

<p>It is important to make sure the information is current. To check, plug in your Offline Encyclopedia product and check the wikipedia_en_all_maxi file. Keep the date shown on the right side in mind as we go through the instructions. 2025-08 meaning current information as of August 2025.</p>	
<p>Go to your web browser and type in dumps.wikimedia.org</p>	
<p>A page titled "wikimedia downloads" will appear. Scroll down and click the link that says "Kiwix files"</p>	<p>Kiwix files Static dumps of wiki projects in OpenZim format</p>
<p>Click on wikipedia/.</p>	
<p>There will be a large list of links that show up. On the keyboard press CTRL+F at the same time and type wikipedia_en_all_maxi. The date on the right hand side of the link is what tells you when the information was updated. If the date on your USB is older than the one shown here, it can be updated. Keep in mind, the flash drive included is 128 GB so as of February 2026 there isn't much room to account for updates. My next product line will include a 256GB flash drive which will allow more space for future updates.</p>	
<p>There is enough room for the February 2026 dump. If your file is outdated, navigate to your flash drive file and right click the wikipedia_en_all_maxi file. Click delete.</p>	
<p>On your web browser, click the latest version of the Wikipedia, as of these instructions it is the 2026-02 file. There will be a large download. The finished files will appear in your computers downloads folder. Perform these steps in the following order: Right click on the downloaded files. In the box that pops up, click show more options at the bottom. Hover over "send to" then move your mouse to the right hand box that shows up. Click on your Offline Wikipedia flash drive.</p>
