

Secure Print Technologies, LLC

TRM-C 400 MICROSCOPE

Excellent tool to authenticate a secure document or label that contains micro-tagants. This light weight handheld device can identify micro-tagants as small as 5μ within seconds, separating a genuine document or label from a fake.

The TRM-C 400 is also used in the flexo printing industry to view anilox cells close up. If the printer is experiencing color inconsistency or color strength issues, this could be the result of plugged cells, even though you cleaned your anilox roll. This tool will identify wear, damage and plugging that otherwise would not be noticeable.

FEATURES AND BENEFITS

- Optical Magnification 400X
- Field of View 0.465mm
- Controls ON/OFF Switch
- Illumination Technique Coaxial Power Source
- 3 AAA Batteries - Included
- White LED
