ANSWERS TO ALL EXERCISES ARE INCLUDED AT THE END OF THIS PAGE

While the emphasis in graphing thus far has been on **linear graphs**, by now you must certainly be aware that not all graphs are straight lines. Non-linear graphing begins in this section with simple point-plotting, followed by a search for insights and patterns to make the graphing easier and faster.

1. One of the simplest equations is the parabola $Y = X^2$. Complete the following table, and plot the points on the graph. The point $(0,0)$ is called the **vertex** of the parabola.

X	Y
0	
1	
2	
3	
-1	
-2	
-3	

2. Complete the table and graph the equation $Y = X^2 + 4$.

X	Y
0	
1	
2	
-1	
-2	

3. Next complete the table and graph the equation $Y = X^2 - 4$.

X	Y
0	
1	
2	
3	
-1	
-2	
-3	

The correct graphs for these equations and the **vertices** (plural for vertex) are given and discussed below.

1. $Y = X^2$

2. $Y = X^2 + 4$

3. $Y = X^2 - 4$

How do the graphs of $Y = X^2 + 4$ and $Y = X^2 - 4$ compare to the graph of $Y = X^2$? Did you notice that the "+4" just moves the graph up 4 units, and the "-4" moves the graph down 4 units? Except for the position of the graphs, these are all really the "same" graph.

Now complete the tables and graph the equations:

4. $Y = (X-2)^2$

5. $Y = (X+2)^2$

X	Y
0	
1	
2	
3	
4	

X	Y
-4	
-3	
-2	
-1	
0	
1	

Before turning the page to see the correct graphs of these equations, compare the graphs of $Y = (X-2)^2$ and $Y = (X+2)^2$ to the graph of $Y = X^2$. Can you speculate about the effect of the "X-2" and the "X+2" on the graphs of these equations?

6. Complete the following statements:

- a. The graph $Y = X^2 + 4$ is shifted _____.
- b. The graph $Y = X^2 - 4$ is shifted _____.
- c. The graph $Y = (X-2)^2$ is shifted _____.
- d. The graph $Y = (X+2)^2$ is shifted _____.
- e. The graph $Y = (X-2)^2 + 4$ is shifted _____ and _____.
- f. The graph $Y = (X+2)^2 - 4$ is shifted _____ and _____.

The correct graphs of $Y = (X-2)^2$ and $Y = (X+2)^2$ are as follows:

The principles you have discovered thus far, which involve shifting a known graph either up, down, right, left, or any combination of these, are called **translations** of the graphs. Using these principles, graph each of the following without plotting any points except the vertices:

7. $Y = X^2 - 2$

8. $Y = X^2 + 3$

9. $Y = (X+3)^2$

10. $Y = (X-1)^2$

11. $Y = X^2 + 1$

12. $Y = (X+1)^2$

13. $Y = (X-2)^2$

14. $Y = (X+2)^2 - 4$

15. $Y = (X+2)^2 + 4$

16. $Y = (X-2)^2 - 4$

17. $Y = (X+4)^2 - 2$

18. $Y = (X-4)^2 + 2$

19. What do you think the graph would look like if the coefficient of X^2 is negative? (The negative coefficient is not squared!) Complete the table for $Y = -X^2$ and then draw the graph.

X	Y
---	---

Graph the following parabolas by translating the graph of $Y = -X^2$ up, down, right, left, or appropriate combination thereof.

20. $Y = -X^2 + 4$

21. $Y = -X^2 + 2$

22. $Y = -X^2 - 4$

23. $Y = -(X+3)^2$

24. $Y = -(X-1)^2$

25. $Y = -(X-2)^2$

26. $Y = -(X+1)^2$

27. $Y = -(X-2)^2 + 4$

28. $Y = -(X+2)^2 - 4$

29. $Y = -(X+2)^2 + 4$

30. $Y = -(X-2)^2 - 4$

31. $Y = -(X+4)^2 - 2$

32. In general, the equation $Y = (X-h)^2 + k$ represents a
a) _____ that opens b) _____, with vertex at c) _____.
 $Y = -(X-h)^2 + k$ opens d) _____, with vertex at e) _____.

The technique of graphing by translation may be applied to any type of graph. For example, given the graphs of $Y = \sqrt{X}$, $Y = \sqrt[3]{X}$, and $Y = |X|$, use these graphs to sketch each of the following:

$$Y = \sqrt{X}$$

$$Y = \sqrt[3]{X}$$

$$Y = |X|$$

33. $Y = \sqrt{X} + 2$

34. $Y = \sqrt{X + 2}$

35. $Y = -\sqrt{X}$

36. $Y = \sqrt[3]{X} - 2$

37. $Y = \sqrt[3]{X - 2}$

38. $Y = -\sqrt[3]{X}$

39. $Y = |X + 2|$

40. $Y = |X + 2| + 2$

41. $Y = -|X - 2|$

42. $Y = -\sqrt{X - 2}$

43. $Y = -\sqrt[3]{X - 2}$

44. $Y = -|X| + 2$

45. $Y = -\sqrt{X - 2} + 2$

46. $Y = -\sqrt[3]{X - 2} + 2$

47. $Y = -|X - 2| + 2$

2.02 p. 212-218:

- 6a) Up 4
 b) Down 4
 c) Right 2
 d) Left 2
 e) Up 4, right 2
 f) Down 4, left 2

2.02 p. 212-218:

17. $y = (x+4)^2 - 2$

18. $y = (x-4)^2 + 2$

19. $y = -x^2$

20. $y = -x^2 + 4$

21. $y = -x^2 + 2$

22. $y = -x^2 - 4$

23. $y = -(x+3)^2$

24. $y = -(x-1)^2$

25. $y = -(x-2)^2$

26. $y = -(x+1)^2$

27. $y = -(x-2)^2 + 4$

28. $y = -(x+2)^2 - 4$

29. $y = -(x+2)^2 + 4$

30. $y = -(x-2)^2 - 4$

31. $y = -(x+4)^2 - 2$

32 a) Parabola

- b) up
- c) (h, k)
- d) down
- e) (h, k)

2.02 p.212-218:

33. $y = \sqrt{x} + 2$

34. $y = \sqrt{x+2}$

35. $y = -\sqrt{x}$

36. $y = \sqrt[3]{x} - 2$

37. $y = \sqrt[3]{x-2}$

38. $y = -\sqrt[3]{x}$

39. $y = |x+2|$

40. $y = |x+2| + 2$

41. $y = -|x-2|$

42. $y = -\sqrt{x-2}$

43. $y = -\sqrt[3]{x-2}$

44. $y = -|x| + 2$

45. $y = -\sqrt{x-2} + 2$

46. $y = -\sqrt[3]{x-2} + 2$

47. $y = -|x-2| + 2$
