improve it

General practice carbon calculator

A practical calculator for general practices

[Start Calculation >](#)

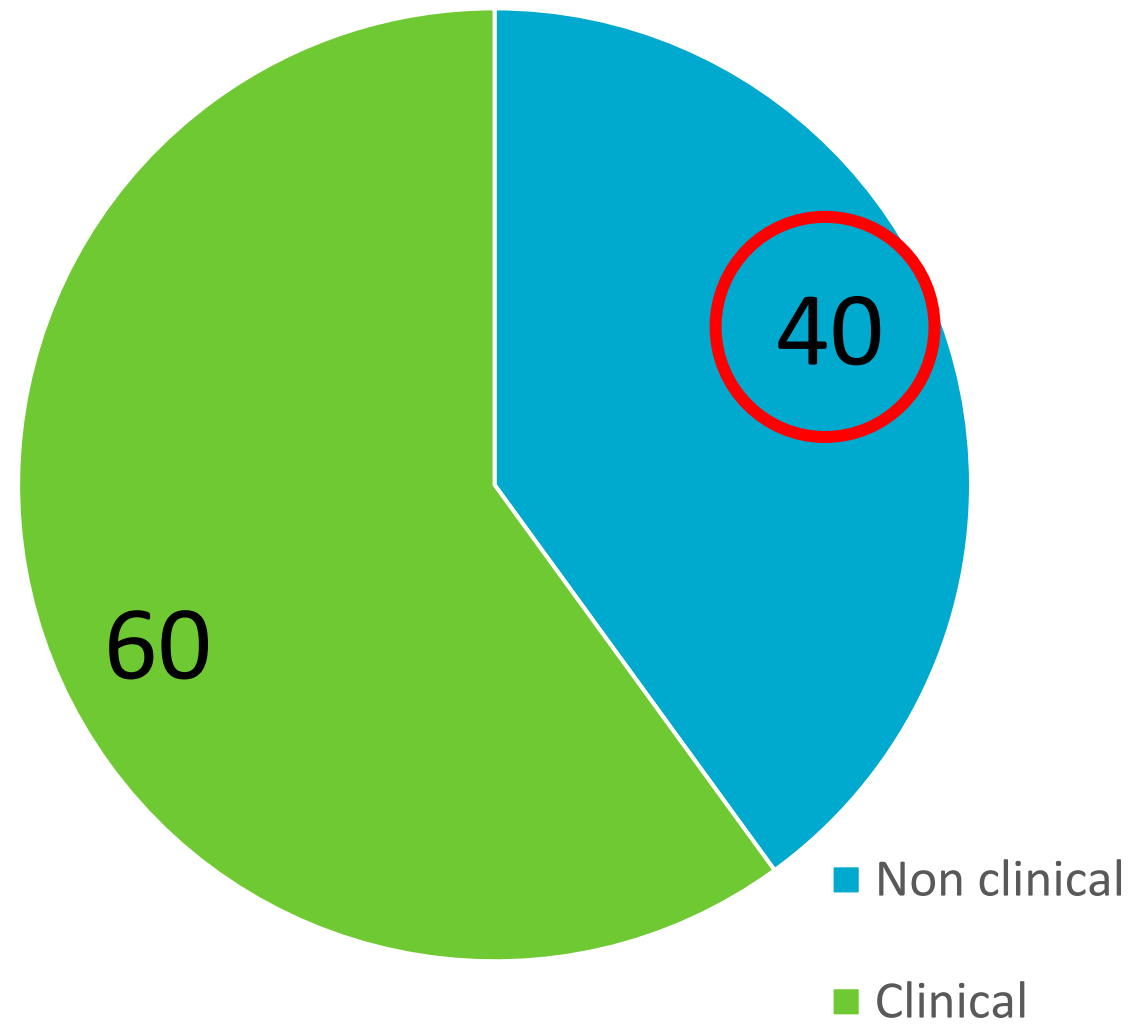

Non clinical

- Energy
- Staff travel
- Patient travel
- Services
- Medical supplies
- Office supplies

Clinical

- Pharmaceuticals, prescribing and inhalers

How

General practice specific calculator

Covers non-clinical emission hotspots:

- Energy
- Travel (Staff and Patient)
- Business services
- Procurement (Office and medical equipment and consumables)

Greater level of data entry => more accurate result

Database

Data on services and goods purchased from practices.

Used multiple online data sources including:

- UK Government GHG factors
- ICE directory
- EcoInvent database
- ERM
- HESCET
- Doconomy 2030 product calculator
- Carbon Trust
- Mike Berners-Lee
- Individual research papers
- Trade bodies

Quote from a GP

“

I think it's fantastic.

I must admit that I have been stuck trying to work out my practice's carbon footprint for the last year or two as I seem to keep hitting brick walls. Every now and again I try for another time, and then give up, so this is definitely a very helpful tool that I think all practices could use.

I really like the way you have broken it down into manageable steps.

I would love it to become something that CCGs commission from you and ask all practices to do once a year so they could finally see where savings could be made ”
