CN: Cannabinoid Profile & Potency (WJ-10-17 & WJ-10-17-01) Analyte: *THC* Test Date: 12/11/2019

The client sample was analyzed for plant-based cannabinoids by Liquid Chromatography (LC). The collected data was compared to data collected for certified reference standards at known concentrations.

Ratio of Total CBD to THC: 30.1:1 Limit of Quantitation (LOQ) = 0.007 wt%

Max THC and Max CBD are calculated values for total cannabinoids after heating, assuming complete decarboxylation of the seed to the neutral form. It is calculated based on the weight loss of the seed during decarboxylation. Max THC = (wT) / (THC to THC). This calculation does not include other cannabinoid systems (eg. DB-THC and exo-THC, ND) = None detected above the limits of detection (LOD), which is half of LOQ.

UNRIVALED QUALITY STANDARDS

- Our hemp products are certified organic and pure organic genetics for generations.
- Although there is an inconvenience of mixed gender, they remain affordable and optimally healthy avoiding harmful GMO toxins proven to cause pediatric Crohn's, IBS syndromes and cancer.
- Our seeds can be used annually verses having to purchase feminized at very high prices every year.
- Organically harvested and processed oils and extracts are difficult and rare to find, more-so for biomass and edible nutrients.
- Their overall market value and quality will gain momentum as infrastructure and evidence-based science complements their organic genetic profile.

"These seeds were specially grown with love for the discerning organic and environmentally conscious consumer." Not recommended for use with synthetic fertilizers and pesticides.
