- Please avoid recommendations from social media, your certified SL locitian is your best resource.
- Stay positive-it's a vibe. Trust the process...your hair will thrive 😊

General FAQ for Beginners

Q: What is Sisterlocks (SL)?

A: SL is a **natural hair management system** that creates tiny style-able locs. It allows women with tightly textured hair to take advantage of a wide range of today's hairstyles without having to alter the natural texture of their hair or add any products or heat.

Hairstyle **involves creating small/uniform-sized locs**, using a specific locking technique. This technique is often called the “interlocking method,” where the hair is woven together using a small tool designed by Dr Cornwell (the inventor of SL).

These locs are typically **smaller than traditional** locs & can be styled in a variety of ways, as they are light weight, versatile, low maintenance, and unique to every individual.

SL is unique to our culture bc you **must have a curl pattern to have the locs** installed & stay in place. They have gained popularity over the yrs. for their unique & appealing aesthetic.

Q: Do I need to have 'fine' hair for Sisterlocks to work?

A: Not at all! In fact, the coarse, thick 'nappy' hair is best for SL. Your natural abundant texture adds body & makes styling easier.

Q: Will Sisterlocks cause my hair to break or thin?

A: Just the opposite! SL is a gentle technique that requires no chemicals, no excessive tightening, & causes no damaging abrasion to the hair or scalp. You will find that with regular care, your locs will grow and grow, and your styling options will increase.

Q: Can I do the locs myself?

A: This is not advised. Not all hair types require the same locking technique. Your hair care professional is the best trained to give you locks that will be best suited for you.
