

Established in mid to late summer, purple top turnips are used for grazing early fall into late winter. Turnips mixed with annual ryegrass and other cereal grains make a good fall feed when broadcast into corn or soybeans before harvest. The turnip tops and bulbs are both edible, highly digestible and a good source of sulfur. Purple top turnips should not be overseeded in excess of 2 lbs/ac in mixes.

INNOVATION

PLANTING ZONES

PLANTING TIMES

• Spring

PLANTING RATES

- Drilling / 1-3 lbs per acre
- Broadcast / 1.1 -3.3 lbs. per acre

PRODUCT BENEFITS

- ✓ Source of Nitrogen
- ✓ Great Soil Penetration
- ✓ Easy Transition
- ✓ Great for Green Manure
- ✓ Rebuilds Soil
- ✓ Weed control

Soil & Moisture:

Adaptable to a wide range of soil types and conditions. For maximum yield and quality results we recommend irrigation and a good fertility plan with your trusted agronomist.
