

NASA Space App Challenges 2021 - Virtual Planetary Exploration V2.0

Team-Out Of Space

Jeffrey Li, Ethan Song, Lucas Jin

Magikid Labs Chino Hills CA

For this years NASA space app's competition, we chose Virtual Planetary Exploration V2.0. The challenge was to create 3D models of future tools that may be useful to planetary geologists.

Our web-based app allows viewers to explore 3D models of planetary geology tools, as well as a short description of how they work.

Viewers can explore common tools through 3D model apps, such as Blender, or Tinkercad. If these apps are unavailable, screenshots and information are also provided on the webpage.
