## HEATPUMPS & REFRIGERATION

## Service & Maintenance

Regular servicing ensures your heat pump system is running efficiently and can help prevent expensive breakdowns such as water leaks. Not only does servicing help keep running costs down, it can also extend the life of your unit! We can service all types of single and multi-split heat pump systems including Hi Walls, Floor consoles and Ducted system.

Our professional servicing includes:

- Cleaning and disinfecting of system casing, filters and coils
- Removal of dust, bacteria and allergens from internal fan
- Clearing of drain blockages
- Water leak tests and condensate pump tests
- Check pipe connections and refrigerant gas levels
- Check air off temperature for heating and cooling
- Check function of fan speeds and Louvre blades
- Cleaning and disinfecting of outdoor unit
- Checking pipe exits are sealed and waterproofed
- Removing obstructions to outdoor unit air flow

*Heat pumps are an investment, so to keep them in tip top shape they should be serviced at least once a year.*

Our cleaning sprays remove the build up of nasty allergens, mould, viruses and pneumonia bacterias, whilst being kind to the environment.

*“What an amazing company and service. I thought my heat pump was dead until Kye breathed life into it!...” Tim*
