

1. CLEAN

Wipe clean the window or surface you are applying the decal to with a mild cleaner and make sure the surface is grease free. Methylated spirits or similar works well. Allow to dry.

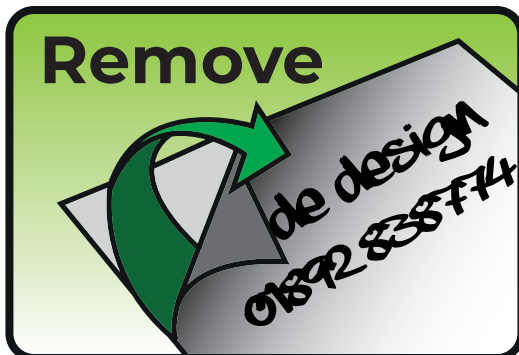

2. PEEL

Carefully peel off the backing paper from the decal. If any of the decal should remain on the backing, replace and rub gently. *(only the vinyl on the application paper should remain).*

3. APPLY

Place your decal on the window. Use a credit card or similar to rub and smooth the decal onto the chosen surface. Starting at one edge and releasing the air from underneath the decal.

4. REMOVE

Now remove the application paper from the decal by peeling it off from the corner and keeping quite close to the decal. Water can be wiped over the application paper for easier removal. *(only the decal should now remain).*
