

Evidence of Authorship & Cognitive Processing Statement (EACB)

Violet A. Newborn | 2026

Purpose

This document provides clarification of authorship and cognitive processing style related to submitted academic work. It serves to demonstrate that the structure, language, and integration present in my writing are internally generated and consistent with my documented learning framework.

Learning & Processing Profile

My cognitive process is best described as non-linear, pattern-based, integrative, and experiential. I synthesize information internally through lived experience, observation, and pattern recognition before translating that understanding into written form. This often results in work that appears fully integrated without visible step-by-step construction.

Authorship Clarification

All submitted work reflects my own lived experience, cognitive processing, and language. The structure of my writing is a result of internal synthesis rather than external generation.

Supporting Publication

Newborn, V. A. (2026). The Newborn Method™: A Non-Clinical Framework for Readiness, Capacity, and Expression in Nontraditional Learners. Zenodo. <https://doi.org/10.5281/zenodo.19487745>

Clarification of Misinterpretation Risk

Due to the nature of integrative, non-linear processing, my work may appear highly synthesized, lack visible sequential steps, and differ from traditional student output. This can be misinterpreted within systems that rely on linear demonstration of learning.

Statement of Integrity

I affirm that my work is my own and that I have not misrepresented authorship. I remain open to demonstrating understanding and authorship through alternative formats if required.

Closing

This statement is provided to support accurate interpretation of my work and to ensure alignment between my demonstrated learning and institutional expectations.
