## MATH FACT PROFICIENCY TEST

This time test is included to help you confirm that your student has truly memorized math facts, and as reinforcement every few weeks to ensure that they still know them. No addition or multiplication signs are noted on the problems so that you can use the test for addition or multiplication. Instruct your student to go as fast as they can, skipping any answers they cannot immediately write. This will expose potential problem areas. Start at different places each time you test to prevent memorization of answers.

You have reached the optimum proficiency when the student cannot write the answers as fast as the answer comes to them.
