

COMPLETIONS SYSTEMS MANUFACTURING PLANT.

We, BAKER HUGHES, have used SERVEC 2 zinc phosphate for approximately 10 years with excellent results.

We use zinc phosphate coated for metal surfaces protection and paint anchoring. This product does not need to use accelerators, or monitor the dissolved iron concentration. Additionally the tank cleaning operation is not frequently needed because it does not generate mud or wastes due to the use of additives by iron saturation.

This saves expenses related to man-hours for tank cleaning as well as chemical investment for setting up the zinc phosphate process.
