serving environmentally friendly water without transportation today feels like a no brainer – everything else would be idiotic."

Chef André Chiang
Sichuan Moon

"By switching from bottled water to Nordaq, we can produce the best quality still and sparkling water in-house and serve it fresh. It is just like growing your own vegetables in the backyard."

Chef Mathias Dahlgren
Michelin-star winning Swedish Chef

"I've been a client for over 10 years. In addition to the high quality and great taste of the water, Nordaq's sustainability efforts makes them a great partner for our restaurants, as that is an important aspect in all our businesses."

Preferred water to 155 Michelin stars

For a clean planet

Nordaq is served in beautifully designed, sustainable and re-usable glass bottles.

On-site bottling eliminates shipping and transportation costs while reducing vehicle emissions.

Our bottles

**For
a superior
taste**

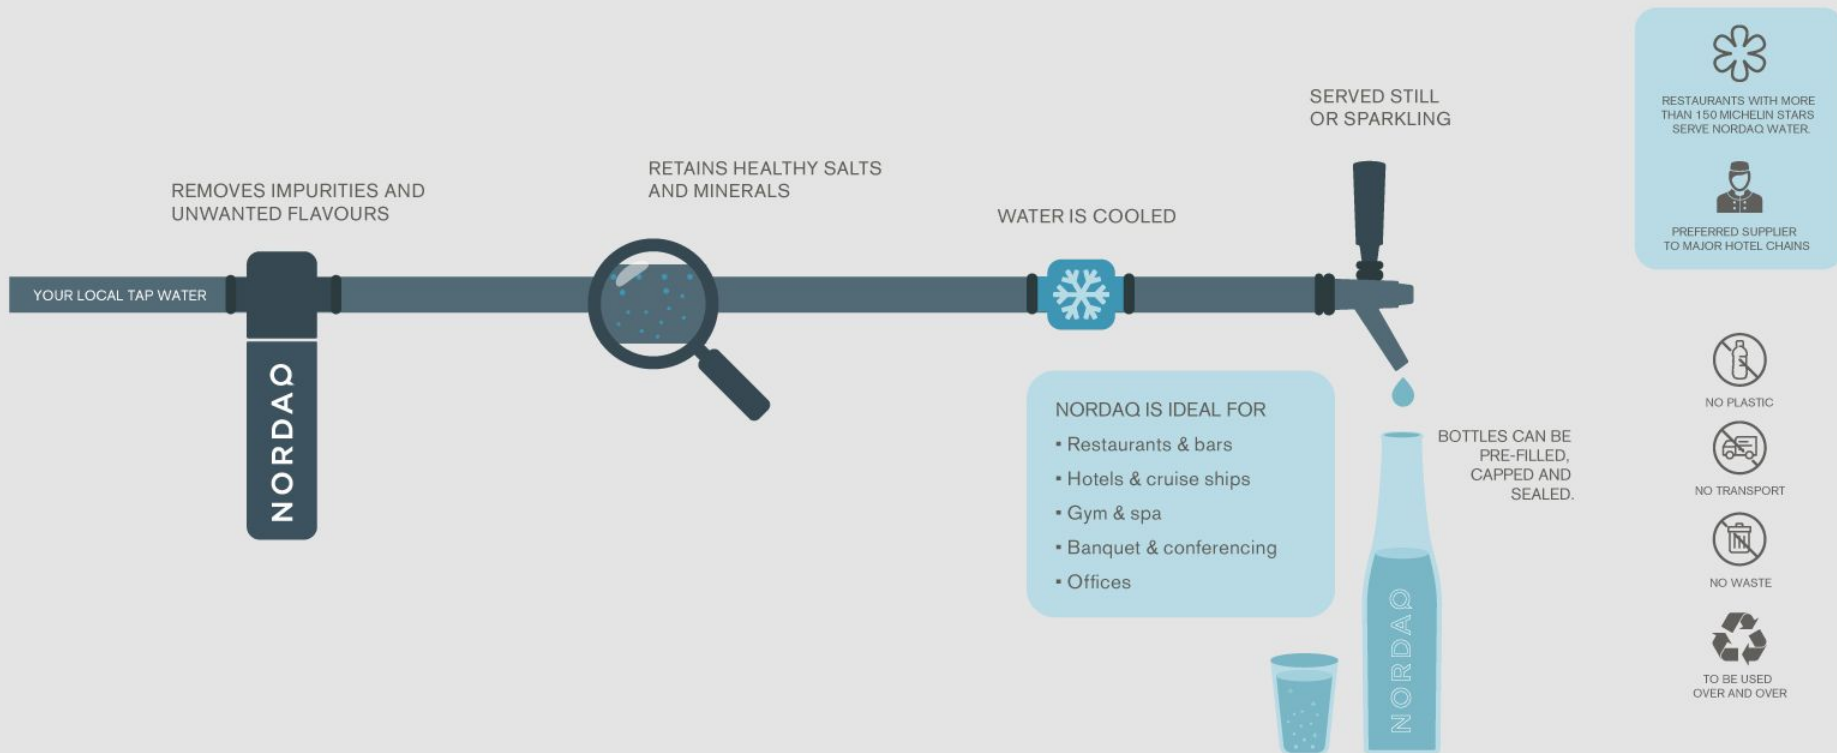

Nordaq's patented filtration system purifies tap water into a perfectly neutral result, without taste, smell, or impurities.

It removes even the smallest particles that other filters miss, while maintaining salts and natural minerals.

The result is a balanced, neutral and rounded taste that will enhance the natural flavor of wine and food.

How a manual system works...

How an automated system works...

NORDAQ REFILLING SYSTEMS

BOTTLES ARE FILLED, CAPPED, SEALED AND DATE-LABELLED
