Top Railing Profiles

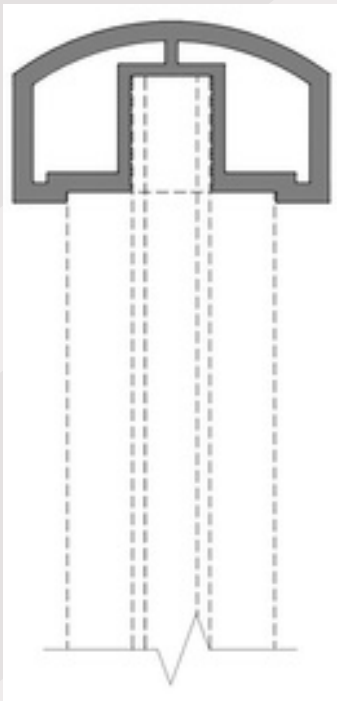

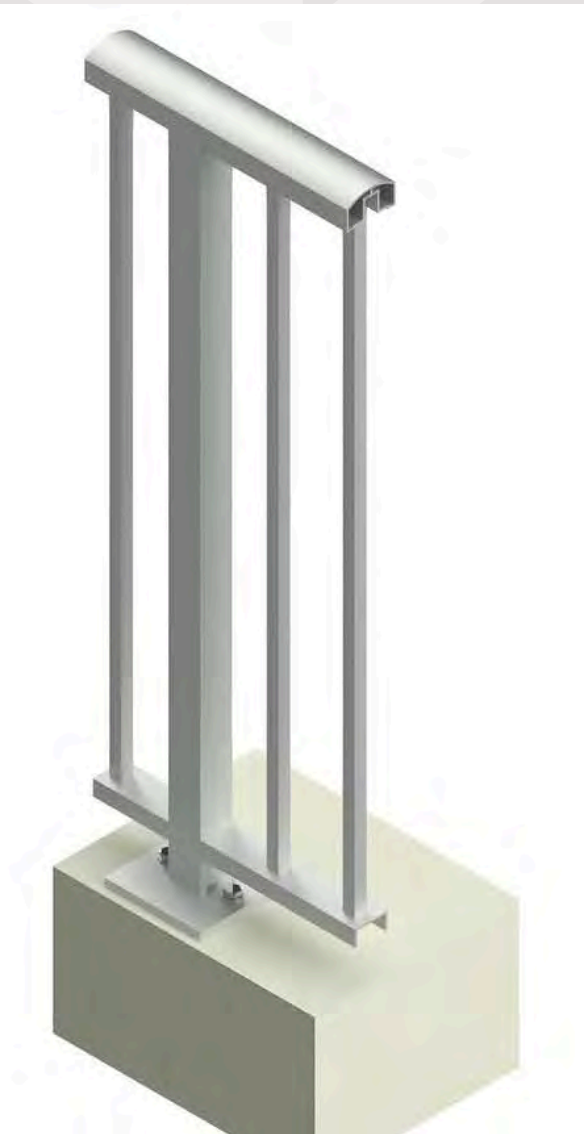

At Highrise Products, we take pride in manufacturing the market's safest and most long-lasting products. We steer clear of the risks associated with value engineering, ensuring the highest quality. Each HRP railing system is crafted to meet project-specific design loads while enhancing architectural aesthetics. All extrusions are from structural grade alloys and designed with safety and comfort in mind.

As a by-product of this early design decision, all railing profiles meet the minimum thickness requirement to be a part of your building's lightning plan. **Lightning safe is our standard.**

