Unlock the full potential of Generative AI at work

AI and the transformation of work

Artificial intelligence has become so common in everyday life that it's often not given a second thought. However, the rise of generative AI (GenAI) has forced organizations to explore the benefits and drawbacks of a new technology. It has also compelled these businesses to consider how best to use it as the pace of innovation, competition, and modern work intensifies.

What is the difference between AI and GenAI?

AI applies advanced analysis and logic-based techniques to interpret events and automate decisions. GenAI, a subset of AI, extracts more value for businesses by leveraging large data sets to generate new content, such as text, images, audio, video, synthetic data and software code.

WHAT'S HAPPENING NOW

PCs and workstations infused with GenAI

With GenAI, a richer, more nuanced way of working awaits us as command-and-control functionality moves toward collaboration, co-creation and personalized human/machine interactions.

Personal Computers

PCs infused with AI are making their way into the workforce as companies seek ways to inspire performance, streamline workflows, tighten security and speed time to market. From a practical standpoint, they're running apps faster, blocking background noise and extending PC battery life.

Workstations

Workstations are the entry point into AI development. They enable AI scientists and developers to tap into vast and diverse datasets, robust compute capacity, deep learning techniques and other technological advances to improve business performance and speed innovation.

The potential to transform businesses across industries

Business and IT leaders are just starting to take advantage of GenAI's many benefits, including heightened productivity, cost reduction, innovation, and customer satisfaction. GenAI makes PCs and workstations more intelligent, self-aware and user aware, empowering organizations in any economic segment to:

- ✓ Boost performance
- ✓ Enhance productivity with automation
- ✓ Develop with agility
- ✓ Secure data and stop threats
- ✓ Improve customer interactions
- ✓ Speed digital transformation
