PREFERRED FIBER INFORMATION FOR TOMMY BAHAMA APPAREL

Preferred fibers are those that make a smaller environmental and/or social impact than their conventional counterparts. Tommy Bahama uses Textile Exchange's Preferred Fiber and Materials Matrix to help define its preferred fibers. Styles indicating the use of preferred fibers are subject to change. The information below is not intended to be used for marketing purposes.

MANMADE CELLULOSIC FIBERS (MMCFs)

MMCFs are made from wood pulp, derived from trees or plants. Conventional MMCFs can be made with wood harvested from ancient or endangered forests, use significant amounts of harmful chemicals, water, and energy to produce, and emit large amounts of greenhouse gases.

LENZING™

Lenzing™ is a leading manufacturer of preferred MMCFs, including Tencel™ Lyocell, Tencel™ Modal, and Lenzing™ EcoVero™ Viscose. Lenzing™ sources fibers through responsibly-managed forests certified to FSC and PEFC standards. They also process the fiber responsibly, using processes that recapture most of the chemicals used in production and minimize water and energy use.

- Tencel™ Lyocell production recycles process water and reuses the solvent at a recovery rate of more than 99.5%.
- Tencel™ Modal production causes around 81.5 percent less greenhouse gas emissions than generic Modal, and Tencel™ Modal fibers are STANDARD 100 by OEKO-TEX® certified.
- Lenzing™ EcoVero™ Viscose has up to 50% fewer emissions and 50% less water impact than conventional viscose.

BIRLA CELLULOSE

Birla Cellulose is another manufacturer of preferred MMCFs. Birla's wood sourcing policies meet stringent global standards, with certifications like FSC, PEFC, and SFI. Birla works to reduce the water and energy used in and waste generated by fiber production.

COTTON

Conventional cotton is natural and renewable, but it may be grown using GMO seeds, large amounts of water, and hazardous chemicals in pesticides, insecticides, and defoliants. Cotton growing can also result in water and soil contamination, soil degradation, and biodiversity loss.

ORGANIC COTTON

Organic cotton is grown organically, from non-genetically modified plants and without the use of synthetic chemicals in fertilizers, insecticides, and pesticides. Its cultivation helps build organic matter in the soil and air, reduce water contamination, increase soil fertility and biodiversity, reduce human and wildlife health hazards, and reduce greenhouse gas emissions resulting from the production of synthetic fertilizers and pesticides.

BETTER COTTON

Tommy Bahama joined Better Cotton (BC) in 2020 to demonstrate our commitment to improving cotton farming globally. BC is the world's leading sustainability initiative for cotton. Their mission is to help cotton communities survive and thrive, while protecting and restoring the environment.

Better Cotton is sourced via a chain of custody model called mass balance. This means that Better Cotton is not physically traceable to end products; however, Better Cotton farmers benefit from the demand for Better Cotton in equivalent volumes to those we source.

POLYESTER

Conventional polyester is derived from petroleum, a non-renewable resource with complicated social and political implications. Polyester's production generally requires high amounts of energy, may pollute water, and emits large amounts of greenhouse gases.

RECYCLED POLYESTER

Recycled polyester can be sourced from factory waste, unused fabric (deadstock), or reclaimed plastic bottles. It lessens the use of petroleum as a raw material, diverts plastic and fabric waste from landfills, and reduces greenhouse gas emissions.

REPREVE® POLYESTER

REPREVE® Polyester is made from recycled plastic bottles. It keeps bottles out of landfills and oceans, conserves energy and water, and reduces greenhouse gas emissions and petroleum use.

COOLMAX® ECOMADE POLYESTER

* EcoMade Polyester is made from 100% recycled PET bottles or 100% pre-consumer textile waste from cutting rooms, helping to keep waste out of landfills and reduce petroleum use.

DUPONT™ SORONA®

Sorona® polyester is made in part from renewable plant-based ingredients and can be recycled in any normal polyester recycling stream. Its manufacturing process results in lower greenhouse gas emissions than conventional polyester.

NYLON

Conventional nylon, like polyester, is derived from petroleum. Nylon's production can be associated with multiple environmental harms such as the depletion of non-renewable resources, high energy use, wastewater pollution, and high greenhouse gas emissions.

RECYCLED NYLON

Recycled nylon can be sourced from factory scraps, discarded fishing nets, carpets, or other used textiles. It reduces reliance on petroleum, diverts waste from landfills, and generally requires less energy to produce.

CASHMERE

Cashmere is a premium fiber, but conventional practices can contribute to significant environmental impacts and animal welfare abuses. Over-grazing by cashmere goat herds has led to land degradation, which has been linked with biodiversity loss. In addition, conventional cashmere production has been linked to mistreatment of animals.

THE GOOD CASHMERE STANDARD® BY ABTF

With the purchase of a product carrying The Good Cashmere Standard® by AbTF trademark, you contribute to the welfare of cashmere goats, the protection of the environment, and better working conditions for the local farmers and farm workers in Inner Mongolia. The Good Cashmere Standard® by AbTF trademark stands for your contribution to promoting a sustainable and transparent cashmere production.

MARKETING

POINT OF SALE MATERIAL, IMAGERY AND ADVERTISING

Tommy Bahama is committed to helping you promote our products in your store. New materials are available three times a year for the Spring (February), Summer/Fall (June) and Holiday (October) seasons. Due to usage agreements with models and photographers, we ask that you remain current with our new materials every six months. You can access all current, approved materials on our image site, ***tbwholesalemessaging.com***

Our image site will allow you to:

- › Access current line sheets
- › Download and review the Tommy Bahama Brand Guidelines
- › Order POS materials, including postcards, counter cards and posters available free of charge
- › Obtain the Tommy Bahama logo for use
- › Download seasonal images to use in store and for your advertising needs. All in-store visuals and advertising must be reviewed and approved by Tommy Bahama Marketing. The images on our site are low resolution for you to place in a proof. Once your proof is ready, please email it to imageadv@tommybahama.com for review.

Please keep the following in mind:

- Tommy Bahama imagery and logos cannot be altered in any way or used in an ad promoting any other brand or service.
- Under no circumstances can Tommy Bahama be advertised off-price.
- Approved ads and imagery may be used for six months and should be changed when new imagery is made available.
- If you wish to produce materials that don't meet these requirements, please contact Tommy Bahama Marketing to determine if participation is possible.
