- 1) Microblading** is a technique of cosmetic tattooing performed specifically on the eyebrows. Like earlier methods of cosmetic tattooing, it is done by manually depositing pigment into the skin. The unique formation of microblading needles allows the artist to create the look of real eyebrow hairs by tattooing very fine hair-like strokes in the skin.

Perfect for those with non-oily skin.

(Illustration for informational purposes only and not indicative of size, color or shape.)

- 2) Microblading & Light Shading (Combo Brow):** adding a light shading effect will give brows more depth & dimension.

Perfect for those with non-oily skin looking for a 3D effect.

(Illustration for informational purposes only and not indicative of size, color or shape.)

- 3) Wow Brow**, is a combination of microblading and shading (blade & shade). Any combination (25%-50%) blading and 25-50% shading.

Most Popular & looks great!

(Illustration for informational purposes only and not indicative of size, color or shape.)

- 4) Ombre Powder Brow** is more like a traditional tattoo and involves the application of thousands of extremely fine dots of pigment, inserted into the skin, gradually building up a color and defined shape, but solid (without hairstrokes) unlike microblading.

Best option for those with oily skin.

Which of the design techniques do you prefer? (Circle One)

1) Microblading 2) Combo Brow 3) Wow Brow 4) Ombre Powder Brow

Have you previously had **ANY** microblading, manual shading or machine shading?

Yes _____ No _____
