

This is the small seeded variety of Vicia fava used for cover crops. Fava beans are an annual used mainly as a plow down to build organic matter and add nitrogen to the soil. Fava beans have strong stems to support their upright growth (3-7 feet tall), which also act to support other legumes when they are mixed together. Fava beans have a thick tap root which can help to loosen heavy soils.

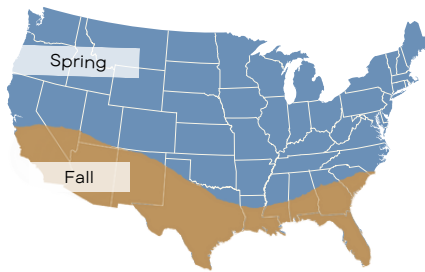

## SERVICE

## QUALITY FORAGE

## INNOVATION

### PLANTING ZONES

### PLANTING TIMES

• Spring

### PLANTING RATES

- Drilling / 140 lbs. per acre
- Broadcast / 150-170 lbs. per acre

### PRODUCT BENEFITS

- ✓ Increased Yields
- ✓ Root Rot Tolerance
- ✓ Improved Seed Quality
- ✓ Phoma Tolerance
- ✓ Rebuilds Soil
- ✓ Protein Content

### Soil & Moisture:

**Adaptable to a wide range of soil types and conditions. For maximum yield and quality results we recommend irrigation and a good fertility plan with your trusted agronomist.**
