"We work with seasoned professionals who are committed to exceeding your expectations."

LETTER FROM THE GENERAL MANAGER

On behalf of myself and the entire team, I want to take a moment to express our gratitude for your support and loyalty towards our company. We are deeply committed to providing you with the best possible experience and want you to know a few key points.

Firstly, your satisfaction is our top priority. We strive to meet and exceed your expectations in every interaction you have with us. Secondly, we are constantly working towards improving our products and services. We closely listen to your feedback and suggestions in order to enhance your experience and tailor our products to better suit your needs.

Furthermore, we take our responsibilities towards you and the environment seriously. We are committed to ethical business practices, sustainability, and social responsibility. We believe that doing good for our customers and the world is not only essential but a fundamental part of our company's mission. Lastly, Your support and trust have allowed us to grow as a company, and we are forever grateful. We are always here to assist you and ensure your satisfaction.

Once again, thank you for choosing us. Our entire team is dedicated to providing you with an exceptional experience and the best products on the market. We look forward to continuing our journey together.

Brad Herb
General Manager
of Agrifor Seeds

About Agrifor Seeds

Agrifor Seeds is a wholesale seed supplier. Producing seed in the heart of Willamette Valley Oregon and in the high deserts of Utah. As a result, we specialize in the production and distribution of seed products with a keen focus on catering to different climate conditions, we offer an extensive collection of products that are tailored for either a mild cool season or a challenging high desert climate.

Main Warehouse Located in Corinne Utah

Our customer service begins from the moment you place an order and continues even after the product has been delivered.

We are here to help you sow excellence and reap success with every acre. You can find us at our main warehouse located in Corinne Utah or at our production office in Lebanon Oregon.

Our Goal

We aspire to continually create forage products that improve kinetic digestibility to achieve healthier livestock. That is why we seek the highest quality in every seed bag.

In addition to providing suitable seed, we recognize the importance of achieving healthier livestock for sustainable agricultural practices. We offer specialized feed products and nutritional solutions that enhance the overall health and well-being of livestock. By tailoring our products to meet the specific dietary requirements of different livestock, Agrifor Seeds enables farmers to optimize the growth, productivity, and resilience of their animals.

Doing what's right for the farmer has and always will be our goal. We are committed to farmers and aim to help maintain the long-term health of their livestock and land.

*"Doing what's right
for the Farmer!"*

"Sow excellence and reap success with every acre."

Better together

Collaborating with farmers

We believe in the power of collaboration and actively seek feedback and input from farmers. By involving them in decision-making processes and listening to their concerns, we can better understand their needs and work towards mutually beneficial solutions. We understand that the success and well-being of farmers is crucial for a sustainable and thriving agricultural industry. Therefore, we will continue to advocate and prioritize their needs and interests.

Looking forward

We have found the best way to get quality results is with up front research. Quality is and always will be our assurance. At Agrifor Seeds, we are constantly striving to combine tried-and-true techniques with new technologies in order to streamline and enhance the quality of our seed.

Embracing innovation and technology

We recognize the importance of innovation and technology in improving farming practices and increasing efficiency. We strive to stay up-to-date with the latest advancements in agricultural technology and provide farmers with access to innovative tools and solutions that can help them overcome challenges and achieve sustainable growth.

Providing access to resources and knowledge

We understand that farmers require access to resources such as quality seed, fertilizers, and logistics, as well as proper knowledge and training on all products. We aim to provide them with these essential resources to enhance their productivity and improve their yields.

Our Services

"The highest quality in every bag."

Our customer service begins from the moment you place an order and continues even after the product has been delivered. When it comes to packaging and bagging seed, Agrifor focuses on providing a wide range of options to meet the diverse needs of our customers. Whether you need small consumer-size bags or large bulk totes, we are able to cater and assist in choosing the most suitable packaging solutions.

Our service extends beyond the order placement process, we ensure prompt and efficient delivery and strive to improve with each shipment. Here at Agrifor Seeds we understand the importance of consistently delivering high-quality products and will prioritize customer satisfaction.

Forage mixtures provide a diverse range of food sources for livestock, allowing them to meet their nutritional requirements more effectively. Below are a few key benefits that come with our mixes.

- ✓ Awnless
- ✓ Excellent hay
- ✓ Excellent silage
- ✓ Excellent tonnage
- ✓ Increased NDFd
- ✓ Highly palatable
- ✓ Rust tolerant
- ✓ Good straw strength
- ✓ Adapted for various climates
- ✓ Increase harvest window

Sonic barley is primarily grown for its high nutritional value and serves as an outstanding feed source for livestock. Sonic is rich in essential nutrients such as protein, carbohydrates, and fiber enhances the overall animal performance. Characterized by its rapid growth and ability to adapt to various growing conditions, Sonic withstands both drought and cold temperatures allowing farmers a reliable feed source for their livestock. Its deep root system helps prevent soil erosion, improves soil structure, and enhances nutrient uptake. Sonic is a popular choice for farmers looking to enhance their livestock feed sources and promote sustainable farming practices.

