

# Signal-Wise: we get the signal right

## X-tractor

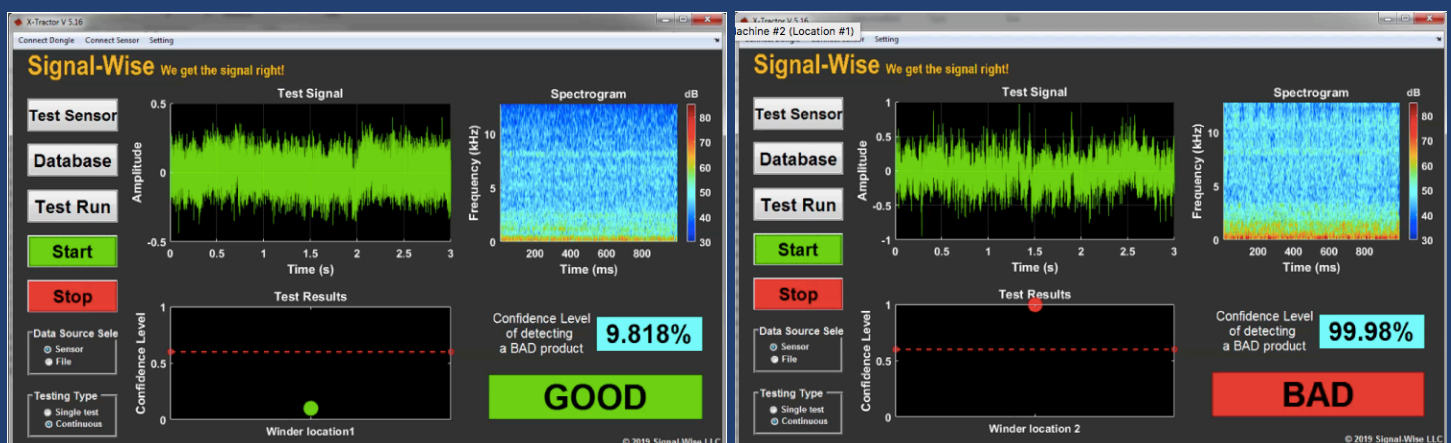

### QC Testing for Textile Winders

X-tractor enables one to perform in-line and end-of-line QC testing on a factory floor.

Random background noise and interfering signal levels on a factory floor can be very high.

A typical textile factory floor on which winders are lined up one to another at very close distances.

X-tractor enables one to detect a defective product on an assembly line in real time, where the background noise levels on a typical textile factory floor is extremely high.
