

**Paper:** On the Matter of the “Immune System”

**Date:** 08 Dec. 2022 (rev. 26 Sep. 2024)

**By:** D. R. Shearer

**Topic:** The claim of this paper is that the use of such words like “immune system” is at the *least* a misrepresentation of the fundamentals of [all] biology, and at *worst*, an outright falsehood. As evidence emerges that we have been led by massively financed propaganda, and an infiltrated academic system (the Rockefeller drug ideology cartel), re-definitions of our lives are inclined to also emerge.

### **Introduction**

The general tendency, by way of programming, that we as humans need to **‘fight’** everything that is around us and, in our bodies, is a grossly ridiculous concept. Additionally, in order to go against this programming (which has been demonstrated to be difficult) one must *go against their intuition* as well. This is shown in the vast number of cases of PTSD, where humanity has been programmed (for profit) to go to another continent and start killing those that are there. The folks involved in such behaviour are innocent victims up until such point as their intuition screams at them to **not** put a bullet in another human, that they have never met before. This is the crux of the problem before us all now (ignoring intuition/ethics/morals) and at the same time, the very solution to the problem before us all now (**return** to intuition/love/ethics/morals/integrity).

Included in the list of things we use to “fight” our environments, but not limited to, are:

- 1) Pesticides,
- 2) Herbicides,
- 3) Antibiotics, antifungals, antimicrobials, antivirals, etc.,
- 4) All wars (see refs. #1) (quick healing [ptsd] comes from this understanding: David Straight)
- 5) A vast number of household disinfectants & chemicals
- 6) Insecticides.

## **Scope**

Further to the notation above, information emerging since 2020, suggests heavily that we look at the information between the concepts “infectious contagion” vs. “bioresonance” (the ‘Terrain’ Model).

Important here, is to see the matter from evidential proof, and how it has affected the human (collective & individual) psyche. Summarily, you have a 158-year perpetuated falsehood by way of propaganda, creating an almost unreal, dark cloud of **fear** syndrome (of a particle unseen) vs. a comprehensive understanding of how all biology functions, to continually & consistently move to homeostasis, in an intelligent and unrelenting biologic function (as seen by micro graphs).

The fact that money has been used to *create* false fear & profit for a segment of our population, is and has been, generally, to the detriment of greater society. A few points here:

- 1) This unfortunate ‘detriment’ does not affect all, and is governed by such things as karmic predisposition, intentional awareness, inherent or developed intuition, the presence of spirit guides and/or human assistance & intercession, etc..
- 2) The massive emergence of Truth existing over the past 54 months, is a clear indication of the end of *predation* on the planet, and the dawning of a new age, known as being “Settled in Light & Life” (aka the Great Awakening; aka establishing the “Kingdom of Heaven on Earth”).

## **On the Matter of the Immune System**

From the preceding introduction, suspicions should immediately arise, even when one has never considered the matter, that the implied ‘fight’ connotation to the understanding of the ‘immune system’, may be due to ulterior motives. Here is a mock up conversation to illustrate the falsehood of what is an “immune system” (backed up by the references, of course):

**Truth Seeker:** So, you claim to have a strong immune system?

**Claimant:** Yup.

**TS:** How do you know this and why do you need one?

**C:** I take my mega-dose vita C, zinc, Cold FX & Ener C, of course, to fight off the many infections as illustrated in the popular magazines, over the past 3 decades or so.

**TS:** Ok, so you are ‘fighting’ the multitude of ‘viruses’ stretching back to HIV, back to Smallpox and back to “Horsegrease Cowpox” in the 1700’s, correct?

**C:** Yup, except I have never heard of “Horsegrease Cowpox” (Jenner) so I’m pretty sure we are safe from that one! And I know Smallpox is coming back!

**TS:** Alright. Except, evidential proof, by way registration into the French Academy of Sciences, in 1866, shows clearly that pathogenic ‘microbes’ **do not** occupy normal air. i.e. the made-up words “microbes” & “viruses” **do not** exist.

**C:** Oh. Well then, I know, that I am ‘fighting’ a vast array of bacteria. You know there is a vast array of bacteria, don’t you?

**TS:** Yes, I know that there are bacteria living in our environment and that are endogenous to our own bodies. The only problem is, also in 1866, it was conclusively proven with a piece of meat in the lab, *that was completely isolated from Pasteur’s supposed outside ‘microbes’*, that bacteria still formed. This was shown all the way to the centre of the sample, which proves that bacteria were always, *potentially available*, in the piece of meat. Additionally, since 1942, micrographs have shown completely, the 16 Stage Life-Cycle of the Somatid, and the 8 various forms of bacteria that it produces. This is an inherent process, generated within our biology (and all biology), as part of the beneficial mechanistic process to maintain homeostasis for the host.