Silver is a beardless spring barley that has multiple benefits and is commonly planted as hay or silage crop. It is rich in essential nutrients such as protein, fiber, vitamins and minerals and serves as a valuable feed source for livestock. Most livestock generally find Silver highly palatable, leading to increased feed intake. Silver is a cool season annual small grain that is taller and leafier than other barley varieties. And with a rapid maturing rate Silver Spring Barley will make an excellent option for double cropping scenarios. It can also help improve soil structure, prevent erosion, and enhance organic matter content, promoting overall soil health and fertility.

- ✓ Traffic Tolerant
- ✓ Mixtures are based on precipitation available
- ✓ Handles Minimal Precipitation

Soil & Moisture:

Soil & Moisture: In many areas of the intermountain region soil is traditionally alkaline with an extreme high pH and very little moisture. Often the main source of precipitation comes from snowmelt. Snowmelt is stored in the soil for plants to utilize through the dry season. Rainfall is a critical part of rangeland productivity however rain can be sporadic and difficult to predict a consistent amount of rainfall each season.

Southpaw is an exceptional grass species that offers a multitude of benefits. Its diploid nature provides it with improved vigor and performance, while its dense growth and vibrant green color make it visually appealing. Its high forage quality and adaptability to different soil types and climates make it a valuable asset. Whether used for erosion control, forage production, or to enhance the beauty of a landscape, Southpaw annual ryegrass is a top choice that delivers on all fronts.

Fast Break tetraploid is a valuable addition to the agricultural industry. Its high yield potential, strong persistence, and excellent forage quality, make it a sought-after cultivar among farmers and livestock owners. It can easily withstand heavy grazing pressure, providing a reliable and long-lasting forage source for livestock. Its robust nature allows it to resist diseases, pests, and adverse weather conditions. By incorporating Fast Break into your forage management systems, you can reap the benefits of increased productivity, improved animal performance, and sustained forage supply.

This variety is a high-quality, cool-season perennial forage bunch grass. It is known to be a high-yielder, have high forage quality, have excellent longevity, and be more tolerant of heat and drought than most cool-season grasses. Hyperdrive is hardy, and it has shown an ability to survive wet years as well as dry/hot years, assuring farmers of longer-lasting stands and fewer replants.

PLANTING RATES

- Drilling / 30-35 lbs. per acre
- Broadcast / 40-45 lbs. per acre

PRODUCT BENEFITS

- ✓ Out yields numerous other varieties of timothy, meaning more bales of hay.
- ✓ Excellent regrowth, meaning a greater chance of a high-yielding second cutting.
- ✓ Good longevity, meaning less replanting

Soil & Moisture:

Adaptable to a wide range of soil types and conditions. For maximum yield and quality results we recommend irrigation and a good fertility plan with your trusted agronomist.

KO tall fescue offers beef farmers a versatile and reliable forage option for their cattle. Its ability to withstand harsh weather conditions, and adaptability to different management practices make it a valuable component for beef production. KO Punch tall fescue can be grazed or harvested as hay, giving farmers flexibility in their feeding management. Grazing cattle on lush fescue pastures can promote weight gain and improve overall herd health. When made into hay, this grass retains its nutritional value, providing a reliable feed source during the winter months when fresh forage is limited. Whether grazed or harvested, this grass provides beef cows with the right balance of nutrients for growth, productivity, and overall herd health.

- ✓ Drought resistance
- ✓ Responds well under irrigation
- ✓ Good for hay or grazing

Soil & Moisture:

Adaptable to a wide range of soil types and conditions. For maximum yield and quality results we recommend irrigation and a good fertility plan with your trusted agronomist.

Bighorn is a versatile and valuable grass used in forage production and grassland management. This cool-season perennial grass is highly adaptable and can grow in various soil types and environmental conditions. It offers a balanced mix of proteins, fibers, and carbohydrates, making it an excellent choice for livestock feed. Its high protein content promotes healthy growth and milk production in animals, while the fiber aids in efficient digestion and overall gut health.

Its deep and extensive root system helps improve soil structure, enhance water infiltration, and prevent soil erosion. Bighorn is an asset for farmers, ranchers, and land managers seeking sustainable and productive grassland ecosystems.

Suited well for...

- ✓ Vineyards
- ✓ Orchards
- ✓ Dairies - that need additional help with their overall nutrient management plan.

