QUALITY • DIVERSITY • ECONOMY

DRIVEN BY CUSTOMER DEMAND

For over 45 years, we've served our valued, worldwide customers by providing clamps that are built to suit a wide variety of industrial and OEM applications. Because whether you need a clamp to push, pull, hold down, lock, position, or tighten, we'll either help you find exactly what you need in our catalog, or we'll modify one of our standard clamps to your exact specifications, or we'll custom-build a clamp for you!

Our caring, highly skilled staff is devoted to helping you design a system that will solve both the ordinary and repetitive, and the unique and situational work-holding needs. With vertical, horizontal, and push/pull action, toggle clamps offer the flexibility to provide solutions in manufacturing, assembly, storage, machine building, and shop use.

We manufacture over 350 models of toggle clamps, and our new product development is ongoing and is driven by customer demand. We pride ourselves on featuring a line of clamps that offers more variety than the competition, and we are continually seeking new designs to fill a need that has not yet been met. We react to you, our valued customers, with urgency and sincere interest in meeting your requirements. We remain driven to satisfy, driven to deliver a clamping line that exceeds your expectations in quality, diversity, and economy.

Please contact us and tell us how we can best serve you...

GOOD HAND™ QUALITY ASSURANCE

- All die-stamped steel parts are deburred, cleaned, and zinc-plated for a finish that resists corrosion and creates a smooth, easy to clean surface.
- Toggle mechanism designed to allow maximum clearance for ease of loading and unloading work-pieces.

Flanged Washers are supplied with all U-bar and open bar models. Bolt retainers are supplied with all solid bar models.

GH-12205

Hand grips are covered with an oil and stain resistant red vinyl or red plastic for easy identification and to assure the safety and comfort of the operator.

TOGGLE ACTION

The theoretical maximum holding of clamping force of a toggle action device is achieved when the three pivot points are in a straight line. To make allowance for external forces due to vibration and changing load conditions in industrial use, the proper amount of over travel of the center pivot point has been carefully calculated to yield maximum clamping pressure, while achieving a positive locking position.

HOLDING CAPACITY AND CLAMPING FORCE

All GOOD HAND™ clamps are rated by their "holding capacity." This rating is the maximum force the clamp will support when locked in the closed position without creating permanent deformation. This force is measured at a point closest to the base and diminishes as the end of the bar is reached. The "clamping force" is defined as the actual force being applied by the clamp to the workpiece. This rating is not constant due to such variables as the location of force on the handle, the amount of force the operator applies, and the location of the spindle on the hold-down bar.

NOTE: Engineering changes, dimensions and specifications referenced in this catalog are subject to change without notice.

Look for this logo throughout our catalog to see our clamps with unique features such as:

- **Higher Base** (Greater clearance)
- **Side Mounting** (Saves fixture space)
- **Yokes** (Clamp 2 parts with 1 stroke)
- **Long U-Bolts** (Extend the reach of Latch Clamps)
- **Reverse Action** (Lowers the profile of Push Pull clamps)

Series 304 & 305

All six of these push/pull clamps have a ductile iron base for close fit machining, strength and durability. All the shafts are ground to fit the reamed hole, so the plunger can be used for locating purposes as well as clamping. The plunger locks in both forward and retracted positions. The H model clamps are made with hardened pins and bushings for durability.
