

# NutraFolate™

## BIOACTIVE FOLATE L-5-METHYLTETRAHYDROFOLATE

### KNOW YOUR FOLATES

- Folic Acid and Folate are essential to body functions.
- Folates in foods are highly unstable.
- Folate deficiency can result in many health problems.
- Folic acid itself is not biologically active.

### L-5-METHYLTETRAHYDROFOLATE

- L-5-Methyltetrahydrofolate, the biologically active form of Folic Acid, is the predominate form of folate found in foods.
- An estimated 60% of the population has a genetic enzyme defect called MTHFR gene mutation, which makes it difficult for them to convert Folic Acid into the active L-5-Methyltetrahydrofolate form.
- Approved in USA, EU, Australia and New Zealand for use as a source of folates in food and dietary supplement products.

### NUTRAFOLATE™

- Calcium L-5-Methyltetrahydrofolate
- CAS No.151533-22-1
- Assay > 95% (USP/JECFA Compliant)
- D-5-Methylfolate < 1% (USP/JECFA Compliant)
