

HENPICKED

Menopause in the Workplace Manager Information Pack

Everyone's experience of menopause is different. We experience different symptoms, have different views or philosophies around how we'd manage them and different medical histories too.

This workbook provides knowledge and understanding around menopause and where to signpost support and help.

Throughout this pack, we sometimes use the terms 'women', 'female' and 'her'. However, we recognise that people from different communities can also experience menopause or symptoms as a result of hormonal changes.

How do we support menopause at work?

Your role as a manager in supporting those experiencing menopause symptoms is crucial. Offering support to colleagues with menopausal symptoms that are impacting on their work will help you to improve your team's morale, retain valuable skills and talent, and reduce sickness absence.

In this guide we will cover:

- The four compelling reasons why employers should be supporting menopause in the workplace:
 - Demographic case
 - Business case
 - Legal case
 - Social responsibility case
- Key menopause facts all managers should be aware of
- Managing menopause - signposting our 3-stage process
- How to have a supportive conversation
- Useful resources

Four compelling reasons

The demographic case

Many women in mid and later life are returning to work or staying in work longer. In fact, women aged 50-64 have been the fastest-growing demographic in the workplace in the UK for decades.

Looking at January-March 2020 compared with the same time period in 1993, their labour market participation had increased by 21.2 percentage points. This is compared with a rise of 12.2 percentage points for men in the same time period. So this is a big demographic at work.

The average age for women to reach menopause in the UK is

51 years

Around

75-80%
of women

of menopausal age are in work

The majority of women are unwilling to disclose menopause-related health problems to line managers, most of whom are men or younger than them

Source: FOM

The business case

There are many associated costs of losing an employee who chooses to leave due to debilitating symptoms.

Assuming they earning £25k - which is lower than the UK average - their departure will cost the organisation over £30,500.

As well as recruitment costs, organisations are also losing a colleague with knowledge and experience, which will take time for their replacement to get up to speed with.

4 compelling reasons

The legal case

The most relevant legislation covering menopause is the Equality Act 2010, which has been the basis of several successful tribunals. The protected characteristics relevant to menopause are age, sex and disability.

We have also had health and safety at work legislation since 1974. This puts a duty of care on employers, and failing to look after those experiencing menopause could be argued as breach of this law. Another good reason to follow best practice in how you support menopause in the workplace.

The social responsibility case

Because it's the right thing to do. Statistics from ITV and the Wellbeing of Women tell us that 25% of women surveyed said they'd considered quitting work, and half said work made their symptoms worse. That's an awful lot of people going through a miserable time.

There is strong evidence that work is a great provider of social support and a source of self esteem. Normalising menopause at work and making it unremarkable is the right thing to do. A key comparator is women who are pregnant or have children, which is an ordinary workplace conversation.

There is growing evidence that normalising menopause in conversation pays dividends. Those who feel supported are happier and more committed and satisfied. This is hard to tangibly measure, but is in evidence in a lot of data.

“

Menopausal women are the
fastest-growing workforce
demographic in the UK

What is the menopause?

Menopause is defined as a biological stage in life that occurs when hormones change and eventually menstruation stops. Usually it is defined as having occurred when someone has not had a period for 12 consecutive months (for those reaching menopause naturally).

Menopause usually occurs between the ages of 45-55. The average menopause age in the UK 51, however it can be earlier naturally or due to surgery, illness or other reasons.

Perimenopause is the time leading up to menopause when an individual may experience changes and menopausal symptoms. This can be years before menopause and, on average, last for 4-8 years.

Postmenopause is the time after menopause has occurred, starting when a period has not occurred for 12 consecutive months and for the rest of their life.

When we talk about menopause in this guidance, we are referring to any of these stages.

What are the symptoms of menopause?

Hormonal changes can result in a wide range of symptoms, both physical and psychological. In research, the ones women have said affect them most at work include:

- Difficulty sleeping, insomnia or fatigue
- Hot flushes during the day or night
- Low mood, depression or changes in mood
- Nervousness, worry or anxiety
- Reduced ability to concentrate or focus
- Problems with memory recall
- Migraines or headaches
- Aches and pains
- Irregular and/or heavy periods
- Urinary issues, e.g. increased frequency

Thinking about long-term health, too

As hormone levels change, extra care of health and wellbeing are important. For example, oestrogen plays a vital role in maintaining good bone, cardiovascular and brain health. After menopause, bone and heart health risks increase.

