

WOMEN IN Computer Science

2022-2023

What is Women in Computer Science Club?

Women in Computer Science (WiCS) is a club that focuses on empowering young women interested in the field of computer science. Right now, only 25% of computing jobs are held by women, and only 19% have computing degrees. Our mission is to help break the gender gap in computer science by mentoring and informing young women at Green Hope High about programming languages like Javascript, inspire them by bringing guest speakers to share their experiences, help them participate in service projects using their coding skills, and other enjoyable activities that get exposed to the profound world of computing.

What are we going to be doing?

Every two weeks, we will meet in Ms. Patton's room and go over a computer science topic, through a game or a coding project.

We will also try to have some guest speakers come in, to talk to us about their experience in the CS field.

Community Service

The top corners of the slide feature decorative wavy lines composed of many thin, overlapping lines in shades of blue and purple, creating a sense of motion and depth.

Opportunities:

- Mentorship program
- Career Panel
- In person workshops
- STEM News
- Computers with Causes