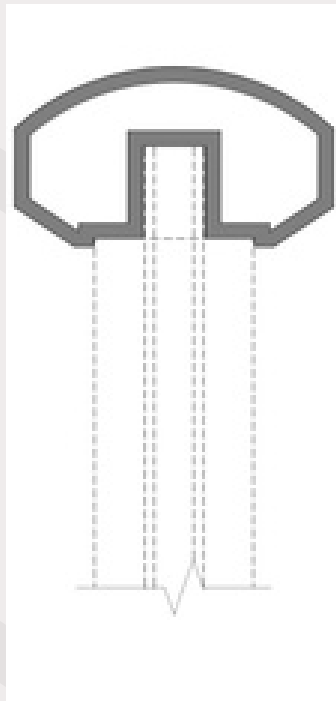

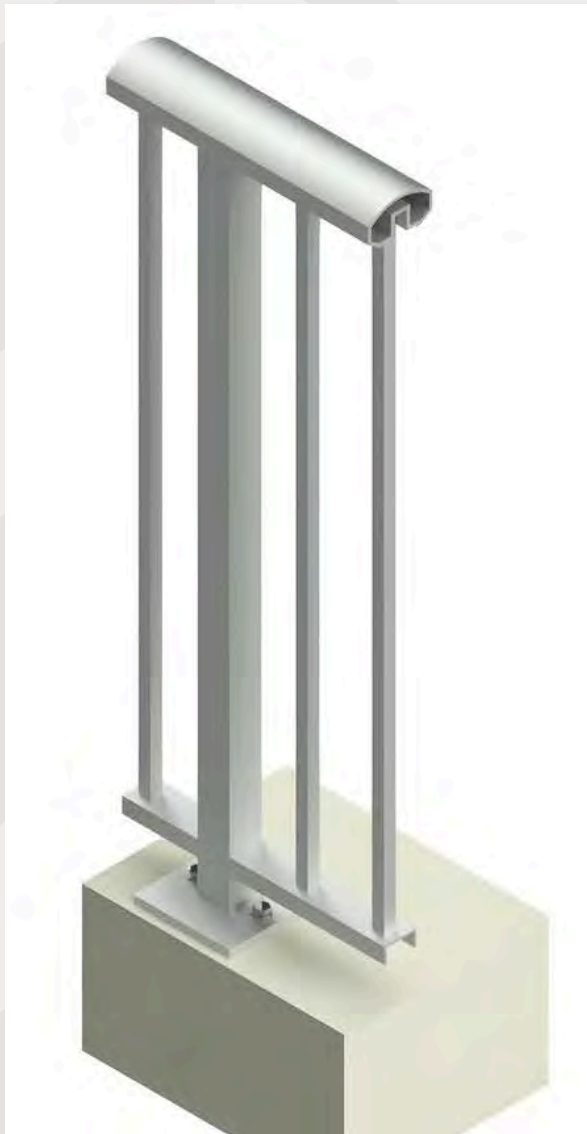

Highrise Products offers a wide range of options to cater to your needs. If you require something beyond our current selection, don't hesitate to reach out. We are delighted to create a custom profile that meets your specific requirements!

Finishes

With a wide range of colors and finishes, durability and weatherability, Architectural Powder Coating is the ideal coating option for high traffic areas like architectural railing.

Pure fluoropolymer powder coating resin not only meets all AAMA specifications, but is environmentally responsible and can help contribute to LEED points.

- Average material efficiency up to 95%
- Single coat application of 2-4 mil thickness
- Overspray can be reclaimed
- One coat application*
- Solvent Free
- No Hazardous waste generated
- No volatile organic compounds
- Environmentally friendly and not hazardous to spray operator

