# RADAR DETECTION SYSTEM

Radar Detection System Model: TMV-BRS04-KIT

Top Mobile Vision Radar Detection System is a reliable radar of advance microwave technology applied for heavy duty equipment and commercial vehicles, which can provide visual and audible alerts to operators to avoid potential danger and allow them to take proper actions in advance.

## APPLICATIONS:

- Trucking • Waste Fleet • Logistics
- Construction • Mining • Bus
- Agriculture • Utility

8.0mm Diameter Video Cable (Available)

## RADAR FEATURES:

- Single sensor operation.
- Advanced microwave sensing technology.
- Automatically activated when the driver shifts vehicle into reverse status.
- The device is capable of visualizing the radar-zones on the display. As soon as an object enters the detection zone it will activate a transparent colored visualization alert in the monitor to make the driver aware of the potential danger. (Green - Far, Yellow - Middle, Red - Close).
- Detect moving objects including any transportation vehicles, motorcycles, bicycles, pedestrians, etc.
- Work effectively in harsh environment and in poor visibility including darkness, smoke, fog and dust.

## ALERTS DESCRIPTION:

The system provides the operator both visual and audible indications of a detected object. As soon as an object enters the zone it will activate a transparent visualization to make the operator aware of the potential danger. Distance to the detected object is displayed with five colored zones on monitor.

The buzzer can provide an audible alert through "Beep" that will increase in rate as an object becomes closer, alerting the operator that an object is being detected. The monitor's internal buzzer can provide an audible alert.
