CERVICAL SPINE 4 Views (Obliques)

History: 3 week hx of right cervical radiculopathy after lifting weights in the gym. No hx of trauma.

Procedure: AP and lateral views of the cervical spine are supplemented with right and left oblique views.

Findings:

A shallow left cervicothoracic convexity is identified. There is slight reversal of the cervical lordosis with anterior carriage of the head. The bone density is normal. The dens and atlantodental interspace are normal. Moderate disc narrowing and spondylophyte formation are identified at C5-C6 and C6-C7, with mild narrowing and spondylophyte formation at C4-C5. Mild right facet hypertrophy is present at C4-C5 and C5-C6. Mild right uncovertebral hypertrophy is visualized at C5-C6. Mild osseous neural foraminal narrowing is present at C5-C6 on the right. The upper lung fields are clear.

Impression:

1. Moderate degenerative disc disease at C5-C6 and C6-C7. Mild degenerative disc disease at C4-C5.
2. Mild right facet arthrosis at C4-C5 and C5-C6.
3. Mild right uncovertebral arthrosis at C5-C6.
4. Mild right osseous neural foraminal stenosis at C5-C6.
5. Postural alterations.
