

OpenAsbestos

OpenAsbestos® is an open, collaborative, not-for-profit initiative for the asbestos industry.

Based on web standards and commonly agreed data exchange formats, OpenAsbestos® enables software systems to exchange asbestos-related data and documents safely and securely for the common good.

For more information or to find out how to make your systems OpenAsbestos compliant, please contact:

Supporting organisations

1.

HOW DO I GET INVOLVED?

Contact Robin Bennett:
robin.bennett@start-software.com
We welcome applications for new Steering Board members and organisations wishing to experiment with the API.

DOES OPENASBESTOS® MAKE *ALL* ASBESTOS DATA AVAILABLE TO ALL INTERESTED PARTIES?

Absolutely not! The duty holder will always need to confirm that they want their asbestos data to be available via the OpenAsbestos® platform.

2.

3.

WHAT INFORMATION DOES OPENASBESTOS® STORE?

Very little. OpenAsbestos® acts as a gateway, not a store of information. It has been designed to make live asbestos data available to people who need it, wherever the information is stored.

“ OpenAsbestos has the potential to make millions of live asbestos registers available to UKNAR and others – no matter which system the data is stored in.

It is a game-changing idea and one we wholeheartedly support.”

Andrew Paten
Co-Founder, UK National Asbestos Register
