What is VR - definition

Virtual reality (VR) - is
a simulated experience that can be
like or completely different from the
real world.

Co-funded by the
Erasmus+ Programme
of the European Union

Other Definitions

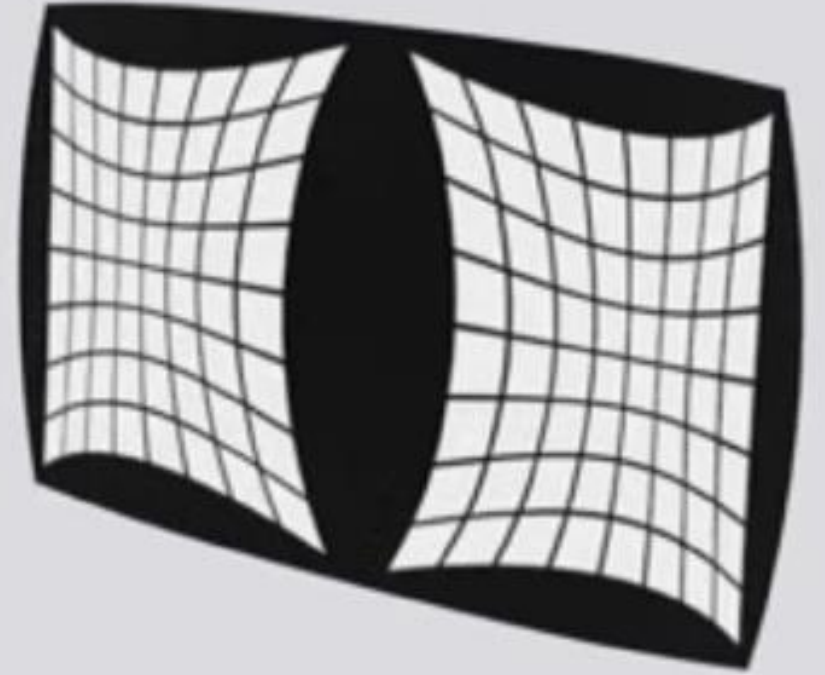

Virtual reality is...

electronic simulations of environments experienced via head-mounted eye goggles and wired clothing enabling the end user to interact in realistic three-dimensional situations.

(Coates, 1992)

an alternate world filled with computer-generated images that respond to human movements.
(Greenbaum, 1992)

an interactive, immersive experience generated by a computer (Pimental 1995)

Augmented Reality Definition

Defining Characteristics [Azuma 97]

- Combines Real and Virtual Images - Both can be seen at the same time
- Interactive in real-time - The virtual content can be interacted with.
- Registered in 3D - Virtual objects appear fixed in space.

Co-funded by the
Erasmus+ Programme
of the European Union

2008 - CNN

A TV first, CNN debuts their newly installed hologram system.

of the European Union

Nintendo Pokemon GO

It is a geolocation-based game from 2016 that allows users to imagine a virtual world that is superimposed on to the real world. They can see Pokemon characters only by looking “through” their smartphone screen.

AR vs VR

	Virtual Reality	Augmented Reality
Scene generation	Requires realistic images	Minimal rendering
Display device	Fully impressive, wide field of view	Non immersive, small field of view
Tracking	Low to medium	The highest accuracy possible

Milgram's Reality-Virtuality continuum