Menopause: the facts

More than **3 out of 4** women experience menopause symptoms at some time.

But menopause isn't something just women need to know about - we all should be aware too, so we can support colleagues, friends and family.

Did you know?

51 is the average age women reach menopause

1 in 4 women experience serious symptoms

2 in 5 women said their menopause symptoms had been worse than they had expected

8 in 10 women of menopausal age are in work

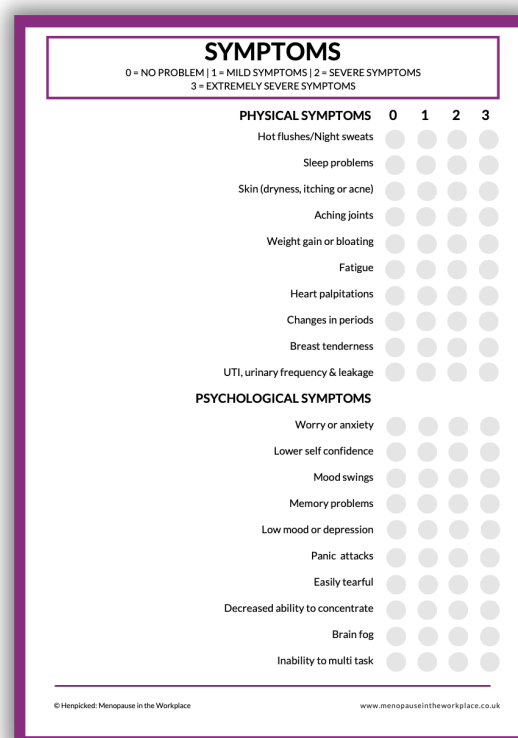

1 in 100 women reach menopause before the age of 40

The majority of women are unwilling to disclose menopause-related health problems to their line managers.

Managing Your Menopause 3-Stage Process

Managing Your Menopause (3-stage process) helps those experiencing menopause understand how they can manage their menopause. Everyone's experience of menopause is different. Everyone experiences different symptoms, has different views or philosophies around how they'd prefer to manage them and different medical histories too.

This workbook is to help anyone experiencing menopause symptoms work out what's right for them, and plan their next steps. As a manager, this can be a useful tool to signpost:

How to have a supportive conversation about menopause

Research tells us that people can find it hard to talk to their manager about menopause. However, your role as manager is to help your team be their best at work. Preparation will help you both. This will result in a much better conversation and outcome for both you and your colleague.

Prepare for your meeting. Check out what support is available in your organisation. Search your organisation's intranet or if there's nothing there, talk to HR.

Book a meeting. Arrange a time to meet, allowing enough time for the conversation. Think about where you are meeting, finding a room which will allow the conversation to be confidential.

Encourage them to speak openly and honestly. Understand how menopause is affecting them at work, what they're doing to manage their menopause and what you as their manager could do to help. Discuss what support they would like e.g. workplace adjustments and timescales. Just knowing someone understands and is there to listen can help and is so important.

Agree with your colleague what you can both do. If you need to, take time to find out information and seek advice.

Do they want the conversation to be confidential? Some of us are happy talking about menopause openly, others are not. Talk to your colleague about whether you want the conversation to be kept confidential or if they're happy to discuss it with colleagues. It's their choice.

Follow up. At the end of the meeting put a time in the diary to meet again, whether that's to agree a way forward, to monitor progress or update. Menopause symptoms can change over time.

Above all, it's in both your best interests to find a good solution. All anyone wants is for your team to be fit and well to enable them to do their job to the best of their ability.

Top Tips

We encourage you to ...

- Ask how you can best help
- Talk supportively about menopause
- Encourage your colleague to talk to their healthcare practitioner about menopause
- Follow your process
- Keep an open mind and be flexible
- Provide support and focus on the solution
- Refer to HR and Occupational Health, if needed

We encourage you to avoid ...

- Making assumptions
- Shying away from talking about menopause
- Sharing personal information without consent
- Addressing performance without checking health issues
- Giving medical advice but do suggest relevant support