**C:** Oh. Then I am sure that I am fighting a variety of yeasts and fungi.

**TS:** Well, actually the same research and micrographs have produced the evidence that the last 5 cycles of the 16 Stage Somatid Life-Cycle produces a yeast stage and 4 stages of fungi, all part of the pleomorphic characteristics of the Somatid itself.

**C:** Oh. Well then, I am fighting the 80 to 130,000 (depending upon which list is referred to) incidences of chemicals within our environment and in our food products and the ever-incessant increase in Electromagnetic Frequency Radiation (EMR), that plagues us all, mostly without our consent.

**TS:** I agree with you here. But why don’t you do your best to remove these things from your life, many of which are easily researched and/or obvious, rather than continually burdening your thought processes by thinking that your physiology has to have to ‘fight’ these things?

### Conclusion

When I got:

- a massive overgrowth of yeast, with every repeat doses of antibiotics, 45 years ago, and

- a 3-day headache from taking one of the first doses of aspartame in a soft drink, 38 years ago, and
- a 'feeling' in the chest and was urged to find out that canola oil can produce heart lesions, about 25 years ago, and
- a night-long headache from eating a few slices of non-organic dried pear in the evening, about 3 years ago, and
- a heart palpitation (cardiac arrhythmia), about 2 years ago, and removed it (within one week), along with the cause (cell phone - see refs.), and
- another all night and next day headache from eating just one apple, about 4 weeks ago,

...I removed these things from my life permanently. Also, I considered myself fortunate, even though these processes created a significant level of distrust, in my life. Fortunate because my own biological response has guided me.

While maybe not everyone has inbuilt radar to detect particular toxins, the current time is one where the emergence of Truth will benefit all, as all humanity will eventually see the falsehood for what it is, and we unite to protect each other, as per item 2), above.

This paper is not intended to criticize, but rather to see that we are all in this together, and that maybe pursuing Truth together is the best approach.

The references listed is for anyone who may not have come across the material, and who may wish to get a jump on the process.

What follows is a description of the Macro-cycle (the last 13 stages of the Somatid Cycle) after the somatid was triggered by toxic influences:

4. Bacterial - round ended tubes (endogenous); the first emergence of the macro-cycle when blood inhibitors have been diminished; first noticed by Germany's von Brehmer (1930's).
5. Double Bacterial - either bent rounded or sharp articulated (bulbous ends); often seen in blood smears (allopathic); divides by scissiparity (reproduction by fission).
6. Rod - Looks like bacterial but longer and its cytoplasm (substance between the cell wall & the nucleus) seems empty.
7. Bacterial with Double Spores - Possesses 2 terminal spores.
8. Bacterial with Granulated Double Spores - Possesses a cytoplasm with granulations that begin to move.
9. Mycobacterial - Self-developing cytoplasm; this stage well known to microbiologists.
10. Mycobacterial with Bubbles - Advanced to include 'bubble-like enclaves'.
11. Bursting of the Mycobacterial - Releases cytoplasm into the medium.

12. Yeast-like Forms - Result from the bursting of the Bubble Mycobacteria and have a diameter of 4-5 microns; even at this stage they give evidence of a centrosome [a small region near the nucleus in the cell cytoplasm, containing the centrioles].

13. Ascospore [Ascus] - Yeast-like formations proliferate and become ascospore forms; precursors of mycelial (fungal) elements.

14. Early Mycelial Form - From the Ascus form we can observe the formation of a Thallus in which the cytoplasm gradually takes shape to constitute the Young Mycelial Form

15. Adult Mycelial Form - It is through a conjuncture and with peristaltic movements (muscular contractions that move along internal features) that the young mycelial form develops a thallic cytoplasm and eventually becomes an adult mycelial form [shown 30,000X resolution].

16. End of Cycle [Bursting Mycelium] - When this Mycelial element reaches full maturity, its cytoplasm becomes extremely active; when it bursts, it releases an enormous quantity of new particles into the medium, each particle capable of repeating the entire cycle.

Fibrous Thallus (waste) - Emptied of its cytoplasm, the Thallus has a fibrous appearance; incidentally, it is this residue, from the Somatidian Cycle, that is often observed in blood smears and is *dismissed as an artifact of coloration*.

It must be underlined that these forms of mycelial characteristics do not answer to any of the criteria of fungal growth. In fact, they are not affected by massive doses of amphotericin B, fungizone or any other anti-fungal substance.

The preceding observations lead to a series of postulations:

- 1) The Somatid is endowed with polymorphism - a polymorphism controlled by blood inhibitors.
- 2) Growth hormones are generated by the Somatidian Cycle [trephone - Micro-cycle].
- 3) In both the animal and plant kingdoms, cellular division requires the presence of the Somatid.
- 4) When blood inhibitors are lacking, growth hormones are allowed to increase until they threaten cellular metabolism.
- 5) All degenerative diseases are a consequence of this disorder.

# Somatidian Cycle as seen in blood
