

# INDUSTRIAL CLEANING

**ESS is recognised for our outstanding performance and safety record** cleaning liquid, dry bulk storage vessels, fluid collection pits, Industrial buildings, Environmental clean-up across a broad spectrum of industries.

**With over 10 years' experience serving customers throughout Thailand and South East Asia.** Our qualified manpower and equipment can remove a multitude of waste types and can arrange for proper transportation and disposal at a government licensed facility. Having the right approach and knowledge on site keeps operational downtime to a minimum. Our equipment can be tailored to your requirements and regardless of your scope of work our cleaning systems can provide an engineered solution which guarantees results.

**We can also optimise your waste management costs to ensure you do not incur excessive disposal costs.** Some examples of this are De-Watering technologies to remove suspended solids. The clarified fluid can then be filtered to remove any remaining contamination thus minimising overall volumes of water waste and significant cost savings.

We have a range of chemical engineering applications to speed up the cleaning process

- *De-Contamination*
- *De-Greasing*
- *De-Scaling*
- *De-Watering*
- *Deep Cleaning*
- *Rust Removal*