**Coastal regions may require more coats and/or primer*

Mounting Options

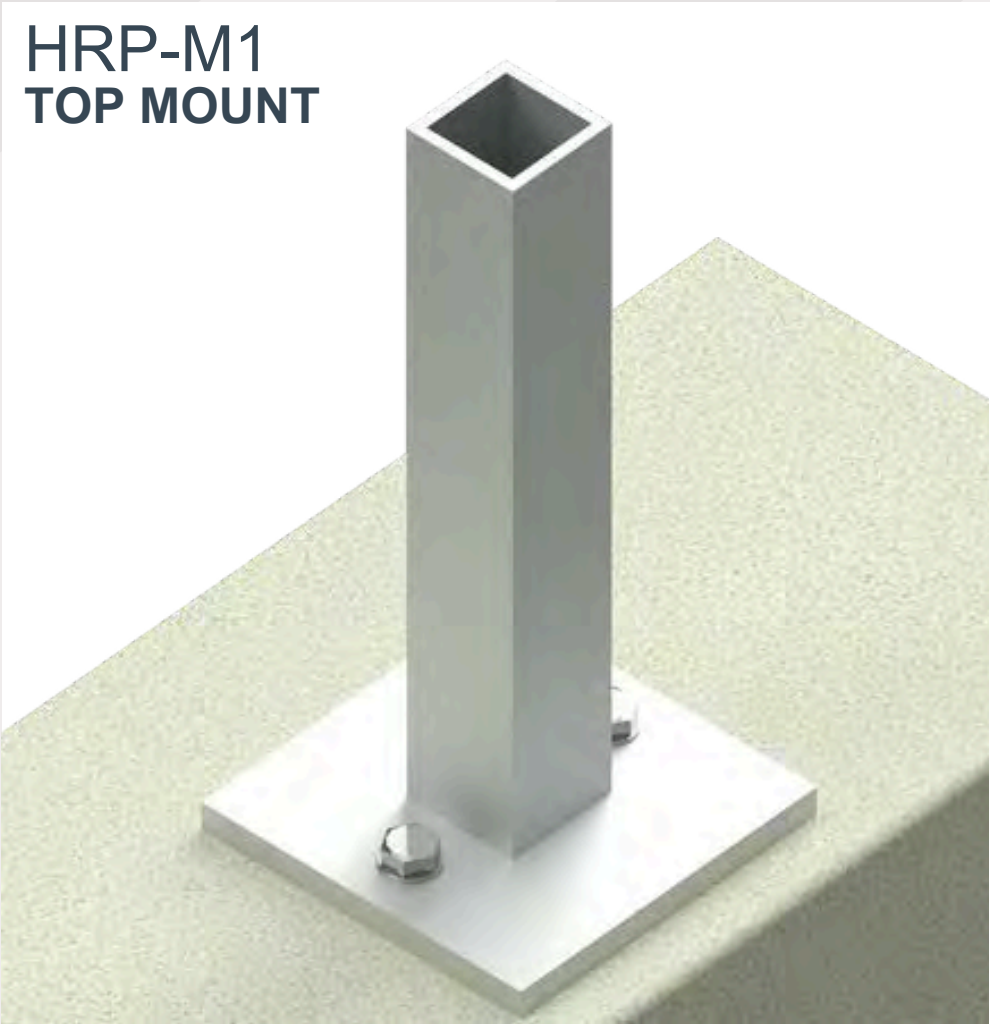

There is no one size fits all mount for railings. Each job is unique, and presents one-of-a-kind set of challenges.

Highrise Products has a wide range of standard mount profiles, and is also ready, willing and able to tackle any challenge.

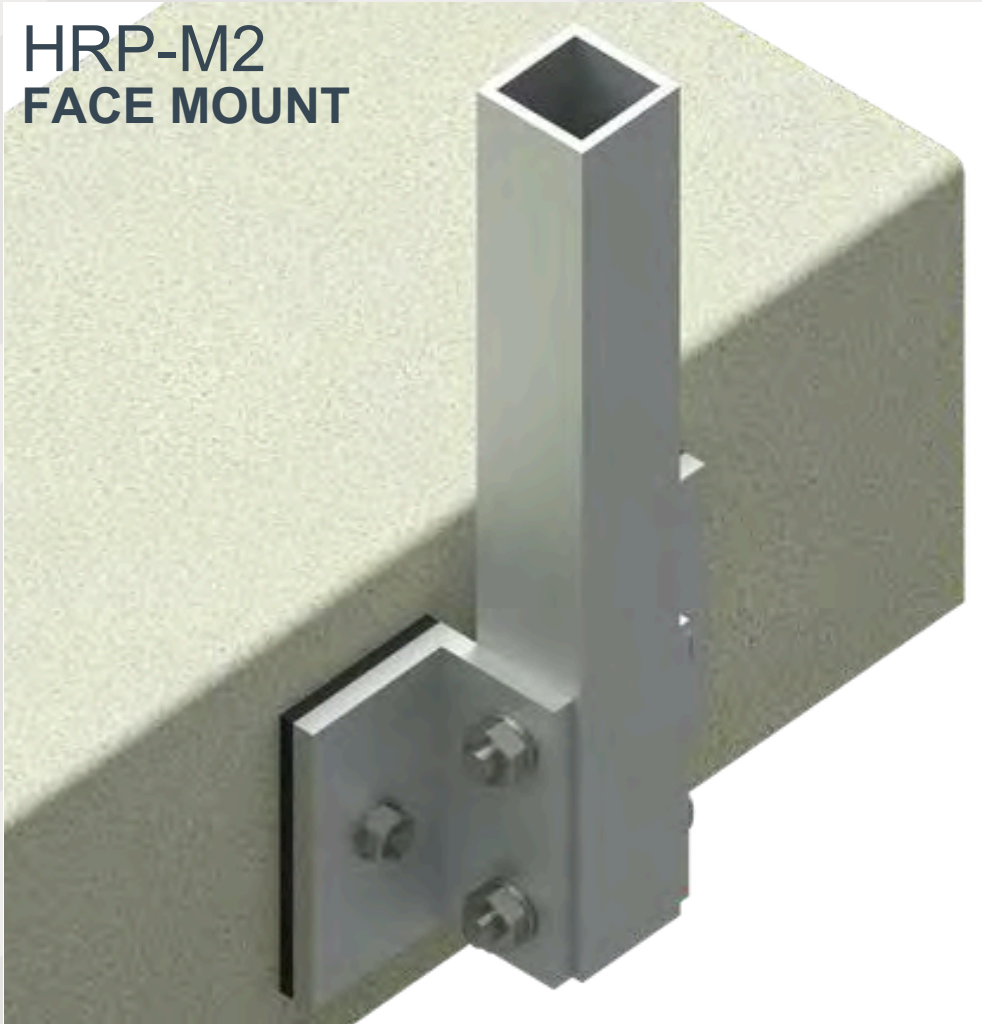

Highrise Products is committed to reducing our carbon footprint and partner with the greenest extruders in the country. We are rapidly moving to Net Zero embodied carbon in all our products.

STANCHION MOUNT

The majority of high-rise buildings feature various railing systems, chosen for a variety of reasons. These selections can range from aesthetic preferences to engineering solutions to comply with building codes.

While it's rare for high-rise buildings to have entirely picket railings, there is typically some form of picket rails incorporated into all projects.