WWW.AGRIFORSEEDS.COM

Daikon Radish is a cool season annual, ideally suited for mixes with other cover crop species. As the radish decomposes, it will release a sulfur smell similar to propane. Daikon radish will help control several nematode species, and its large taproot is the ultimate bio driller to break compactions and increase water infiltration. The large taproot enables radish to retain a substantial amount of micro- and macronutrients that are prone to leaching during the fallow winter.

Cover Crop

Mustard is a cool season spring annual and is vital when it comes to protecting water quality and improving soil fertility. Mustard has shown promise in biological pest control such as weed suppression, attraction of beneficial insects and as a biofumigant. It has deep taproots that can extend 1-3 feet below the soil surface and in dry conditions the roots may grow up to 5 feet seeking water. It quickly germinates and will reach maturity between 80 to 95 days depending on variety. Mustard should be chopped or mowed prior to or at flowering and immediately be incorporated into the moist soil while it is still green.

Established in mid to late summer, purple top turnips are used for grazing early fall into late winter. Turnips mixed with annual ryegrass and other cereal grains make a good fall feed when broadcast into corn or soybeans before harvest. The turnip tops and bulbs are both edible, highly digestible and a good source of sulfur. Purple top turnips should not be overseeded in excess of 2 lbs/ac in mixes.

This product is a legume that is widely used by growers as a winter cover crop. Hairy vetch is very winter hardy and can fixates nitrogen. Cover crop users often plant hairy vetch seeds as an alternative to rotating crops in small growing areas. Sow in late summer to establish a stand before the ground freezes, and it will survive ordinary winters in the North to re-grow vigorously next spring. Turn in a few weeks before spring planting. It benefits from having a companion grain like rye or oats planted with it to protect it through the winter and provide support for vines in the spring.

This is the small seeded variety of *Vicia fava* used for cover crops. Fava beans are an annual used mainly as a plow down to build organic matter and add nitrogen to the soil. Fava beans have strong stems to support their upright growth (3-7 feet tall), which also act to support other legumes when they are mixed together. Fava beans have a thick tap root which can help to loosen heavy soils.

This forage pea is highly palatable and performs well in various climates. Max peas are well suited for covering crops and has superior agronomics and great root penetration. Max pea is a high quality smooth green pea with a dimple similar to Columbian but with optimum height and stronger yield capability.

Max has the best seedling vigor and quickest establishment of any semi-leafless green pea on the market in North America. Max also is one of the best stress tolerant varieties with a strong bleach resistance. The market strength for Max comes in the canning and whole pea market and is in high demand. (Regions Grown: PNW, Central MT)

This product is a stand-up semi-leafless pea with high pod set to help harvestability. It works well as a split yellow pea, but an off colored seed coat makes it less adapted to the whole yellow market. Greenhawk seed size is not as large as traditional spring yellow peas but is closer in size than any other winter variety on the market.

Planting rates on Greenhawk will run around 120 lbs. per acre. This is partially because of the smaller seed size when compared to spring peas but mostly because of the very strong stouling capability of winter peas. This means that planting less seeds per acre than spring peas can still produce very adequate stands.

Cover Crop

Wildlife mixtures are composed of various annual and perennial plants that offer a wide range of essential nutrients needed for deer to thrive. These include protein-rich legumes, high-energy grains such as oats and triticale, and other plants that ensure a continuous supply of edible vegetation throughout the year. These mixtures are carefully selected to provide the necessary nutrients that attract deer to a specific area for hunting or wildlife observation purposes.

Kings Court Tall Fescue is a popular choice for homeowners and landscapers looking for a lush, durable, and low-maintenance lawn. One of the standout features of Kings Court is its adaptability to a wide range of climates. Whether you live in a hot and dry region or a cool and humid one, this grass variety can thrive in various conditions. It has good drought tolerance, allowing it to retain its green color even during periods of water scarcity. Kings Court requires minimal maintenance compared to other grass types. It has a deep root system that helps it access nutrients and moisture from the soil, reducing the need for frequent watering. Kings Court is an excellent choice for adaptability, and aesthetic appeal, this grass variety continues to be a popular option for both residential and commercial landscapes.

Sun-Best Annual Ryegrass is used throughout the United States and is a fast-growing short-lived grass used to support both northern and southern lawns. It establishes quickly and is commonly used to stabilize new planting and bring fast color to new lawns. Lawn owners will plant Sun-Best for winter color when warm season grasses go dormant in the fall. Annual ryegrass is a cool-season grass that will peak in growth during spring and fall.

Sun-Best is popular for erosion-prone slopes and high traffic areas like athletic fields or yards with active kids and pets. For best results plant in areas that receive at least six to eight hours of full sun. Depending on your lawn goals and locations, Sun-Best annual ryegrass may be the perfect solution for you.
